Introduction

You are your child's greatest advocate!

When you realise that your child experiences the world in a different way it can feel overwhelming at first. There is no simple check list or magic fix to make life easier, however, once you begin to understand your child's particular way of processing their thoughts, senses and feelings , you will find lots of things that can help, one step at a time. Collectively, this knowledge will help you to provide the support that your child needs. A diagnosis can bring clarity—but it doesn't always lead to the professional help that your child needs. The truth is, you shouldn't need a diagnosis to ask for help. Whether you have one, are still waiting, or have chosen not to pursue one at all—you and your child still deserve support.

We are a group of parents at various stages on this same journey. We were desperate for guidance and didn't know where to look to find what we needed. Lots of information is available, but finding the factually correct bits that are relevant to your situation can be hard.

We wanted to share not only our experiences and tips, but also those of other families, who have been where you are now. We have provided an overview of what we have found to be the most relevant information from sources such as the Local Offer, NHS websites, national charities and IPSEA (Independent Provider of Special Education Advice) but we aren't trying to recreate textbooks that are already available.

We don't intend for you to read this whole pack in one go, but dip in and out when each section becomes relevant to your family's situation. Just as every child is unique, every family's experience will be different, but we hope there will be some information here that will help you. Books and websites can provide useful guidance and we have recommended some books, videos and blogs, which are all resources that we have used ourselves. We believe it is equally important to understand the statutory services that are available, and to connect with support groups and other SEND parents, who will understand how you are feeling and provide emotional, as well as practical support.

Thanks to all of the young people, parents and professionals who have provided input.

Good luck on your journey.

**Maggie Cleary (STRM),
Paula Farrow (MyOTAS),

and the Essex Family Forum team**

Section 1

What is Neurodivergence?

Experiencing the world differently

What is Neurodiversity?

Neurodiversity is an umbrella term for all the different ways human beings think and process the world.

What does being Neurodivergent mean?

The majority of people are classed as Neurotypical - people whose brains work differently from the majority are classed as Neurodivergent. It includes a wide range of differences, such as Autism, ADHD, Dyspraxia, OCD, Tourette's Syndrome, Dyslexia, Bi-Polar and Global Development Delay.

We believe that being neurodivergent provides our children with strengths that should be nurtured and challenges that should be effectively supported. Because no two children are the same, all neurodivergent children will experience the world differently. It is important to understand your child's needs and differences so that you can approach things differently. This can help minimise your child's challenges in a neurotypical-centred world. Neurodivergent conditions are dynamic and can change over time and present differently on different days. They may be affected by stress, hormones, environmental factors and lack of proper support.

In the correct environment and with the appropriate support there can be many positives to being neurodivergent:

- ✓ Great attention to detail
- ✓ Creativity
- ✓ Hyper focus
- ✓ Thinking outside the box
- ✓ Analytical thinking
- ✓ Passion for fairness and social justice
- ✓ Acceptance
- ✓ Questioning outdated ideas and ways of doing things

"If you are always trying to be normal, you will never know how amazing you can be." Maya Angelou

A Note on Terminology

The terminology used to describe neurodiversity is changing, driven by the research and writings of neurodivergent adults. As a parent of a neurodivergent child, discussions over the use of language are probably way down on your list of concerns. Still, you may see how some words used to describe your child have subtly negative connotations.

We have used the most up-to-date terminology within this book, favoured by most neurodivergent adults. However, you may come across other people using alternative or outdated terms.

Identity-first language

We have chosen to use identity-first language, such as "autistic child," rather than person-first language like "child with autism." This reflects the view that autism is an intrinsic part of the person, much like having blond hair or being left-handed. Unlike diseases such as cancer or diabetes, autism cannot be cured. Individuals with autism do not "suffer from" autism, nor do they "live with" it in the same sense that one might live with a disease.

Why we shouldn't use 'Mild, Moderate, or Severe impairment'

It is widely recognised that neurodivergent conditions will have dynamic presentations that vary day to day and throughout someone's lifetime. The level of impairment can be affected by, for example, access to a diagnosis, early intervention, reasonable adjustments being made, stress, feeling hungry, lack of sleep, sensory issues etc. You cannot be mildly, moderately or severely diabetic or pregnant; you either are or you are not, and neurodiversity is the same. With individually tailored support everyone can thrive.

Asperger Syndrome (Asperger's)

There is controversy surrounding the term 'Aspergers' and clinicians no longer use it as an official diagnosis. Even so, the term is still used in some circumstances and by some practitioners. The diagnostic term was first used in the 1980s to describe those who are autistic and have a high IQ. It was named after Dr Hans Asperger, a scientist who extensively researched autism in children and referred children to a euthanasia clinic.

People diagnosed with Asperger's (prior to 2013) may continue to identify with the term. Today they would be diagnosed as ASD (Autism Spectrum Disorder).

If you are speaking to neurodivergent individuals, be led by the terminology that they prefer – if in doubt, ask them.

"My ADHD is part of my neurotype, how my brain is wired. It impacts my life in different ways, both good and bad. It influences everything I do."

To understand more about the impact of the words used to describe disabilities please read this excellent blog article by Ann Memmott Ann's Autism Blog: Appropriate Descriptions around Autistic People (<https://annsautism.blogspot.com/2021/07/appropriate-descriptions-around.html>)

**“Some days my
son seems more
autistic than
others.”**

You may notice that the neurodivergent differences your child displays **change from day to day, due to a range of factors** such as how well they have slept, whether they have eaten, general levels of anxiety, etc.

Some days they can cope with situations they may find hard, e.g. loud noises, sitting still, speaking, being in crowded environments, or concentrating - other days they will find these things unmanageable.

Autism

Autism is a lifelong neurological difference that affects how people communicate and interact with others.

Autistic people can experience, interact with, and interpret the world in unique ways differently from neurotypical people. Historically, there was a common misconception that the autistic spectrum is a straight line between low and high functioning. However, every neurodivergent person is an individual and has unique strengths and challenges. This is sometimes referred to as a 'spiky profile', which can be seen on the diagram opposite.

For example, one autistic child might be bursting with creative ideas but struggle with staying organised. Another might be brilliant at maths but find two-way conversations difficult. It's also common for neurodivergent children to be around 3 to 4 years behind their peers in areas like emotional regulation, flexible thinking, or social interaction, even if they're thriving in other areas.

All children mature at their own pace, but for neurodivergent children development doesn't always follow the "typical" timeline. This doesn't mean they're not capable — it just means they're on **their own path**, and given the right environment and support, they can thrive.

"Sometimes I am very proud of who I am because I can prove people wrong who think I can't do things, but the other side is annoying because people can label me as just being 'autistic' and I am much more than that."

This graphic shows that when a person is on the autism spectrum they may demonstrate great strengths in some areas but be lacking in skills in another.

The Autism Spectrum

What people think the autism spectrum looks like:

Less Autistic

More Autistic

An example of what it does look like
(the pattern will be different for each individual)

Autistic people will typically have challenges in some of the following areas:

1. Social Interaction and Communication Differences

They may:

- Find eye contact uncomfortable or even painful and avoid it, or stare at something for a long time if it is really interesting to them.
- Have a language delay, be non-verbal, non-speaking, or situationally mute (where their anxiety is so high in certain situations that they cannot speak). For further information about speech delays and communication difficulties please see the section on Speech and Language).
- Appear very articulate and wise beyond their years (primary school), but may also be naïve and easily led, which creates issues in their teens.
- Prefer clear and direct language. Sarcasm, jokes, and phrases like "I'll be 5 seconds." Can be confusing and taken literally.
- Find it difficult to initiate and maintain friendships.
- Have a strong sense of justice and fair play and become upset if others do not share their ideals.
- Speak in a way that is overly direct.
- Enjoy interacting with objects, imaginary friends or animals, as these can feel safer as there is less pressure to remember/demonstrate social rules.

- Have difficulty reading facial expressions and body language cues correctly and find that neurotypical people misinterpret their expressions too e.g. the child doesn't express the socially acceptable smiling face of gratitude when given a gift.
- Find it hard to understand and express their feelings – often it takes a while (sometimes days) for them to realise that someone said something rude, or sarcastic to them.
- Like routines and feeling in control, which helps them feel safe, though others might sometimes see this as being 'bossy.'
- Speak very honestly and bluntly. They are often the best people to ask for an honest opinion – but don't ask them for their views, if you are actually just fishing for a compliment.
- Prefer playing alongside other children (parallel play) rather than directly with them – which is perfectly okay.

Historically, it was often said that autistic people lack empathy - but it is becoming increasingly accepted that many autistics have an abundance of empathy and feel other people's emotions so acutely that they become overwhelmed. This may sometimes present as an emotional outburst, but on many occasions they may internalise the way they are feeling. You may notice that they avoid emotional scenes and interactions with other people.

"My son runs out of the room whenever the news comes on, as he finds it distressing."

2. Reassuring Routines – Repetitive and Restricted Behaviours

Every child has their own ways of feeling safe and calm. Autistic children often have unique routines, interests, or movements that help them regulate. They may:

- Prefer to have daily routines and may become distressed if the routine is changed.
- Like to strictly follow the rules and get upset if others do not.
- Use repetitive language (scripting or echolalia), copying phrases, tones, or accents they hear as a way of learning and expressing themselves.
- Organise and sort things (systemising), such as lining up toys by colour or arranging objects alphabetically.
- Follow a specific route to school and become stressed if their route or routine is changed.
- Want to wear the same thing every day.
- Perform repetitive movements when stressed or excited, such as rocking, flapping hands, jumping, pacing or spinning (this list is not exhaustive – see the Section on Stimming).
- Want things to be kept in a certain place.
- Try to take control of their environment by cleaning and decluttering.
- Form strong connections with certain objects, textures, or foods (restricted interests or sensory preferences), and may need time to adjust to changes.
- Re-watch favourite shows or videos (repetition for comfort), finding joy and reassurance in knowing what's coming next.

These behaviours may seem strange to you, but they are meaningful, soothing, and can build focus, creativity, and a sense of control for your child.

3. Sensory Processing Differences

Autistic children experience the world differently to neurotypical people and this can be across all their senses. Some may prefer loud noises and others will hate it!

As Sensory Processing is a challenge for so many neurodivergent children, a specialist Occupational Therapist has provided a thorough overview of the difficulties, and suggested some hints and tips, and this information can be found in the Sensory Needs Section.

Sensory difficulties may include:

- Being overly sensitive to loud noises, like hand driers in public toilets, school bells, fire alarms, big crowds.
- New clothes can be itchy, especially the labels.
- Some foods have too much flavour, or some foods are too bland.
- Auditory (sound) processing difficulties can make it difficult to follow conversations and instructions.
- Being touched, tickled or hugged.
- Strong smells.
- Cleaning teeth – due to the taste and how it feels.
- Hair washing and brushing.

4. Intense Interests/Hobbies (sometimes referred to as “Special Interests”)

Your child may have an interest in one subject to the exclusion of everything else.

Many autistic people find their interests hugely enjoyable, therapeutic and rewarding. This intense focus (hyper-focus) can be very useful, as it can be used to help solve problems or find new ways of looking at things, but they can be so absorbed in something that interests them that they forget to undertake self-care, such as remembering to eat or drink!

The interest may be something like dinosaurs, LOL dolls, football, make-up tutorials, or Minecraft; it may be a person, a pet or a cuddly toy, or it might be something more unusual like vacuum cleaners.

They may consider that anything which doesn't include their latest interest is a waste of time and to some other people this may appear rude. You may find that your child loves to talk about their hobby at length. If they do, try to remember how happy it is making them to share their interest with you (even if you don't find the subject interesting) and that they are more likely to “info dump” on people they feel safe with and trust.

Some people may discourage intense interests in neurodivergent children. However, many neurodivergent individuals find their interests to be a source of enrichment and a great way to access learning. Therefore, it is important to embrace and value these interests.

- The benefits of special interests in autism (www.spectrumnews.org/features/deep-dive/the-benefits-of-special-interests-in-autism/)

““My daughter’s special interest is Harry Styles and she is so motivated to learn about him that she has been able to try lots of new things: researching a scrapbook project with facts about him; going on public transport to a concert; and connecting with other fans on social media and making ongoing friendships where they share an interest.”

Masking

It can be difficult to obtain a diagnosis of autism when a child appears sociable, but if you know them well enough you can see how much energy they are having to put into performing to appear “normal”. This is called ‘Masking’.

Some autistic people can socialise incredibly well, but this can be exhausting as it is often learnt behaviour rather than intuitive. Pretending to be something you are not can take up a lot of emotional and physical energy.

How this might affect your child?

Some autistic children learn to mask without even realising they are doing it. They are noticed for autistic behaviours (**stimming**, talking about their interests, not maintaining eye contact etc.) and naturally try to suppress them to stop the criticism. Some autistic children and young people worry about being ostracised by their peer group, so they learn to mimic how others might behave.

The longer a child masks their authentic self, the more stress and pressure build up inside them. It is one of the reasons why teachers may not see a problem with certain autistic children in school. However, when that child comes home the stress from pretending to be a model student all day long becomes too much to bear. All their pent up stress, mental exhaustion and frustration can come out at home in angry outbursts, tears, or withdrawing completely.

The danger is that repeated masking, over a long period of time, denies a person the opportunity to be accepted authentically for who they are. It also creates a barrier, which prevents the person from having their needs met, because no one can see that they are struggling until they can no longer cope. This may lead to autistic burnout (see section on autistic burnout).

Masking may also make diagnosis more difficult as schools will be asked for their observations, and if a child is masking at school, the school may say that they see no signs of autism, even though a parent provides a long list of things that they are concerned about. We have provided links to information about masking, which you may wish to share with your school to help explain that this is a common problem.

What masking may look like

Copying gestures
Learning scripts

Ignoring
sensory needs

Hiding
stims

Excessive self-
monitoring
behaviour

Worrying or overthinking
previous conversations
to understand what you
did wrong

Trying to disguise or
contain meltdowns

Trying to behave
“normally”

Girls and Autism

The way that boys and girls are assessed for autism is the same, however, the areas in which they face challenges can be different. Please note that these are generalisations and that some girls will present with typically “male” autistic traits and some boys will present with the “female” traits and it is often the case that parents of these boys will also struggle to secure a diagnosis.

“It took 3 years for my daughter to be diagnosed and we were initially told she didn’t have autism because she had an imagination! My son’s diagnosis took around a year. We were fortunate to have the support of their primary school who put many interventions in place while we were going through the long diagnostic processes. We were relieved when they were both diagnosed as it meant there were reasons behind their behaviours and proper structures and interventions could be put in place to limit their anxiety.”

For some girls, autistic traits may be clear but for others, the way that autism presents may differ significantly to the typical male presentation.

Historically more boys than girls were diagnosed as autistic, as research focused heavily on boys. As understanding of the typical female presentation of autism grows, more girls are being diagnosed (as well as some boys who also didn’t display the typical male autistic traits).

Girls are more likely to:

- Have intense interests in the same way that many boys do, but are often in more culturally acceptable areas, for example, Harry Potter, Our Generation dolls, boy bands, make-up tutorials on YouTube etc.
- Be more likely to become withdrawn than behave aggressively in public.
- Mask their differences. Many boys do this too, but it is a very common feature for girls.

Girls often have a group of friends who support and guide them through the primary years and can help to navigate difficult social situations.

These relationships can change as girls grow up, some will mature quicker than others and their interests will change.

At primary school, a group of friends may have sat together in class and helped to interpret social cues and learning needs, but at secondary school, they are likely to be separated from their primary school friends and sometimes will struggle to make new friends. Further issues can arise as seating plans change for each lesson and children are placed into sets for some subjects. So in addition to the pressures of secondary school, girls in particular may struggle from the lack of support from the friends that had previously been there to help them.

“I wish people knew that being different doesn’t always look the same for everyone, especially for girls. Sometimes I pretend I’m okay so I can fit in, but it’s really hard to keep that going — especially when things feel stressful.”

Understanding Demand Avoidance in Autism

Some children and young people with autism may show a strong need to avoid everyday demands. This is often called Pathological Demand Avoidance (PDA) or Extreme Demand Avoidance (EDA). It isn't a separate diagnosis but many autistic people, families, and professionals recognise it as a distinct autistic profile. Some people describe it as autism with PDA traits or a demand-avoidant profile within autism.

This avoidance is rarely about defiance it's usually a stress response to anxiety, loss of autonomy, or feeling overwhelmed. For these children, even routine requests can feel threatening or out of their control especially when they don't feel safe, understood, or able to choose. For these children, even simple requests can feel overwhelming.

What's Normal vs. What's Not

All children avoid things sometimes — that's part of growing up. But for some children, demands trigger such intense anxiety that it affects daily life, relationships, and wellbeing. This PDA-style demand avoidance is part of a neurodivergent profile and isn't seen in neurotypical children, and these children may need specific support strategies to feel safe and able to cope.

You might find it helpful to explore gentle, low-demand parenting and low-arousal approaches. These ways of parenting are all about reducing pressure, lowering stress, and helping your child feel safe and secure—especially when things feel overwhelming for them.

Parent experiences of PDA

Parenting a child with PDA may need a different parenting approach and challenges can be different for every child. We asked families for their experiences and tips on what has helped them:

- 'Demands aren't bad per se but too many can cause problems and can result in a meltdown'
- 'Try to have a joint decision-making process so that when a demand is made, your child may not respond as dramatically'
- 'Agree the non-negotiable rules and boundaries. If you can give clear reasons for these boundaries and agree them together then this can help. '
- 'When a rule cannot be compromised, it can be helpful to remove the personal aspect and explain why it is needed. We use sentences like. 'Sorry it is health and safety rules, that's just how it is. I can't do much about that'
- 'We always have an exit strategy and so does the school. We support my child to know how to appropriately remove themselves from an anxiety provoking situation. Together with school and at home, we understand my child may need to avoid a stressful situation, but you need to agree an appropriate way to do this together. For instance, you might agree a quiet zone to which a young person can retreat. You can also provide reassurance that if something can't be done today it can be tried again another time.'

Rewards and consequences can be challenging

- 'My son does not like praise and rewards as it can be trigger point, particularly personal praise can be overwhelming, as it feels like an expectation and we handle it very sensitively.'
- 'In fact, rewards can create a demand in themselves, as there is pressure to do well to get the reward. Surprise rewards work a lot better for us.'
- 'We find that saying something like "you've put a lot of effort into that and I know you were a bit worried about it, why don't you have a break/do something else now" can be helpful.'
- 'My child has difficulties with consequences. This often leads to escalations as she feels out of control when she is being told off. When she calms down we find it useful to talk through ways to avoid these situations arising in future. We will ask for her views on what she thinks she could have done differently, or what she would feel is a fair outcome.'

Read the experiences of adults with PDA:

Autistic Strengths

Autism can be challenging, but many autistic adults can have successful relationships and families of their own and have discovered that combining their autistic ability to hyper-focus and their special interest has led to a fulfilling career.

There are numerous ways in which autistic individuals have contributed to both scientific and cultural advancements within society. These are just a few:

- Greta Thunberg
- Thomas Edison
- Albert Einstein
- Sir Isac Newton
- Thomas Jefferson
- Mark Twain
- Wolfgang Mozart
- Vincent Van Gogh
- Chris Packham
- Alan Turing
- Darryl Hannah
- Satoshi Tajiri – Creator of Nintendo's Pokémon
- Eminem
- Lionel Messi

"The best thing about being autistic is being myself, in a unique way."

ADHD

Types of ADHD

ADHD (Attention Deficit Hyperactivity Disorder) often presents in three main ways:

- Hyperactivity
- Inattention
- Impulsivity

Some children experience one of these more than others, and some have a mix — this is known as Combined ADHD.

C. 40% of people diagnosed with autism also have ADHD (British Journal of General Practice)

The main features of ADHD as outlined in the diagnostic criteria are:

1. Hyperactivity

- A need for movement, fidgeting, squirming or struggling to stay seated
- Excessive talking
- Frequently interrupts others
- Overactive
- Loud interactions with others
- Struggles waiting turns

2. Inattention

- Makes careless mistakes
- Difficulty maintaining attention
- Often loses or misplaces things
- Avoids activities that require a lot of concentration or prolonged attention
- Has difficulty organising themselves, tasks and activities
- Difficulty following instructions
- Slow to process information
- Poor working memory
- Daydreams
- Shy or withdrawn behaviour

3. Impulsivity

- Interrupts or intrudes on others (e.g. butting into conversations or games)
- Blurting out answers before a question is finished
- Struggles to wait their turn
- Acts without thinking about consequences
- Difficulty controlling emotions or sudden reactions

There are many more features of ADHD that could also have a significant impact on a child's organisational skills and emotional well-being that are not currently listed in the diagnostic criteria, and we have listed some of these below.

Challenges

Children with ADHD may be labelled as naughty and disruptive for behaviour which they cannot control. They may experience problems with:

- Forgetfulness e.g. forgetting birthdays, plans or arrangements
- Time Management e.g. being late for plans or activities
- Time Blindness e.g. difficulty calculating time, overly optimistic about how long a task will take, or daydreams and doesn't realise how much time has passed
- Rejection sensitivity e.g. being more sensitive to problems or criticism
- Overwhelm – due to struggling with task initiation and organisational skills they can become so overwhelmed with a long "To Do List" that they end up doing nothing at all. To others this can look like laziness, avoidance, and procrastinating.

Positives

There can also be many positives such as creativity, curiosity, willingness to take risks and the ability to think outside the box.

Hyperfocus - this is the ability to have intense concentration or fixation on a task or activity, but it has to be something that they enjoy. During hyperfocus, individuals with ADHD may become unaware of time, ignore those around them, and even neglect their own needs. ADHD people cannot always choose what they focus on.

“My brain doesn't sit still, ever!”

Specific Learning Difficulties (Dyslexia, etc.)

Literacy and Numeracy difficulties - including concerns about Dyslexia, Dysgraphia and Dyscalculia

A specific learning difficulty is a neurodevelopmental condition which can occur across a range of intellectual abilities.

If a specific learning difficulty is not identified and supported, the young person may be embarrassed and try to mask their difficulties, or exhibit distressed behaviour and may not meet their true potential. As a result, there is an increased risk of low self-esteem, poorer overall mental health, unemployment/under-employment and dropping out of school.

"I feel like the spotlight is on me! I worry if I will get the information out of my brain in time."

Different terms are used to describe the conditions:

Severe and Persistent Literacy Difficulties (SPLD) (including concerns about Dyslexia/ Dyscalculia and Dysgraphia)

People with SPLD/dyslexia may have difficulty connecting letters they see on a page with the sounds they make. As a result, reading becomes a slow, effortful, and not a fluent process for them.

Problems may begin even before learning to read, for example having difficulties with phonics and having trouble breaking down spoken words into syllables and recognising words that rhyme. Younger children may not be able to recognise and write letters as well as their peers. People with SPLD/dyslexia have difficulty with accuracy and fluency in word reading and spelling and children may find it difficult to complete the same amount of work as their peers. They may find it hard to read written instructions and so give verbal or written answers that seem inappropriate.

Children and adolescents with SPLD/dyslexia often try to avoid activities involving reading when they can, sometimes by being disruptive in class. They may find it easier to understand pictures, video, or audio rather than written words.

Dysgraphia is a term used by some people for writing difficulties and can include having problems with spelling, grammar, punctuation, and handwriting.

Dyscalculia is a term used by some people to describe difficulties with learning number related concepts or using the symbols and functions to perform maths calculations. Problems can include difficulties with number sense, telling the time, memorising number patterns, calculations and maths reasoning.

Within the UK, most neurodivergent conditions have agreed diagnostic criteria (e.g., ASD, ADHD, Dyspraxia, Tourette's); Dyslexia, Dysgraphia and Dyscalculia do not, which means that these terms are not used by some organisations.

Local information

Essex, Southend and Thurrock Local Authorities want all children to get the help that they need, based on their literacy and maths needs, regardless of whether or not they have particular patterns of difficulties or whether the parents have paid for a particular assessment. You should not need a diagnosis of dyslexia or dyscalculia to access this support.

The NHS provides a link to the British Dyslexia Association www.nhs.uk/conditions/dyslexia

“I am dyslexic and find it really hard to help my child with homework.”

Help at school

If you have concerns, talk to your child's school about how they identify and meet literacy and maths needs. There are various assessments that schools can use to analyse a pupil's literacy and maths difficulties in detail. The results should be used to decide if extra help is required to make progress, and if so, what type of help.

These strategies should be used as early as possible, to help any child or young person with literacy or maths difficulties.

Training and resources are available from the Local Authorities' Education departments, to help schools and support your child and may include access to a literacy programme.

“A laptop helps me get down what I want to write.”

“I love colour, I need visual resources. I don't want to be made to feel stupid though.”

Did you know...
Tom Holland, Jamie Oliver and Steven Spielberg have all stated that they have dyslexia...

Libraries

Libraries provide a welcoming and safe space for you and your child.

Many libraries will have a dedicated area for adults and children with literacy difficulties, they also have staff trained in understanding different needs and signposting help.

They may have a supply of Barrington Stoke literature, including books with a high interest level (e.g. age 12) and a lower literacy level (e.g. reading age of 6) – this is shown discreetly on the back of the book. They also have books in bigger or easier to read fonts/on coloured pages and audio books, etc.

Further information

- Cambugs 1, 2 and 3 (evidence-based app developed by Educational Psychologists, parents and Cambridge University): a fun way to teach children letter sounds, phonics and key words. You can watch a YouTube video on Cambugs letter sounds here (<https://www.youtube.com/watch?v=zbltMVnEhWw>), and a video about Cambugs phonics here (<https://www.youtube.com/watch?v=gLae3lJPXYy>).

Local services

The approach for supporting literacy and learning difficulties in Essex, Southend and Thurrock is consistent in terms of schools providing support based on need, without the requirement for a diagnosis. However, the central support services are different. It may be helpful for you to understand what is available so that you can direct your school if needed.

Essex

- You can contact the EP Parent Helpline which is available on alternating Mondays and Tuesdays between 1pm and 5pm. Term time only. You can book a 25-minute appointment in advance via Microsoft TEAMS for ideas about things that could help your child and suggestions of what to do next. **[Book here](#)**.
- Essex SENDIASS www.essexsendiass.co.uk
- send.essex.gov.uk/help-learning

Southend

- You can contact the **Southend Educational Psychology Service** on **01702 215909** or email epadmin@southend.gov.uk. They can give you advice and overview the support that you can expect from school.
- Southend SENDIASS www.sendiasssouthend.co.uk

Thurrock

- You can contact: admineducation@thurrock.gov.uk to find out more about support by schools and the Educational Psychology Service.
- Thurrock SENDIASS www.patt.org.uk

Dyspraxia (Developmental Coordination Disorder - DCD)

Dyspraxia (also known as Developmental Coordination Disorder or DCD) affects the physical co-ordination of both fine and gross motor skills.

This can impact on everyday activities, such as:

- Writing and drawing
- Tying shoelaces and doing up buttons
- Eating food, drinking from a cup and using cutlery
- Speaking
- Riding a bike
- Playing sports

Some children may find some of these tasks physically painful and try to avoid doing them.

An Occupational Therapist can provide you with a number of strategies and/or exercises to help your child with these difficulties.

"I felt so bad, I'd been constantly nagging my son to hold his cutlery properly and didn't realise how painful it was for him to do that. He thought everyone's hands hurt when they ate and that he was just rubbish at it."

"Giving me time to think can help."

✓ Hints and tips

- ✓ Talk to your school - strategies such as using a gym trail, wobble cushions, sensory breaks, using a laptop and pencil grips may help.
- ✓ Scooter boards and balance boards can help to teach a child to feel and understand their body movements and help spatial awareness.
- ✓ Sometimes just encouraging your child to slow down and think about what they are doing can help with their organisational skills.
- ✓ Chunky cutlery is easier to grip and control.
- ✓ Help strengthen hand dexterity by engaging in activities with play dough, rolling, cutting, slicing, picking up with a fork etc.

"Once my school understood I had dyspraxia, there were lots of things they could do to help me, like using a laptop in class."

???

Did you know...
Daniel Radcliffe, actress/
model Cara Delevingne,
singer Florence Welch
(Florence & the Machine)
and scientist/presenter
Maggie Aderin-Pocock
are Dyspraxic.

Tourette's Syndrome

Tourette's Syndrome (TS) is when somebody makes movements and noises that they can't control. These noises and movements are called tics.

Tics are usually fast and happen again and again. Tics are preceded by an internal sensation called a 'premonitory urge' that is typically reported as uncomfortable feeling (like an itch) that they need to get rid of, which is why they perform the tic (i.e. to relieve the uncomfortable sensation).

TS is a genetic condition, with onset typically at around 5 years of age but an increase in tics is often seen around the time of puberty. It is characterised by the presence of multiple motor tics and one or more vocal tic that are present for over a year. Some people only have motor tics and others only have vocal tics, these are referred to as Persistent (or Chronic) tic disorders. For people with tics that present for less than one year, this is referred to as Transient tic disorder.

A diagnosis of TS does not reference severity so some people may have just a few tics which do not interfere with daily life, whereas for others, tics can be more frequent and complex so it can have more of a significant impact.

Contrary to popular opinion, only about 5-10% of people with TS have vocal tics which involve swear words and these can be managed using therapies in the same way as other vocal tics.

Tics will naturally 'wax and wane', with periods where people will have more or less tics, with no apparent pattern to this increase/decrease in tic frequency. However, tics are also related to emotional expression and may be more evident at times of high emotion, anxiety, stress or tiredness – so there may be good days and bad days. Tics can be made worse when stressed, nervous, excited or anxious, so young people may find that they tic more than usual in these situations, such as standing up in front of people to give a talk, getting in from school, at Christmas or when going on holiday.

Some people can learn to control or suppress the tics, for example, in a social situation. For some people this may happen automatically and they may not realise they are controlling their tics, whilst for others it can be effortful and may be exhausting. In the majority of cases, the tics will improve and may go away completely by late adolescence/early adulthood. This is thought to reflect changes in the brain and ongoing development of inhibition networks.

TS is often associated with other neurodivergent conditions (co-morbidities) such as ADHD, anxiety, especially social anxiety, Obsessive Compulsive Disorder (OCD) and specific learning difficulties. It is often most helpful to support children and young people with tics in managing co-morbidities, as this can have a positive impact on the tics.

Getting a diagnosis for TS

The first step is to visit your GP who will ask about the tics, how often they occur and what kind of things your child does. They will then refer to a specialist who will ask you and your child lots of questions and base their decision on meeting your child. There are no medical tests like blood tests or scans to work out if you have TS.

Learning about tics and identifying how best to support your child will be the first treatment approach and behavioural therapies may be recommended.

There are two evidence-based therapies for tics, which are Habit Reversal Therapy and Exposure and Response Prevention.

Both therapies help your child to recognise premonitory urges and learn how to react differently to the signals, for example, if the brain sends a signal to the hand to punch the leg, then learning to recognise that signal and instead of punching the leg your child can learn how to resist the urge and just make a fist with the hand and clench the arm instead. This can be helpful if your child has tics that are interfering with daily life, causing harm to themselves, or that may be socially embarrassing (e.g. shouting out).

For some children, medication may be suggested to manage TS and your doctor will discuss with you and your child if they think this may be helpful. You should talk to your doctor about all the options available for treating TS.

✓ Hints and tips

- ✓ Be understanding – tics are involuntary and can't be controlled.
- ✓ Be sensitive that the person with tics may feel self-conscious or embarrassed.
- ✓ Practice mindfulness and breathing exercises to help to relax.
- ✓ Physical activity and intense concentration can help to lessen tics - encourage those activities.

Obsessive Compulsive Disorder (OCD)

OCD can be a debilitating condition and is often misunderstood; so much so that many people hide it for many years. The good news is that OCD is a treatable condition, with both therapy or medication available that can help with management and recovery.

Children and adults with OCD experience intensely negative, repetitive, and intrusive thoughts, combined with a chronic feeling of doubt or danger (obsessions). To suppress the thought or lessen the anxiety, they will often repeat an action, again and again (compulsions).

1 Obsessive thoughts

These are thoughts, ideas and intrusions which occur repeatedly. These thoughts are likely to be unwelcome and frightening and they can make people feel scared, anxious, and out of control.

There are two aspects to OCD

2 Compulsive actions

These are activities which are repeated to try and take control over a situation to reduce the anxiety caused by obsessive thoughts. These can include:

- Physical actions such as washing hands
- Checking things, for example that doors are locked, or plugs switched off
- Repeating sequences in your mind – words, or numbers
- Constantly asking for reassurance

The main treatment is cognitive behavioral therapy (CBT). If this does not help, medication may be offered or a combination of both.

One of the greatest challenges if you have OCD, is to debunk the widely held belief that OCD is a mild or even “quirky” problem that is nothing more than hand washing. People might use the phrase “a bit OCD” without understanding what it really means.

There are also positives! People with OCD can have incredible attention to detail, and many are creative. By understanding the way they deal with their own difficulties, people with OCD often can be understanding of others who are dealing with things that they can’t control.

Charlize Theron and
David Beckham
have OCD?

Section 2

Related health difficulties

Co-Occurring Conditions

A lot of neurodivergent conditions are co-occurring, or overlap. It may be useful to understand more about these, to better understand your child's needs. This list is not exhaustive, but some examples are:

- **Hypermobility** – very flexible joints which may cause you pain. www.hypermobility.org
- **Ehlers-Danlos syndromes (EDS)** are a group of rare inherited conditions that affect connective tissue. Connective tissue provides support in skin, tendons, ligaments, blood vessels, internal organs and bones. www.ehlers-danlos.com/eds-types
- **Scoliosis** – curvature of the spine which may result in back pain. britscoliosis.org.uk/Scoliosis-Overview
- **Irritable Bowel Syndrome (IBS)** – chronic tummy pain, cramps and diarrhoea. www.nhs.uk/conditions/irritable-bowel-syndrome-ibs/further-help-and-support/
- **Epilepsy** – a neurological disorder which can cause seizures or unusual sensations. <https://epilepsysociety.org.uk/>
<https://www.youngpilepsy.org.uk>
- **Fragile X** – a genetic condition with traits including learning disabilities and some pronounced physical features. Some autistic children will be tested for Fragile X. www.fragilex.org.uk/
- **Irlen syndrome** – Differences in the way the brain processes visual information which can affect reading and printed information. It is not easily diagnosed via normal sight checks. www.learningdisabilitytoday.co.uk/irlen-syndrome
- **Prosopagnosia (Face blindness)** – people with this have great difficulty recognising faces that they have seen before, even many times, especially if they are not in their usual context i.e. you see a teacher at the shops. www.faceblind.org
- **Auditory Processing Disorder (APD)** – Anyone with this problem does not actually have an issue with their actual hearing, but rather the brain's ability to process and interpret the signals it is receiving from the ear. This can result in a delay in processing what someone is saying to you, difficulties in differentiating between similar sounding words and being unable to filter out background noise. www.additudemag.com/what-is-auditory-processing-disorder
- **Learning Disabilities** – Learning disabilities are an intellectual impairment and affect how a person understands and retains information and can support themselves. There are different definitions that are based on the person's IQ and how much support they need. <https://cks.nice.org.uk/topics/learning-disabilities/background-information/definition>
- **FASD** – Foetal alcohol spectrum disorder (FASD) describes the impacts on the brain and body of someone exposed to alcohol in the womb. Recent research shows links to both the father's alcohol consumption before conception and the mother's during pregnancy. <https://nationalfasd.org.uk/about-fasd/what-is-fasd/>

Mental Health

Feelings of anxiety are entirely normal and all children will benefit from support to help them manage their feelings and worries from time to time.

However, neurodivergent young people are more likely to experience feelings of anxiety, depression, burn-out and low self-esteem, so may need additional specialist support.

The National Autistic Society undertook a study of **130 young people with autism** and found that **80% reported concerns with their mental health**, partly as a result of the pressure to act 'normal' in a neurotypical world.

ADHD people are also more likely to experience mental health challenges Up to 50% of people with ADHD will experience anxiety at some point in their lives and 18.6% to 53.3% of people with ADHD also have depression (Katzman et al., 2017).

If you have any concerns about your child's mental health, consider that the earlier on that any issues are identified, the quicker support can be accessed and this can often stop problems from escalating and becoming more serious. Speak to your GP if you become worried about your child.

There is also an increased focus on mental health in schools and work is underway to increase resources, training and information available, so speak to your child's teacher or SENCO as soon as you have any concerns and they may be able to refer them for help with mental health support, which can sometimes be offered at school.

Whilst not directly helping your child, you can help to educate the community around you to help promote inclusion - educate everyone you meet about neurodiversity! The more that people understand that it is a neurological difference, rather than something to be ashamed of, or that needs to be cured, the more accepting they will become.

Understanding the reasons for our children's difficulties can help us to find ways to provide the right support. Below is a brief overview of the more common mental health difficulties, some of which you may not have heard of – see the further information at the end of this section for where you can go for help.

Anxiety

Anxiety is commonly talked about as feeling worried or afraid and is how we feel when we are feeling out of control or threatened. High anxiety can lead to feelings of panic and panic attacks. Unsupported, high anxiety over a period of time can lead to chronic stress or autistic burnout. Please see **Section 7** for further information about anxiety, its causes and tips to help.

Autistic Burnout/Depression

Burnout is often a consequence of masking, or feeling overwhelmed for extended periods of time.

Burnout may manifest as intense and serious anxiety and/or depression and it may involve increased autistic traits such as repetitive behaviours, increased sensitivity to sensory input, or difficulty with change. In extreme cases, it can go on for many months.

Autistic burnout, explained | Spectrum | Autism Research News (<https://www.spectrumnews.org/news/autistic-burnout-explained/>)

Body Dysmorphia

Body Dysmorphia is high anxiety about body image and can lead to obsessional and compulsive behaviours to do with appearance.

What is body dysmorphic disorder (BDD)? | Mind, the mental health charity - help for mental health problems (www.mind.org.uk/information-support/types-of-mental-health-problems/body-dysmorphic-disorder-bdd/about-bdd/)

Low Self-Esteem

This is the way that we view and value ourselves. It can be impacted by any other mental health conditions but is also common where children perceive that they are different to others, or have difficulty with common tasks – so it is very common for neurodivergent children to have low self-esteem.

Most Effective Ways to Build Self-Esteem in Kids with Autism (<https://inclusive-solutions.com/blog/most-effective-ways-to-build-self-esteem-in-kids-with-autism/>)

Rejection Sensitive Dysphoria

Being rejected by friends or family is a difficult experience for anyone to deal with, but most people have instinctive ways to help them deal with the sadness and pain. Autistic people and those with ADHD may not have those in-built coping mechanisms and in these situations of rejection, may feel overwhelmed by the loss of social support and the impact on their self-esteem and resilience. This can build up over time, resulting in the neurodivergent child reacting badly to any perceived criticism.

This article from ADDitude Magazine gives a great overview: **What Is Rejection Sensitive Dysphoria? ADHD and Emotional Dysregulation** (www.additudemag.com/rejection-sensitive-dysphoria-adhd-emotional-dysregulation/)

Self-Harm

If a young person is intentionally hurting themselves, this is called self-harm. Self-harm is usually a sign that the child is feeling overwhelmed, distressed, or in emotional pain and is trying to cope with feelings they can't express in other ways.

You can find out more from Young Minds www.youngminds.org.uk/young-person/my-feelings/self-harm

Trauma (PTSD)

Going through stressful, frightening or distressing events can cause trauma and long-term harm. This can involve school related trauma and be a consequence of bullying.

The link between autism & PTSD | Embrace Autism (<https://embrace-autism.com/the-link-between-autism-and-ptsd/>)

Bereavement

Grief affects everyone differently, but for many neurodivergent young people, especially those already managing mental health challenges, bereavement can trigger feelings that they haven't experienced before and increase emotional and sensory stress, disrupt routines, and trigger past trauma or anxiety.

www.childbereavementuk.org/News/new-resource-launched-on-supporting-bereaved-pupils-with-send

Local services

Your child's school may receive help from Essex schools Mental Health Support Team www.nelft.nhs.uk/essex-mental-health-support-teams---find-your-school

Southend, Essex and Thurrock Children and Adolescent Mental Health Service (SET CAMHS)

The service is for anybody aged between 0-18 living in the Essex, Southend and Thurrock areas and is free at the point of entry. The service is also for young people with special educational needs (SEN) up to the age of 25.

SET CAMHS

www.nelft.nhs.uk/set-camhs - call Freephone 0800 953 0222, lines are open 9am to 5pm. If you call outside these times, your call will be diverted to the main switchboard.

Further services

- Young Minds www.youngminds.org.uk/parent/parents-helpline
- Renew counselling <https://renew.org.uk>
- Kids inspire www.kidsinspire.org.uk
- Kooth www.kooth.com

Urgent Help

You can seek advice from 111 if you need help urgently, but it is not an emergency. In an emergency you should go to A&E or dial 999.

The mental health charity MIND has produced a guide on planning for a mental health crisis www.mind.org.uk/information-support/guides-to-support-and-services/crisis-services/planning-for-a-crisis

 Waiting times to access mental health services can be long, please refer to the information in Section 9 for ideas on you can support your child while you are waiting.

What if you have difficulties accessing help?

For many neurodivergent children, their social, communication and other difficulties can mean that traditional strategies such as talking therapies and group therapy sessions are less suitable, so it is helpful to know that other information, strategies and groups are available.

- Mental health of people with autism | Mind (<https://www.mind.org.uk/about-us/our-policy-work/equality-and-human-rights/mental-health-and-autism/>)
- ADHD and mental health - ADHD Aware (<https://adhdaware.org.uk/what-is-adhd/adhd-and-mental-health/>)
- Book - **The Guide to Good Mental Health on the Autism Spectrum** by Emma Goodall and Jane Nugent

If you are finding it difficult to access services like mental health support and your child has continuing care or an EHCP, you can request a Personal Health Care Budget. This enables your Clinical Commissioning Group (CCG) to identify private services that fill a gap and can meet your child’s SEND needs.

Fussy Eating, Eating Difficulties and Eating Disorders

Understanding food, feelings, and sensory

Every child’s relationship with food is different. Some enjoy exploring new foods and others can find textures painful, smells overwhelming, or feel anxious when routines around food change.

Knowing the difference between a typical fussy phase, sensory-based eating differences, and when extra support might help can take the pressure off families.

For practical ideas, see:

- **Eating & Mealtimes** (page 120)
- **Sensory: Taste** (page 159)
- **Interoception** (page 161)

Most children experience a reluctance to try new foods between the ages of 2-4 (according to the British Dietetic Association (BDA), which is described as the neophobic stage (reluctance to try new foods) as most common between ages two and four. In neurodivergent children, developmental milestones may occur 3–4 years later, so eating differences can continue well beyond the typical age. See page 120.

Fussy Eating: Neurotypical vs Neurodivergent

	Neurotypical Children	Neurodivergent Children
Why it happens	Temporary stage of independence or control	Sensory sensitivities, anxiety, or executive functioning differences
Sensory experience	Mild dislikes or preferences	Strong sensory reactions with textures or smells can cause gagging or pain
Routine and predictability	Manage small changes	Need for sameness and structure to feel safe
Awareness of hunger	Clear hunger/ fullness cues	Interoception differences – may forget to eat or drink or not notice hunger or thirsty (see page 161)
Trying new foods	Encouragement often works	May explore by looking, smelling, or touching before tasting
Social eating	Often eat better with others	Social situations may trigger sensory overload or anxiety

1. Fussy Eating

What it is:

A normal part of child development where children **may** become selective about what they eat often around taste, texture, or control.

Typical signs:

- Refusing certain foods or colours
- Preferring familiar brands or textures
- Eating better when calm and unpressured
- Still eating from all main food groups

What helps:

- Keep mealtimes calm and predictable
- Offer familiar foods alongside small tastes of new ones
- Avoid pressure or “just one bite” rules
- Model curiosity and exploration rather than insistence

For most children, fussy eating improves naturally. In neurodivergent children, sensory sensitivities can make this phase last longer or feel more intense.

Useful link

- Fussy eaters - NHS www.nhs.uk/baby/weaning-and-feeding/fussy-eaters/

2. Eating Difficulties

What they are:

Eating difficulties are common in neurodivergent children and can be linked to:

- Sensory sensitivities (see Taste – page 159)
- Anxiety or previous negative experiences with food
- Executive functioning differences such as forgetting to eat (common in ADHD)
- Interoception differences – struggling to recognise hunger or fullness (see page 161)

These difficulties are not about “being picky or fussy” they are genuine responses to how the body and brain process food and feeling safe.

Typical signs:

- Distress, gagging, or nausea from textures, smells, or temperatures
- Reliance on specific “safe foods” (often by brand or packaging)
- Differences between home and school eating
- Fear or anxiety around unfamiliar foods
- Limited variety that doesn’t expand over time

What helps:

- Respect safe foods and avoid removing them
- Keep mealtimes calm, structured, and predictable
- Allow exploration without the expectation to eat
- Involve children in shopping, serving, or cooking for control and confidence
- Contact a health visitor or school nurse

School-aged children are still entitled to support for their eating needs even if they are home-educated or not currently attending school.

Local authorities and health services can provide advice, monitoring, and referrals through the School Nursing Team, Health Visiting Service, or community children’s health services, ensuring every child can access help regardless of educational setting.

Useful link

- Eating issues in neurodivergent children <https://parents.actionforchildren.org.uk/neurodiversity/understanding-needs/child-wont-eat-additional-learning-special-educational-needs/>

Family Tips

- ✓ Believe your child when they say they “can’t eat” something – it’s often a genuine sensory or anxiety response.
- ✓ Always include one “safe food” at each meal (see Eating and Mealtimes (page 120))
- ✓ Encourage curiosity: smelling, touching, or looking at food counts as progress.
- ✓ Avoid pressure, threats, or rewards related to eating.
- ✓ Praise small steps and focus on maintaining a relaxed atmosphere, not portion size.
- ✓ Keep routines calm, visual, and predictable.
- ✓ Link food exploration to sensory play (see Taste – page 159) and interoception awareness (see page 161).

Work with Your Child's School

Schools can be great partners in supporting eating needs. They can:

- Agree on safe packed lunch plans so your child always has food they can manage.
- Offer flexible seating or quieter dining arrangements to reduce stress at mealtimes.
- Support your child with the social side of eating, helping them feel included without pressure.

Open communication between home and school can prevent misunderstandings and promote a consistent, safe approach to food.

Did you know?

If you are entitled to receive free school meals but because of sensory difficulties with food, or a medical condition, eating disorder or if your child is unable to eat their school dinner and you have to provide a packed lunch, your school should provide you with an alternative.

<https://contact.org.uk/help-for-families/campaigns-and-research/free-school-meals-for-disabled-children>

"My son was referred to a specialist feeding team as he was losing weight. They checked for medical problems and helped us see that most of his eating difficulties came from sensory sensitivities. We now use a food diary and introduce new foods slowly, outside of mealtimes, with no pressure. It's not always easy, but small steps really help."

3. Eating Disorders

Important: Eating disorders are serious medical and mental health conditions that always require professional support. They are never a choice and are not caused by parenting style or "fussiness."

www.autism.org.uk/advice-and-guidance/professional-practice/avoidant-eating

Possible Signs of an Eating Disorder

- Skipping meals or restricting food
- Intense fear or distress around eating
- Preoccupation with weight or shape
- Self-induced vomiting or excessive exercise
- Food avoidance, rituals, or sensory refusal affecting daily life

First Contact: Health Visitor or School Nursing Team

Your Health Visitor (HV) or School Nurse is usually the best first point of contact if you have concerns about your child's eating, growth, sensory issues, or emotional wellbeing around food.

They can:

- Check growth, weight, and general health
- Offer early reassurance and practical strategies
- Identify concerns that need further assessment
- Signpost or refer to community children's health services
- Support you while you wait for specialist input

"My daughter is autistic and non-verbal and has an eating disorder, severe selective eating, and Pica, which is eating non edibles. I would say Pica is one of the harder aspects of her autism as she eats the plaster on her bedroom walls and the 3 beds we had for her, and the wood frames. We now have a softplay bed and are getting her room made safe with softplay material on the walls. Our garden is also out of use for the time being as she eats the plants, leaves and berries, so we are hoping to remove all plants and trees so there would be just grass and patio."

Did you know...
that anyone aged 14 or over, with a learning disability, is entitled to an annual health check with their GP? Learning disabilities - Annual health checks - NHS
(www.nhs.uk/conditions/learning-disabilities/annual-health-checks)

When to Contact Your GP

If you haven't spoken to your Health Visitor or School Nurse and your concerns are increasing, contact your GP if your child is:

- Losing weight or not growing as expected
- Eating a very restricted range of foods
- Showing symptoms of nutritional deficiency (tiredness, pallor, frequent illness)
- Gagging, choking, or vomiting with eating
- Distressed or anxious at mealtimes
- Showing low mood, withdrawal, or body image concerns

What Your GP Can Do

Your GP can:

- Assess for underlying medical causes (reflux, allergies, constipation, anaemia)
- Review overall health and nutritional risk
- Co-ordinate joined-up care with your HV or School Nurse
- Refer to specialist services, if clinically appropriate including:
 - Paediatric dietitian or community paediatrician
 - Occupational Therapist (OT) for sensory and feeding assessment
 - Speech and Language Therapist (SLT) for oral-motor concerns
 - CAMHS or the Eating Disorder Service
 - Check if there is a local Feeding Team

Professional Support

- Speak to your Health Visitor, School Nurse, or GP for local referral options
- Ask whether your area has a Feeding Team
- For urgent mental health worries, contact NHS 111 or your local crisis service

The Role of Health Services for Children and Young People with SEND

This is a summary of the Special Educational Needs and Disabilities (SEND) support provided by our local health services

www.midandsouthessex.ics.nhs.uk/health/campaigns/child-health/special-educational-needs-and-disabilities-send-support/special-educational-needs-and-disabilities-our-responsibilities/

Section 3

Where to Start

Introduction

If you have any concerns about your child or young person then trust your instincts. You know them better than anyone else and are their greatest advocate.

Some children may have neurological differences that are identified at birth or during their preschool years; while others may reach developmental milestones earlier or later than their peers, such as walking, talking, and toileting. It's also possible for a child's differences to become more noticeable as they progress through primary and secondary school, or during puberty.

It may be that you are not the first to notice differences. Some parents will make adjustments to their own communication and interaction with their child to compensate, without realising, especially if there is no sibling for comparison. If your child's difficulties are pointed out by other family members or staff at pre-school/school in the first instance it is not your fault for not seeing it.

“my child's school didn't believe there was a problem, until he was diagnosed.”

“I felt no one understood my child. I didn't understand why my child was getting upset.”

Why might a diagnosis be important?

You may have been told that your child does not need a diagnosis to access support and by law reasonable adjustments must be made for a child based on their needs, regardless of whether or not they have a diagnosis.

However, it may prove more difficult to access support without having a diagnosis in place. Assessments and diagnoses can help clarify your child's needs and guide support planning. If your child or young person receives a diagnosis they will be protected against discrimination under the Equality Act 2010.

Not every family will choose to seek a diagnosis, and that is perfectly fine - it's up to each individual family to make that decision. We asked parents why they sought a diagnosis for their child:

- 'To get help at school'
- 'To understand what was going on – was this a behavioural issue or something more?'
- 'To protect my child in the future'
- 'Because he was having a really hard time and needed help'
- 'So that she is protected by disability discrimination legislation'
- 'To know that I wasn't going mad as a parent'

First Steps

There are lots of things that you can do to help your child without a diagnosis:

- ✓ Speak to your health visitor (pre-school children)
- ✓ Speak to the school nursing team (school aged children)
- ✓ Speak to your school to request access to therapist support and advice. New services are being rolled out with effect from September 2025 on a phased basis. There will be an increased availability of therapist support and advice without the need of referral, through improvements such as regular advice lines, drop-in sessions in family hubs, attendance at school coffee mornings and the provision of workshops. In most areas there will be link therapists working in and with schools.
- ✓ Talk to other parents in a similar situation
- ✓ Keep a diary of differences or difficulties
- ✓ Read this book and follow the links to research areas of interest/concern
- ✓ Join support groups
- ✓ Find inclusive activities for your child

Every local Council will have a "Local Offer" on-line which will detail all the help and services available for children with special educational needs and disabilities in that area.

Local services

"This doesn't mean your child is broken, just that their brain works differently. Give your child the tools to operate in a neurotypical world on their terms, without dimming who they are."

"Some days I wondered whether I was imagining her difficulties but when I started to keep a note of things that happened on difficult days a pattern started to emerge and it helped me understand the things that triggered her behaviour."

Keeping a record

Keeping notes can help you to understand patterns and trends of your child's behaviour. Many neurodivergent children can have good days and bad days. This may enable you to recognise triggers and how you can best support your child. You can keep a record of sensitivity to smells, noises, examples of distressed behaviour, anxieties, unusual speech patterns and interactions with other children, struggling to concentrate, fidgeting, difficulty with handwriting or using cutlery, etc.

You can also include comments made by professionals, family members, childminders, teachers or friends, as this may help to validate your concerns.

It is useful to have these examples to hand when you are talking to professionals.

"Try to detect when your child reacts poorly to certain smells, sounds or other sensory stimuli. Sometimes they don't even realise what has triggered them. Sometimes it feels weird for them to say when a sensory thing is bothering them due to the public need to mask and not "act autistic"."

Section 4

Overview of the diagnostic process and what to expect

Discussing your Concerns

GPs and schools do not have the expertise to diagnose neurodivergent conditions, so they will refer you to a clinician who can undertake the diagnostic assessment. Referrals can also be made by a range of professionals including community paediatricians, educational psychologists, health visitors and other health professionals.

Referral

The person making the referral will include any information you provide when they make the referral, so it is important to share the records that you have been collecting. You can also include

- whether any relations are neurodivergent,
- relevant medical history etc.
- feedback or evidence from any professionals working with your child, this can include swimming teachers, childminders after school club leaders etc.

They will then refer your child to the local NHS service responsible for diagnostic assessments.

Sometimes, at the triage stage, families are told that a school must provide evidence before a referral can be accepted. This can feel like a barrier, but it's important to know:

- A school cannot block your child from being referred. While information from school can be helpful, it is not a legal requirement for referral.
- Your GP should base the referral on the information that you have provided based on evidence from home and other settings.

Right to Choose

However, you are not limited to your local service. Under the NHS Patient Right to Choose, you can ask your GP to refer your child to another NHS-commissioned provider in England that carries out assessments.

Don't Wait for a Diagnosis to Seek Help

It's natural to think that once you finally get a diagnosis, everything will fall into place. The truth is, while a diagnosis can bring clarity and open up support pathways, it doesn't solve every difficulty your child may be facing.

And just because you are waiting for an assessment, it does not mean you have to wait to access support, you can:

- Many services, charities and support groups will be happy to help without a formal diagnosis.
- A diagnosis is not required to access support for your child at school or pre-school so you should talk to them to ask what they can do to help.
- Continue to update your records with examples of your child's strengths and difficulties including reports, notes, diary entries etc. as these notes will help at assessment and also guide support in the meantime.
- Consider applying for Disability Living Allowance which could help with the cost of providing additional therapies and interventions to help your child.
- If you are worried about your child's mental health or emotional wellbeing, please don't wait until after diagnosis to act. You can speak to your GP and also see the information about mental health in section 2 of this book.

What to expect at the appointment

An assessment can take place with one professional, such as a paediatrician, or sometimes, it can be a multi-disciplinary team approach (MDT) and several professionals and clinicians can be involved as part of the assessment, such as:

- Paediatrician
- Speech and language therapist
- Educational psychologist
- Specialist nurses
- Occupational therapists
- Nursery Nurse

As well as the involvement of different professionals and clinicians, the type of assessments or "diagnostic tools" used can also vary depending on the condition being assessed for, and the age of the child. You will be advised ahead of any assessment the type of tools that will be used, and who will be conducting the assessment. If you have any questions, you can ask before the assessment takes place.

"When I took my eight year old son for an assessment, and he heard all the things I had to say about his disabilities and how they affected him, he was so upset that later in the day he wet himself. I felt awful, I wish I had known I could speak to them beforehand, rather than in front of my son. He still remembers how sad he felt now."

'The interview was very thorough and took over 2 hours. I was asked about my son's behaviour as a baby and toddler – he was 13 when the assessment took place so it was a lot to remember! We found it useful to look at old photos and videos, and to talk to family and friends before the interview to discuss any unusual behaviours.'

✓ Top tips

- ✓ Make sure you bring your list of the signs you see (a timeline).
- ✓ Bring a pen and paper with you so you can take notes.
- ✓ Consider bringing your partner/a friend/family member – there's a lot to take in at these meetings so it helps to have an extra set of ears and some moral support.
- ✓ To avoid your child having to listen to you talk about their difficulties, you may wish to ask if you can contact them in advance to discuss the information that may upset your child while they are in the room e.g. a phone call in advance, or an email. Alternatively, if you bring a friend or partner to the appointment you could ask them to come with you to the appointment, so that they can take the child out of the room at this point.
- ✓ Take a drink and snack for your child as well as a favourite toy for whilst they are waiting.
- ✓ Write down any questions you may want to ask in advance, to help you remember on the day.

"I felt so angry that no one listened to me for years."

"Relief that I was being listened to and very emotional."

"Shocked, even though it was expected."

Your child has received a diagnosis

How did you feel?

The route to getting a diagnosis can be emotional. Other parents have described their feelings:

"I started to accept it and take it as a blessing instead."

"Relieved, sad, guilty and I felt it was my fault."

"We received our diagnosis yesterday. It didn't take long to confirm what I already knew that this gorgeous amazing little boy is autistic."

"After the diagnosis I got told what I already knew but it felt good to have it written in black and white."

What can I do now ?

It is common for parents to react differently to a diagnosis, whether it brings feelings of overwhelm, shock, or relief. Once a diagnosis has been confirmed, it is important to do thorough research to gain a better understanding of your child's needs.

Remember that your child is still the same person they were before receiving the diagnosis, and allow yourself time to adjust to the news.

Local charities and support groups may offer on-line or in-person meet ups, as well as 1:1 support for parents and are a vital support network for families. Many will also offer activities for your child, giving them opportunities to meet other neurodivergent children and make friends.

"I found it really helpful to join a local support group and talk to other parents who have gone through the same experiences."

Telling your child about the diagnosis

There is no definitive right or wrong way or time to tell your child. Different things work for different children depending on their emotional maturity, social awareness and ability to process what you are telling them. They may not be ready, or able to understand or they may struggle to accept it. If they are not ready, leave it until they are.

When you do speak to them about their diagnosis, it's really important to remind your child of all their good and positive traits, to reinforce that you love them, and that you would not want them to change or be any different. Sometimes it can help to tell them about the many positive role models and famous people who share their diagnosis.

How do you feel about your diagnosis?

"It has two sides, sometimes I am very proud of who I am because I can prove people wrong who think I can't do things because I have a disability, but the other side is annoying because people can label me as just being 'autistic' and I am much more than that."

"I have now come to terms with it because more people have listened to me and I now feel confident to talk about it too and help others understand."

"I like being myself, in a unique way."

✓ Top tips

- ✓ Stay positive and don't let it come across that you are worried or concerned. This range of differences is just a natural variation in the human mind.
- ✓ Emphasise to your child that no two people who are neurodivergent are the same so how they experience something is unique and personal to them.
- ✓ Your child may have lots of questions, feel relieved or find it difficult to process. Be supportive but allow breathing space and time for your child to process this information.
- ✓ Share details of successful neurodivergent role models, who may be famous, or people that you know.
- ✓ The SNAP charity has developed a guide to introducing a diagnosis which includes a range of useful resources (www.snapcharity.org/wp-content/uploads/2021/06/Talking-About-a-Diagnosis.pdf)

"My son was at the final appointment where he was diagnosed so the doctor explained it to him which helped a lot. We explained it very simply, that all our brains are wired up with lots of blue wires and that because he was extra special, he had a couple of red wires that made him feel, think and act differently, but that made him unique. We also encouraged him to share a book with his class called Let Me Tell You About My Autism. The first bit was for him to read to the class and the second part is for the adults. He took it into his school and the teacher took about a week reading it with the class. It helped him take control of his autism, which empowered him."

➤ Further information

It can be helpful to have information or books to support your conversations – we like:

- Talking to children about Autism | Reframing Autism (www.reframingautism.org.au/talking-to-children-about-autism)
- All Cats Are on the Autism Spectrum - Kathy Hoopmann
- When should I tell my child they're autistic, and how do I tell them? - Autistic Not Weird (<https://autisticnotweird.com/when-should-i-tell-2020>)
- Helping autistic children & adults make sense of the social world - Siobhan Timmins (www.siobhantimmins.uk)
- This is a list of books with neurodivergent characters - it may help to share these with your child. Children's Books with Neurodivergent Characters for Kids, Parents, Teachers and Therapists (www.littlebookroom.com.au/neurodiversity)
- There are more helpful books listed in the Useful Information Section at the end of this pack.

What do I do if my child is not diagnosed?

If a child does not receive a diagnosis, this is because the clinician assessing does not feel that there is enough evidence to meet the diagnostic criteria.

A lack of diagnosis should not mean that your child's needs are not supported by their school or other services. By law, reasonable adjustments must be made for a child based on their needs, regardless of diagnostic labels.

Sometimes difficulties can become more evident as children get older, especially for children who have learnt to mask their differences in front of strangers. In these cases, continue to keep evidence and ask either your GP, school, health visitor or educational psychologist for a re-referral for a second opinion. The charity Contact (contact.org.uk/help-for-families/information-advice-services/health-medical-information/all-about-diagnosis/getting-a-diagnosis) may be able to give you advice about your options for referrals, including private assessments.

"We were referred to the paediatrician by my son's infant school. Looking back, we didn't really know anything about autism, other than Rainman and the other stereotypical idea of autism (which we now realise is hugely inaccurate). We didn't believe our son was autistic, he made eye contact with us, we communicated well with each other and didn't think his behaviour was particularly odd. We should have researched it, but just totally rejected the idea and carried on parenting. A couple of years later my friend was getting her daughter assessed for autism and I read a few articles she had shared about it. There were lots of traits mentioned that I didn't even realise were signs of autism and the more I read, the more I realised that my son is autistic and so am I."

Section 5

Education and School

Signs that your child may need extra help

All children are entitled to a fulfilling education, but neurodivergent learners may need extra support to be happy and meet their full potential at school.

Your child's school or pre-school may have already identified that your child needs extra support. However, you know your child and are their best advocate. If you notice that your child has difficulties with some of these things, it may be an indication that they need help:

- Making friends
- Sitting still in class
- Maintaining focus
- Not eating at lunchtime
- Being upset when they go into or come out of school
- Having a meltdown before or after school
- Hiding themselves away and being unusually quiet or withdrawn

- Not wanting you to leave them
- Reluctance to go to school
- Getting into trouble at school for their behaviour
- Finding it hard to learn
- Struggling to follow instructions
- Having difficulty controlling their emotions
- Being overwhelmed by smells or loud noises at school
- Not making progress academically
- Child cannot say what is wrong or worrying them
- Not being able to go to the toilet
- Finding it hard to move from one activity to the next

Or perhaps the school has identified that your child needs support.

What you need to do to get help for your child differs depending on their age.

Support in Early Years

Most early years settings are able to support children with special educational needs and/or disabilities (SEND) without additional funding.

If you are concerned, please speak to your pre-school setting, health visitor or GP, who will work with you to access help. If a

health professional believes that a child has or probably has special educational needs or a disability then they have various duties, including telling the Local Authority.

The Local Authority's duties in respect of early years support is set out in **Section 23 of the Children and Families Act 2014** (www.legislation.gov.uk/ukpga/2014/6/section/23).

Hints and tips for pre-schoolers – Ideas for things that may help at nursery or pre-school

- ✓ Coming in either slightly before or after the other children to so that they can come in at a quieter time and have a more settled start to the day.
- ✓ Being allowed to have a comforter (something they like to carry from home) - some settings may discourage this but it can help to reassure your child.
- ✓ A clock or digital timers can help to visually reinforce all transitions.
- ✓ Not having to follow a strict healthy eating policy – for example being able to drink juice rather than water. For children with a limited diet, it is more important that they are able to eat and drink regularly.

- ✓ A flexible approach to session times to meet the child's needs, for example, shorter session times that can be gradually increased as the child settles.
- ✓ Visual tools such as PECS (<https://pecs-unitedkingdom.com/pecs>), Makaton (www.makaton.org), timetables, photos.
- ✓ Sensory toys, weighted blankets, wobble cushions.
- ✓ Sensory breaks and a quiet place to go to if feeling overwhelmed.

Delaying School Admissions

If your child has development delays and you don't feel that they are ready to start school, you may have the option to delay if you feel that they need more time to prepare.

Deferring a child's start at school at age 4 (so they begin Reception later or start in Year 1 at compulsory school age) can be really positive for some children – but there are potential downsides to consider before you make that decision.

It is not a magic fix and will not automatically resolve developmental, sensory, or emotional needs. It can also delay access to SEND support and school-based assessments.

If you decide that you would like to make a request to delay your child's start, a few options are available to you, including a part-time time-table, a delayed late admission (starting part-way through the year), or waiting a whole year, so that they start school in the next school year, in the September after they turn five.

You will still need to apply for a school place at the same time as everyone else but when you apply let them know you're interested in a later start date. You also need to speak to their nursery or pre-school to ensure that your child can continue to attend for the extra year and that their place isn't allocated to someone new.

www.gov.uk/government/publications/summer-born-children-school-admission

Local services

- Talk, Listen, Cuddle offer lots of advice and free printouts to help you to support your child's development and transition to school
www.tlc-essex.info/resource/preparing-for-primary-school

Educational Support from 4-16 years

Moving from Preschool to school

Starting school can be daunting for our children as well as for us as parents. The more planning you can do in advance of the change, the smoother the transition should be.

Books

- **Starting School** by Allan Ahlberg
- **The Colour Monster, The Colour Monster: A Colour Activity Book, The Colour Monster Goes to School** all by Anna Llenas (Collection 3 Books Set)

“Before my daughter started school, we laid out her uniform and practised changing into it. We also did the walk to school over the summer holidays, and this helped a lot too.”

Support for children and young people of school age

Every neurodivergent child is unique and will have different educational and sensory needs. Some children may require a specialist setting, however, with appropriate support, the majority should be able to thrive in a mainstream environment.

Top Tips for Transition to School

- ✓ Visit the school as many times as possible before your child starts. Many schools have summer fairs or open days, and these can be good ways to familiarise yourself with the school, in addition to any formal visits.
- ✓ Take photos of any key people who will be with your child in school, for example, teacher, teaching assistant, dinner ladies/men, headteacher, lollipop person.
- ✓ Use visual supports to reinforce what to expect during the school day – for example pictures of the cloakroom, toilets, lunch area, playground and where they will sit in class.
- ✓ Perhaps ask the school for a timetable before the September and look at this with your child during the summer holidays.
- ✓ Use social stories. These are short descriptions of a particular activity, event, or situation so that your child will know what to expect in their school day.
- ✓ If your child uses visual supports such as PECS (Picture Exchange Communication system) then it is important that this is available at school.
- ✓ Practise morning routines in advance and get things ready the night before.
- ✓ Use a calendar during the summer to encourage your child to count down to the start day.

Choosing a school

Tips for choosing a setting

It is a good idea to meet the Senco at any schools you are considering, to understand their approach to SEND and their ability to meet your child's needs. You may want to ask about:

- The school SEND policy – the Senco should be able to give you a copy. The school anti-bullying policy, behaviour/discipline and exclusion policies may also be useful.
- What SEND training the staff have received – particularly in the area of specialism that is needed for your child.
- Is the Senco full-time, part-time and/or shared between schools?
- How the school organises its special needs provision - are children withdrawn from class for extra lessons in small groups? How does the school use its support staff? Are there non-teaching staff working in classrooms to support children's learning?
- How many children are in each class?
- Their policy on 1:1 learning support assistants for children. Do they have a dedicated person for each child with an EHCP or do they utilise the class Teaching Assistant?
- How is the day structured? Are there structured breaktime / lunchtime activities for children?

"I asked if my son would be able to use a laptop to support his diagnosed dyspraxia and they said no, so we decided this wasn't the right school for him."

- How is technology used to help learning?
- Whether there is a safe space/quiet area that your child could go to if they needed some time out?
- Schools are becoming increasingly skilled at meeting the needs of SEND children. Ask whether the school has experience of working with children with difficulties similar to your child's, and whether it was successful.
- How they would support your child transitioning to the school.
- How does communication take place between school and parents?

"My daughter and the school were worried about her attending a trip, so we worked together to find out more about the venue, e.g. where the toilets were. I was allowed to come along as an extra adult, which meant that she was able to enjoy the day with her friends."

"The school had a policy that all children must have school dinners. My child is a very picky eater and I asked if he could bring a packed lunch as a reasonable adjustment. The school said no - he either has school dinners or has to go home for lunch. I realised this would not be the best school for him and crossed that school off my list."

The government guidance to schools is set out within the **Special Educational Needs and Disability Code of Practice** (https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/398815/SEND_Code_of_Practice_January_2015.pdf) which states that each school or setting must:

- use their best endeavours to make sure that a child with SEND gets the support they need;
- ensure that children and young people with SEND engage in the activities of the school in an inclusive way, alongside pupils who do not have SEND. They should not be excluded from an activity or school trip because of their SEND;
- inform parents when they are making special educational provision for a child.

It is also helpful to read the school's policies on:

- SEND
- Supporting Children With Medical Conditions
- Behaviour and Discipline
- Inclusion
- Uniform
- Attendance
- Exclusion
- Reasonable force and restraint
- Anti bullying
- Code of conduct

What can I do if my child needs support?

Building and maintaining good relationships with schools

It is important to build a positive relationship with staff at your child's setting so you can work together to get the best possible outcomes for your child.

To help achieve this:

- Introduce yourself to the staff working with your child.
- Recognise when the school, or staff do things well.
- Encourage open and honest communication.
- If there are issues, try to identify solutions for things that could help.

"It was useful to keep a home / school communication book which showed the things that my child found hard in school."

"I couldn't read what was on the board"

"I had no one to play with"

"I didn't eat much lunch today"

1 Stage 1: Speak to your child's main contact at school

Speak with your child's main contact at school (e.g. key worker, class teacher, Head of Year, Pastoral Lead, etc) to discuss your concerns and to understand whether the issues are also being seen at school. It may be that school have also noticed that your child is having difficulties and you can discuss with them ideas and interventions that could help.

2 Stage 2: Speak to the Senco (Special Educational Needs Co-ordinator)

If progress is not being made as expected, you can speak to your school Senco (Special Educational Needs co-ordinator). Sencos have usually had extra training in how to support children with additional needs and may be part of the senior leadership team.

The Senco may suggest that you approach your GP, school nursing team, Paediatrician or social care, for their advice or they may signpost you to information on the Local Offer for your area. Check your school's SEND policy for other ways that they may be able to help.

"The best thing though is that she's on a dedicated SEND pathway through GCSEs. It's a slight reduction in subject slots, but it allows for dedicated support lessons for both emotional and educational support."

They may also decide that your child needs help in one or more of the following areas:

Once the Senco has worked with you to identify the areas where your child requires more support, they should:

Primary School - Help the class teacher to fine tune their teaching to reflect your child's needs. This is sometimes referred to as 'Quality First Teaching (QFT)'. QFT is a style of teaching that focuses on high quality and inclusive teaching for every child in a classroom.

Senior School - Share the One Plan with all subject teachers, Head of Year and any other key individuals.

For Both - Some reasonable adjustments and small intervention groups may also be suggested.

Ordinarily Available

Local Authorities set out a common set of expectations about the provision and practice that is expected in all Early Years settings, mainstream schools and Post 16 providers for children and young people with SEND. This is known as the 'Ordinarily Available Offer' and it is worth checking what is commonly available in your area:

Local services

- SEND - Ordinarily Available (schools.essex.gov.uk/pupils/SEND/Pages/Ordinarily-Available.aspx)

"My child's school has been supporting us since we got confirmation of her place. From making adjustments like a time out card for anxiety, being allowed to doodle in lessons for focus and a toilet card to reduce toilet anxiety, to helping through school refusal, they've just been great. Being able to contact individual teachers by email is fantastic."

Top tips: Preparing for a meeting with the School

- ✓ Understand your child's views.
- ✓ Plan what you are going to ask and what you want to discuss – list these in order of importance knowing what your priorities are and what doesn't matter as much.
- ✓ Have a clear idea of what outcomes you are trying to achieve.
- ✓ Write down the questions you want to ask, for example.
 - Is my child making progress academically and socially?
 - How does my child interact with their friends, peers and staff?
 - What help does my child receive in school?
 - Does the school share the same concerns?
 - How can I support my child at home?
- ✓ Be realistic in what you are asking for.
- ✓ Bring a notebook and pen.
- ✓ You are entitled to take someone (often referred to as an advocate) with you for support, to take notes and to help remember everything that is said. An advocate may be a family member, friend, a local charity offering advocacy services or someone independent provided by the Local Authority if you wish.

After the meeting

- Tell your child what has been agreed.
- Recap the conversation with an email or letter so it is documented or if someone else was making notes, ask for a copy.
- Complete any actions that you were given and make a diary note to ensure other actions are completed as agreed.
- Make sure that a follow-up meeting is arranged if this is required.

Reasonable adjustments

Education providers must make reasonable adjustments to ensure that neurodivergent children and young people are not disadvantaged. However, they may not always know how best to help. We asked other parents to share the things that have helped their child, which are all things you could suggest, and there may be others.

Having a clock or a timer on the table to help focus on starting a task, manage timekeeping, and estimate how long tasks will take.

Extra time for tests and exams.

Sensory fidget toys.

Access to a quiet room.

Visual timetable.

Toilet card.

Sensory and movement breaks.

Being allowed to not go to assembly for example.

Sitting on a wobble cushion.

Pencil/pen grips.

Breaking down tasks into small steps.

Tasks initiations in written format as well as verbal instructions.

It could be helpful if the teacher could inform students beforehand when they will be asked a question in class. Alternatively, the teacher could arrange not to ask certain students questions if they find it particularly challenging.

Having a card to put on their desk or hold up if they are struggling, rather than verbally telling the teacher in front of the whole class.

Reasonable adjustments can help level the playing field for disabled pupils in the classroom. For example:

- A visually impaired pupil is seated to accommodate their field of vision
- Adjusting your snack policy to let a pupil with diabetes have a high calorie snack
- Adapting your school uniform policy for a pupil with allergies or sensory needs
- Letting a pupil go into the dinner hall before other pupils to help their sensory processing
- Allowing a disabled pupil to sit exams in a room for a smaller group of pupils
- Traffic light cards are available for a pupil to communicate who needs extra time
- Coloured paper is provided for a dyslexic pupil
- Allow a pupil with dyslexia and/or dyspraxia to use a laptop to write
- Providing ear defenders to a pupil who is very sensitive to noise to wear as appropriate

If your education provider refuses to provide reasonable adjustments, you can contact them and ask for the reasons why.

- Why do they consider each request unreasonable?
- Who has made the assessment, and what is their role?
- If you have been advised the adjustment you have requested is an unfair advantage to your child, ask for the rationale behind this decision.

“I asked for extra time for my autistic daughter when taking her tests and exams to allow for her cognitive processing speed. This was agreed upon for everything except the drama practical exam. The school told me it would be considered a reasonable adjustment in a written exam but unreasonable in a practical assessment such as Drama.”

Access arrangements and special considerations for exams

Several types of reasonable adjustments can be requested, depending on the reason. Examples include:

- offer alternative formats such as modified exam papers, assessments that can be spoken rather than written, a scribe, and laptop use.
- compensate for cognitive processing variances or physical fatigue such as 25% extra time, a prompter, supervised rest breaks, use of a computer, and taking the test in a smaller room.

If you think that your child will need access arrangements or special considerations in exams, you will need to discuss this with the school as early as possible as evidence over a number of years may be required for the school to make an application to the exam board.

www.jcq.org.uk/exams-office/access-arrangements-and-special-consideration

Department for Education information on Reasonable Adjustments <https://educationhub.blog.gov.uk/2023/04/10/what-are-reasonable-adjustments-and-how-do-they-help-disabled-pupils-at-school>

3 Stage 3: SEND Support and One Plans (Individual Education Plans, Learning Passports)

The next stage of help should be for children who need longer term SEND support to be placed on the school's Special Educational Needs register. Every school has a budget allocated for SEND support. It may sometimes be used to help groups of children, train staff working with SEND children or to help deliver strategies for your child.

For children on the SEND register, an individualised support plan should be created, these may be referred to as One Plans, Individual Education Plans, Learning Passports or SEND Support. You, your child and school staff all contribute to the plan and progress is reviewed termly. One Plans/SEND support should detail the child's needs and what support will be put in place to meet short term and long-term targets. Targets should be for progress in all elements of SEND including Communication and Interaction, Cognition and Learning, Social, Emotional and Mental Health, Academic Attainment and Sensory/Physical needs.

During this process schools are able to request support from outside agencies, such as therapists, the school nursing team, the Mental Health in Schools Team, etc.

Image reproduced with kind permission from Raw Learning

The 'Assess, Plan, Do, Review' Process

The One Plan process should be made up of a 4-part cycle of Assess, Plan, Do, Review (sometimes referred to as the Graduated Approach) and should be co-produced at every stage with the school, family and child:

“My son’s school have really involved him in the meetings and asked him how they could help him, as well as asking us as parents. This made him feel he could open up and be honest with his struggles. They have been very supportive for us both since he started in September - even though we don’t have a diagnosis.”

If your child is still not making progress, academically, socially, or otherwise, you or the school should consider asking the Local Authority to undertake an Educational Health and Care Needs Assessment (EHCNA).

4 Stage 4: Education and Health Care Plan (EHCP)

If you are concerned that this graduated approach has been tried with your child, but progress (academically, socially or emotionally) is still limited, requesting an Education and Health Care Needs Assessment could be the next step.

What is an Education and Health Care Plan (EHCP)?

An EHCP is a legal document that sets out a young person’s special education needs and the support that they need. It covers birth until age 25 (if they remain in education and training) and can result in additional support and funding for a child or young person with special educational needs.

How do I get an EHCP for my child?

An Education, Health and Care Needs Assessment (EHCNA) is the first step towards getting an Education and Health Care Plan (EHCP).

Who can request an EHCNA?

The following people can request an EHCNA:

- the child or young person’s parents
- the young person themselves (i.e., someone over the age of 16) or someone on their behalf if they lack the mental capacity to do so
- a person on behalf of the child or young person’s school

- professionals involved with the child or young person, such as foster carers, health and social care professionals, and early years practitioners.

Whilst the school usually makes the application, sometimes schools may not feel that an EHCP is necessary, for example, if a child masks at school. As a parent, you can request an EHCNA if you feel your child is struggling in school or not making enough progress.

Criteria to apply for an EHCNA

In law (section 36(8) of the Children and Families Act 2014), the following are the only questions the LA should ask when considering whether or not to carry out an EHC needs assessment:

- whether the child or young person has or may have special educational needs (SEND); and
- whether they may need special educational provision to be made through an EHCP.

There is additional guidance in the Send Code of Practice section 9.

EHC Needs Assessment Myths

There are a few myths and confusing views surrounding the EHC assessment process. Here are a few of them...

?

?

?

?

?

?

?

?

?

?

Before you can apply for an EHC Needs Assessment

MYTHS

- Your child must have a diagnosis
- Your child must be x years behind academically
- You must have x number of One Plans via the process of Assess, Plan, Do, Review
- The school must have spent £6,000 on help for your child
- Children need to be in school for a given period of time before you can apply

The EHCP process can be quite technical, but there is lots of help available.

Local advisory services

- SEND Information, Advice and Support Service (SENDIASS) listing (send.essex.gov.uk/search-support-groups-and-activities/send-information-advice-and-support-service-sendiass)
- SENDIASS Southend (www.sendiasssouthend.co.uk)
- SENDIASS Thurrock (<http://www.patt.org.uk>)

- Nation-wide services:
 - IPSEA - Independent Provider of Special Education Advice (www.ipsea.org.uk)
 - SOS SEN | The Independent Helpline for Special Education Needs (www.sossen.org.uk)
- Local charities and support groups which you can find on your Local Offer or search for on Google/Facebook.
- There are lots of individuals offering help with EHCPs, please check their qualifications and ask for recommendations from other parents before agreeing to pay any fees.

Overview of the process

If the assessment and plan are agreed, it should take no more than 20 weeks from the point when an assessment is requested by the parent/school until the final EHC plan is issued, although in some areas this can take longer. There are some exemptions to this such as school holiday dates. The application will be acknowledged when received by the Local Authority and progressed in line with the

timeline. You may wish to make a note of the dates so that you can track the application.

Local authorities must tell you whether they will carry out an EHC needs assessment. within six weeks of receiving the request. IPSEA provide guidance on what to do should this not happen (www.ipsea.org.uk/complaining-if-the-la-does-not-respond).

Overview of an EHCP

EHC plans are not standardised, as each local authority can adopt its own format. However, certain sections must be included to comply with the law.

Ipssea have created a really helpful overview: EHC Plan Checklist (www.ipsea.org.uk/Handlers/Download.ashx?IDMF=afd8d11f-5f75-44e0-8f90-e2e7385e55f0)

EHCP sections (A-K)

- A** The views, interests and hopes of the child and their parents or the young person
- B** The child or young person’s special educational need (SEN)
- C** Health care needs relating to their SEN
- D** Social care needs relating to their SEN or to a disability
- E** What the outcomes of the support are hoped to be
- F** The special educational provision needed to meet their SEN
- G** Any health care provision needed to meet the child or young person’s needs
- H** Any social care provision required from social services under the Chronically Sick and Disabled Persons Act 1970 and/ or to meet the needs of the child or young person
- I** The name of the school to be attended by the child or young person and the type of place of education (this should be left blank on the draft document and is only put into the final document)
- J** Details of any direct payments
- K** Copies of all the advice and information for the EHC needs assessment.

What do I need to do?

- Complete section A
- Check the draft EHC Plan
- Ensure outcomes are SMART
- Name your preferred school or education setting

Complete section A

When you write the parent section, think about including strengths and difficulties.

Nobody knows your child better than you do.

There’s no right or wrong way to complete this section but try to make the information as clear and concise as possible.

The views of children and young people are very important and will be included in the final EHCP. It is useful to focus on areas that educational settings or other professionals writing reports may not be aware of.

Examples that some parents have shared:

- My child communicates by Picture Exchange Communication System (PECS)
- When my child is older, she wants to go out and have fun like her friends.
- My aspirations for him would be to enjoy his education, be fit and healthy, have friends, and maybe go to college or find employment.
- My daughter needs extra time and support daily and often relies on an adult to help her.

- He does not like certain foods, and I would love him to make and eat a sandwich independently.

Check the draft EHC Plan

If it is agreed that an EHCP should be issued, you then have 15 days to suggest any amendments and to express a preference for an educational setting.

Ensure outcomes are SMART

SMART goals are used to help guide goal setting. SMART is an acronym for Specific, Measurable, Achievable, Realistic, and Timely.

- S** Specific;
- M** Measurable;
- A** Achievable;
- R** Realistic;
- T** Time-bound.

SMART goals ensure that the provisions/outcomes for your child are clearly set out and defined. If there are words which are vague, these could be misinterpreted, and may dilute the provision that is provided. Words and phrases like ‘regular or as required’ can cause particular difficulties so should be avoided.

Example of a SMART target

• Section A (aspirations)

Megan wants to build meaningful relationships with others and have friends.

• Section B (needs)

Megan struggles with her social skills.

• Section F (provision)

Megan will participate in a 15-minute daily group session with up to three students, led by a Speech and Language Therapist, where they will focus on social skills and engage in role-play activities.

• Section E (Outcomes)

Short Term: Megan will have successfully built two solid friendships and enjoy spending time with them at least twice a week during breaks and lunchtimes.

Long Term: Megan can maintain healthy relationships with her peers.

Naming your preferred school, college, or provision

The provision will be named at the draft EHCP stage. You can ask the LA to consider:

- A maintained school or nursery (mainstream or special)
- An Academy (mainstream or special)
- A Further Education setting
- A non-maintained special school
- A section 41 (independent) school.

When you get the **draft** EHCP, you have the right to ask for a particular school or college to be named. The local authority must consider your request and consult with the school, but they make the final decision.

Before a school is named in the **final** EHCP, the local authority must consult with the school or college. The school can say if they don't think they can meet your child's needs, but the final decision rests with the local authority, not the school.

If the LA decline to consult with the school of your choice, you can follow IPSEA guidance: www.ipsea.org.uk/complaining-when-the-la-will-not-consult-with-the-school-or-college-you-request

You have a legal right to request that a particular school or college is named in an EHCP.

If the EHC assessment is declined

If the request is declined, this is usually because the information provided suggests that a young person's needs could be met at SEND Support level, which is why it is so important to ensure that the LA has accurate information about both the support that is needed and also the type and amount of support that is currently in place. Remember that lots of first-time applications are declined but you can appeal. If you are considering appealing you must contact Mediation within 2 months of receiving the LA's decision letter. Please see the IPSEA guide for details of the mediation and appeals process. www.ipsea.org.uk/mediation-what-you-need-to-do.

SEND Appeals

You can appeal to the Special Educational Needs and Disability Tribunal if you disagree with a decision your local authority has made about a child or young person's education, health, and care (EHC), needs or plan.

You can appeal if they:

- Refuse to carry out an EHC assessment or reassessment
- Refuse to create an EHC plan after carrying out an assessment or reassessment
- Refuse to change the sections of an existing EHC plan which are about education (sections B, F and I)
- Cease to maintain an EHCP

You have two months from the date on the Local Authority's decision letter not to issue an EHC plan to submit your appeal.

Check if you can get legal aid to help pay for legal advice: www.gov.uk/check-legal-aid

Contact details to make an appeal:

- Lots of useful information is available on the Ipsea website. Appealing to the SEND tribunal (www.ipsea.org.uk/appealing-to-the-send-tribunal)

Annual reviews

Once agreed, EHC plans must be reviewed by the LA annually (as a minimum) to revisit and review the outcomes and the effectiveness of the provisions in place to achieve them.

Before the annual review meeting, parents, professionals, and the education setting that your child attends share their thoughts about what is going well, what is not going well, aspirations and anything that they think may need to change within the plan. The information should be gathered and shared two weeks before the meeting.

All professionals that provide the support detailed in the EHC Plan should be invited to contribute and to attend the meeting.

Top tip

- ✓ Keep a record of the date of your last annual review and contact your school a month before the anniversary to request a meeting if you haven't received a meeting invitation

Preparing for an annual review

- Read through all the comments submitted. You should receive this at least two weeks before the meeting. If you don't feel you have enough time to prepare then you can ask for the meeting to be deferred.

- Make a note of any questions that you would like to ask. There can be a lot of information shared in these reviews so it's really helpful to have a written list to refer to.
- Take notes during the meeting so you have a record of what was discussed and agreed.
- Consider taking an advocate, family member or friend with you for support.

Outcomes

At the end of the review, there are three decisions the Local Authority can make:

- 1 To **maintain** the EHC plan in its current format (not make any changes);
- 2 To **amend** the EHC plan;
- 3 To **cease** the EHC plan if, following consultation, they think it is no longer necessary for it to be in place.

If your child is coming up to a phase transfer (for example, moving from primary school to secondary school), the LA must carry out the review well in advance of the move.

For those transferring from secondary school to a post-16 provision, the EHC plan must be reviewed and amended by 31 March in the year of transfer; for all other phases of transfer, the deadline is 15 February in the year of transfer.

Further information

IPSEA and Special Needs Jungle provide an excellent overview of the annual review process, how things should work, timelines and what to do if things don't go as planned.

- www.specialneedsjungle.com/wp-content/uploads/2021/03/Annual-Review-Flow-Chart_21.png
- www.ipsea.org.uk/annual-review

“In my daughter's EHCP she had sensory breaks which really helped her to regulate her emotions during the day at school. Things were going so well, school decided that these breaks were no longer needed, but this resulted in my daughter having problems again. It is really important to recognise what is working well and keep these measures in place.”

Home to School Transport

For children under 16

For children under 8 who live more than two miles away from their nearest suitable school (3 miles away for children over 8), Local Authorities must make free-of-charge travel arrangements to facilitate the attendance at school of eligible children and young people of compulsory school age.

In addition, for children with SEND, if your child cannot reasonably be expected to walk to school because of a special educational need, disability, or mobility problem, they may be entitled to free school transport, regardless of the distance they live from the school. Local Authorities will assess eligibility on a case-by-case basis. The Government Guidance provides some helpful examples on eligibility assessments).

- Government guidance on Home to School Transport (www.gov.uk/government/publications/home-to-school-travel-and-transport-guidance)
- Apply for school transport for a child with special educational needs and disabilities (www.gov.uk/apply-school-transport-for-child-with-special-educational-needs-sen)

Local information

- Getting to school or college - Essex Local Offer (send.essex.gov.uk/help-learning/getting-school-or-college)
- Home to School Travel or college travel support - Ask Thurrock (www.patt.org.uk/sen-transport)
- Home to School Transport for children and young people with SEND (www.livewellsouthend.com/transport and www.southend.gov.uk/etc)
- Transport | Essex Family Forum (essexfamilyforum.org/portfolio/transport)

Transport for eligible children must be suitable for their needs. These requirements are defined in sections 508A, 508B, and schedule 35B of the Education Act 1996

Post 16 transport

For young people aged 16 to 19, each local authority must publish its own Transport Policy/Statement setting out the arrangements for specific groups of young people (as detailed in the Education Act s509AA).

The needs of young people with special educational needs and disabilities should be specifically considered, as well as those of the most vulnerable or socially excluded. They should consider individual circumstances and provide the necessary support to enable them to attend their educational establishment.

There is, however, no requirement to provide free-of-charge transport arrangements and most, Local Authorities have implemented a charge for 16-19 transport. It is likely that, even if your child does not change their education setting, you will need to re-apply for transport in addition to making the required payment. You should refer to your Local Authority's website and/or Local Offer for full details.

- Government guidance - Transport to education and training for people aged 16 and over (www.gov.uk/government/publications/post-16-transport-to-education-and-training)

Further information

- Ipsea guidance - Young people aged 16 to 19 | (IPSEA) Independent Provider of Special Education Advice (www.ipsea.org.uk/young-people-aged-16-to-19)
- SENTAS – Special Educational Needs Transport Advocacy Service (<https://sentas.co.uk>)

Travel training

Your local council may offer travel training' which can help young people to develop the confidence and skills to travel independently on buses, trains and walking routes.

You can also practice using public transport with your child and familiarise them with helpful walking routes.

Transition from primary to secondary school

What is different about secondary school?

A child with SEND may take a long time to get used to the new school environment and may need additional help to support them throughout this period.

If there has been insufficient preparation for the huge changes that occur between primary and secondary school, this can result in difficulties accessing the curriculum and make it harder to make friends. The first few weeks are crucial in developing the new peer group and poor preparation can result in ongoing difficulties throughout their secondary school years.

Here are some of the changes that your child might notice:

- Classes may be larger.
- Need to move around the school between different lessons.
- Different teachers for each subject and being split into sets, which means you may not be with friends in every class.
- Bigger school environment and not all teachers will be aware of your child's difficulties.
- Coping alone in the playground a break and lunchtimes, with fewer teachers supervising.
- No personal desks.
- The use of lockers to store belongings.
- Independent travel to school.
- Homework – greater volume and increased expectations.
- The need for greater organisational skills and meeting deadlines.
- Career choices at a time when the child may not see they have any strengths.

Without planning and support, the cumulative effect of all these changes may lead to your child becoming increasingly anxious. They could feel out of control in their new environment, after seemingly being able to cope in primary school.

Spend time talking to your child about all of these things so that they can understand what to expect and have a chance to ask questions about anything that may be worrying them. Refer to the transition information regularly in the period leading up to the move, to help refresh the information and trigger questions.

There are other children who struggled at primary school but who enjoy and adapt well to the independence and increased responsibility at senior school.

“I hated junior school. We were forced to make eye contact and sit completely still and if I didn't finish my work, I had my break taken away. Senior school is so different. I get a break between lessons when we move classes and I'm much happier now.”

Top tips for moving to secondary school - working with the school

- **Transition workbook** – address differences between settings with a step-by-step approach. You can ask your existing setting to provide this.
- **Phased transition** – ask your new Senco or existing teacher whether it is possible to arrange additional visits. It can help to become familiar with the new school at different times, find their way around and have additional opportunities to ask questions.
- **Meeting key members of staff** – for both you and your child. This could include their form tutor, pastoral lead, members of the SEND support team etc.
- **Photos of the new school and key staff** – ask your new Senco at the new school for photos of key members of staff that will be working with your child and of the new building, you can include a map of the school if there is one. You can also look for additional information about the new setting, for example the school's website and social media, and share this with your child.

- **Lockers** – speak to the new Senco about whether having a locker at school may help your child to organise their equipment. A locker may be a good place to keep spare stationery.
- **Timetable** - ask your new school for a sample Year 7 timetable or if the school have a school app which loads timetables or homework. Start looking at this in the summer break.
- **A buddy system** - ask your new Senco if there is a buddy system that your son or daughter could have for at least the first two terms.
- **Gain the views of your child** - Talk to your child. Ask them if anything is worrying them and see what you can do to help.
- **Share one-page profile** – Ask your existing Senco to share your child's up to date one-page plan with all staff that will be working with them.
- **Communication** – find out the best way to communicate with staff at the school – for example, having a named contact, and whether it is best to communicate via phone or email.

- If your child struggles to change quickly for PE, perhaps they could wear a clip-on tie, or wear adapted PE equipment.
- If your child is anxious taking tests in the classroom, perhaps they could take the test in a small group in a different room.
- If your child may be easily distracted in class, discuss potential seating options.
- Pencil grips, adapted rulers and protractors etc. may help.
- If your child struggles with homework, ask whether there are options to complete homework at school either in a homework club, or during the school day.
- If your child may feel overwhelmed in class, or if they struggle knowing when they need to go to the toilet, consider a time out or toilet card so that they can easily leave the classroom.
- If your child finds it difficult to write notes during a class, see if handouts could be provided to capture the key points.
- Ask if there is a quiet place your child can go to at break and lunch times, such as the school library or SEND department.

Top Tips

Keep a homework diary

Explicitly teach executive functioning and study skills

Give an extra 3-5 minutes to organise before transitions

Schedule a weekly organisation time

Create routines and practice them often

Incorporate movement during instruction

Create an end-of-the-day checklist to remember materials

Provide brain breaks during and after instruction

Clearly explain academic and social expectations

Keep an extra set of books at home and in the classroom

Use countdowns and time checks during work periods

Have students set up homework binders

Your Senco will probably have lots of other suggestions too!

“My sons school took him out of French in year 7 and he does ‘support lessons’ instead. They have also arranged for him to go into school early, so he isn’t at the gate with noise and crowds. He has a 5-minute early pass to avoid the busy corridors and to leave school before the bell. He only had to choose two options instead of three.”

What you can do at home to support your child at school

- 1 Get everything ready the night before.** Get everything ready that they are going to need in advance including backpack; uniform; PE kit; stationery; books etc. and decide whether they are going to have a school lunch or packed lunch.

- 2 Getting dressed for school** - Children with sensory issues can be overly sensitive to the way different textures of clothing feel on their skin. They might not be able to tolerate the feeling of new shoes because the material is too stiff. Their reactions to items like itchy sweaters or stiff trousers can range from annoyance to outright refusal to wear something. Being aware of what triggers negative reactions in your child can help. For instance, cut off clothing labels if they bother your child. Small adjustments could reduce complaining—and help to get you out of the door faster. You could also pre-wash new clothes to soften them, or wear new shoes in before the first day of term.

Top tip – some clothing retailers offer sensory-friendly school uniform options.

- 3 Set a bedtime routine.**

“I’d suggest getting up 30 minutes before you think you need to!”

- 4 Organise your morning routine.** It is important to set rules or routines in advance, and these can be very detailed if that is needed. You can arrange a routine that includes timescales, for getting up, getting ready, eating breakfast, having some down time, preparing to leave, and even includes the route that you will take to school.

- 5 Stock up on school supplies and buy spare uniform if possible.** A second set of school supplies, uniform and equipment should be kept at home that is the same as the one that the child is using. This will be very important if your child loses anything during the school day.

- 6 School day plan** - have a copy of your child’s timetable and talk to your child about what they will be doing each day. If the timetable is available on-line or via an app, consider writing it out for them so that they have the reassurance of having a visual copy too.

- 7 Decompress** - have calm and quiet time after school so your child can self-regulate. Have calm and quiet time, or do something to burn off energy – whatever they need to do, to clear their heads.

“I bought a cheap whiteboard and wrote out the timetable for the next day so that my daughter could see it when she woke up.”

- 8 Create a safe place** at home where your child feels safe and can retreat for some down time.

- 9 Accept that your child is different** and let them lead on how they feel, what will help them cope and what they feel able to do. Always validate your child’s feelings and emotions. Believe your child when they say it is noisy, stressful, smells funny, etc. and help them to find ways to manage these problems, rather than telling them they will get used to it.

- 10 Travelling to school** – Take the journey with your child between home and school (whether you walk, drive, or take public transport), as many times as you can before the school term starts. You could also film the route as you go, take photos, or look at Google Streetview to help your child to learn their journey. This will help to make the experience more predictable, which will help anxious children to cope in unfamiliar surroundings.

If your child uses the Local Authority transport service, speak to the transport provider to find out more about the journey, e.g. the route they will take, how many other children will be in the car, how long it will take, where the collections/drop-offs will be, will there be an LSA on board, who is the driver and what happens if traffic is bad and there are delays.

What happens if your child is unable to attend school?

If a child is struggling to go into school, this could be because

- They are poorly or recovering from an illness.
- They have an ongoing medical condition.
- They feel anxious, worried, or unsafe in school.
- Their special educational needs aren't being supported properly.
- There are family reasons, like a bereavement or needing extra support at home.
- They have previously been excluded.

For further information and services/groups that can help please see below.

- **Not Fine in School** is a parent/carer led organisation set up in response to the growing number of children and young people who struggle with school attendance (<https://notfineinschool.co.uk>)

- Check your Local Offer for support available in your area

Local services

- **Education Access Team** - if child has missed 15 days or will miss 15 days due to disability, medical, mental health or pregnancy, this team works with families to look at options (https://schools.essex.gov.uk/pupils/Education_Access/Pages/default.aspx)
- **Essex** - SEND Information, Advice and Support Service - Telephone: 03330 138913 or email: send.iass@essex.gov.uk
- **Thurrock** - Special educational needs and disability (SEND) 'Local Offer' | Thurrock Council (<https://www.thurrock.gov.uk/special-educational-needs-and-disability-send-local-offer>)
- **Southend** - Inclusion Service and Guidance on School Exclusions | Southend Learning Network (<https://southendlearningnetwork.co.uk/Services/6037>)
- Elective Home Education Hub - Your say Southend (<https://yoursay.southend.gov.uk/elective-home-education-hub>)

? Did you know?

- If your child is (or will be) off for 15 days or more due to health reasons, the school must inform the local authority. Together, they have a legal duty to arrange suitable education — for example, work at home, online learning, or home tuition. This applies even if the absences aren't consecutive.
- If your child's anxiety or mental health needs continue, ask the school to help with a SET CAMHS referral, or you can self-refer directly. Early support can make a big difference.
- Schools use attendance codes to record the reason for each absence. Code I is used when a child is absent due to illness — this includes physical illness and mental health difficulties, such as anxiety linked to a disability or neurodivergence. If your child is struggling to attend because of anxiety or overwhelm, this should still be marked as Code I (Illness) — not unauthorised. You don't always need a GP note or CAMHS letter. If your child's anxiety is part of their condition, you can explain: "My child is experiencing anxiety linked to their disability."

What are the alternatives to school?

Education other than at School (EOTAS)

If you already have an EHCP, before you consider elective home education, you may wish to ask your Local Authority about an EOTAS (Education Other Than At School) package. It's an arrangement for children and young people who, for a variety of reasons, cannot attend mainstream school. Local authorities must make sure these pupils still receive a suitable, full-time education.

EOTAS can include:

- Tuition at home
- Online learning
- Specialised tutoring
- Education provided in community settings, hospitals, or at other alternative provisions

> Further information

- Elective Home Education - www.gov.uk/government/publications/elective-home-education
- Find more information on the IPSEA website - www.ipsea.org.uk/home-schooling-and-education-otherwise

Elective Home Education

Some parents decide that a formal education within school is not suitable for their child. Others may see it as the only option due to circumstances, such as a lack of places at specialist schools.

If you home educate, you will be responsible for all the associated costs, including stationery, books, tutor costs, educational trips and exam fees.

Exclusion

This isn't a pleasant topic, but unfortunately it is a necessary one because government statistics show that exclusion rates are higher among special educational needs (SEND) pupils. It is 5 times more likely that a pupil with SEND will receive a fixed period exclusion.

Under the law, head teachers can only exclude pupils for breaches of the school's behaviour policy and where allowing the pupil to remain in school would seriously harm the education or welfare of the pupil or others in the school.

They cannot exclude a pupil for behaviour resulting from having special educational needs, or because they cannot meet their needs. If you think an exclusion has occurred for one of these reasons, you could make a claim under the Equality Act 2010 and suggest a managed move to a provision which can better meet their needs.

Further information

- Exclusion from school (<https://contact.org.uk/help-for-families/information-advice-services/education-start/education-learning/exclusion>)
- Child Law Advice (<https://childlawadvice.org.uk/information-pages/school-exclusion>)

My child has been excluded. What do I do?

1. Try to remain calm so that your child can see that you are in control of the situation.
2. Don't immediately make a judgement about what has happened. Emotions are likely to be running high for you and your child, but they need to know that you are there to support them.
3. You will receive a letter from the school, giving information about the length of the exclusion and what you should do. It also contains details of how to challenge the exclusion if you do not agree with it: School discipline and exclusions: Challenging exclusion - (www.gov.uk/school-discipline-exclusions/challenging-exclusion)
4. Write to the school to ascertain exactly what happened, how your child breached the Behaviour Policy and the circumstances surrounding the incident. Keep records of all correspondence, emails and conversations. Follow up all conversations in writing, setting out what was said and agreed and asking for the school to confirm the contents are a true reflection of the conversation.
5. After a fixed term exclusion, a re-integration meeting is usually held to help the child/young person adjust back into school. Consider the circumstances which led to the exclusion and whether additional support may be needed to minimise the chance of this happening again.
6. If your child has been permanently excluded then it is the responsibility of the LA in which you live to provide full time education from the 6th day since exclusion.

What the school can't do – illegal exclusions

- A school cannot ask you to collect your child following an incident at school, without following the proper procedures. For an exclusion to be lawful a letter has to be sent to the child's parents, immediately after the exclusion,
- A school cannot ask you to collect your child due to a staff member being off sick, or if there is an activity that your child will not engage in, or because they cannot meet their needs.
- If the school suggests that your child attends school on part time basis, they can only do this with your agreement. There should be clear review dates set and an expectation that you will work together to support your child in their return to full time education as soon as possible.
- If you feel that your child has been discriminated against because of their disability, you can contact the Equality Advisory Support Service (EASS) who provide information and advice about discrimination and human rights issues. EASS helpline:
 - Telephone: 0808 800 0082 / Textphone: 0808 800 0084
 - Monday to Friday, 9am to 7pm; Saturday, 10am to 2pm

As a last resort you can make a disability discrimination claim via this form www.gov.uk/government/publications/form-send4a-disability-discrimination-claim-by-a-parent

What is an Educational Psychologist (EP)?

Educational Psychologists (EPs) are trained professionals who apply psychology—the study of how we think, learn, feel and behave—to support the development, learning and wellbeing of children and young people up to the age of 25.

They work with families, schools and other education settings to help understand and respond to a child's needs.

How do EPs get involved?

Every Local Authority school (including academies) has a named link EP. They work in partnership with school staff—usually the SENCO or Headteacher—to offer advice and support.

EPs are also involved in providing advice to the SEND team as part of the Education, Health and Care Needs Assessment (EHCNA) process, and may contribute to tribunal cases.

If you're concerned about your child's progress, the first step is to speak with the SENCO at your child's school or setting.

How can an EP help?

An EP can be especially helpful when a child or young person is experiencing significant learning, emotional or behavioural difficulties that are complex, persistent, or not improving despite support already in place.

They work in a person-centred way, which means they focus on understanding the child's unique strengths and needs. This might involve:

- Talking with the child or young person
- Observing them in class
- Speaking with key staff and family members
- Using psychological assessments or tools

The aim is to build a shared understanding and agree on practical strategies to support the child's learning and wellbeing.

Local services

- **In Southend** you can contact the **Southend Educational Psychology Service** on **01702 215909** or email epadmin@southend.gov.uk. They can give you advice and overview the support that you can expect from school.
- **In Thurrock** you can contact: admineducation@thurrock.gov.uk to find out more about support by schools and the Educational Psychology Service.
- **In the rest of Essex**, you can contact the EP Parent Helpline which is available on alternating Mondays and Tuesdays between 1pm and 5pm. Term time only. You can book a 25-minute appointment in advance via Microsoft TEAMS. **EP parent helpline**. An EP will listen to your concerns and discuss ideas, and help you consider what to do next.

Inclusion

Section 100 of the Children and Families Act 2014 places a duty on schools to support pupils with SEND at school. This means that they must ensure that all children with medical conditions, (physical and mental health), are properly supported in school so that they can play a full and active role (be included) in school life, including school trips and physical education, remain healthy and achieve their academic potential.

Local services

Local authorities have teams that provide additional support to schools to help them to be inclusive.

- <https://schools.essex.gov.uk/special-educational-needs-and-disabilities-send/send-services-and-support/send-inclusion-and>
- Special educational needs and disability (SEND) 'Local Offer' | Thurrock Council (<https://www.thurrock.gov.uk/special-educational-needs-and-disability-send-local-offer>)
- <https://southendlearningnetwork.co.uk/Services/6037>

If you notice that your child is not fully accessing the curriculum; for example, is regularly being taken out of class, not being allowed on school trips, receiving sanctions etc., this may be an indication that more help is needed.

You can be proactive in promoting diversity and inclusion by asking the school to help to support inclusion of all students in lessons and assemblies, to teach all the children to be accepting of people's differences, including neurological ones.

Bullying

We hope it never happens to our children and also that our children are never called a bully, but children with SEND are three times more likely to be bullied than their non-disabled peers, according to research carried out by the Anti-Bullying Alliance (<https://anti-bullyingalliance.org.uk/tools-information/advice-and-support/advice-parents-and-carers>).

Neurodivergent children can be especially vulnerable. Their unique ways of communicating, thinking, and moving often make them stand out, which can unfortunately lead to them being targeted. Because of differences in social understanding, they may struggle to recognise when someone is being unkind, and may find the idea of "banter" particularly confusing. To help understand any patterns of behaviour which may be affecting your child, consider keeping a record of incidents and taking screenshots of copies of messages on social media.

Dealing with bullying - a guide for parents and carers (<https://www.autism.org.uk/advice-and-guidance/topics/bullying/bullying/parents>)

Education post 16

The Preparing for Adulthood Team will support your child into employment or further education.

We have provided more details in the [Growing Up section](#), and there is lots of useful information on the [Contact website \(https://contact.org.uk/help-for-families/information-advice-services/education-learning/education-beyond-16\)](https://contact.org.uk/help-for-families/information-advice-services/education-learning/education-beyond-16).

Section 6

Day to Day Life with a Neurodivergent Child

Family and friends

This section is full of hints and tips from other parents to help you manage personal relationships and day to day activities.

Extended family and friends can offer you a great deal of support, but having a neurodivergent child can change the way that you interact with your family and friends. Give it time! Be patient, it may take a while for your family and friends to understand. Some people will naturally be inclusive and understand, and there are others who for a number of reasons may find it more difficult to be accepting.

You can share the information in this pack with family and friends to help them understand your child's needs and the challenges that you face.

“Some members of our family do not believe the diagnosis. I absolutely see it now. But it is frustrating that some people think I’m neurotic when I didn’t think a diagnosis was needed in the first place. Outside professionals did, and they were right.”

Understand how family and friends may be feeling

Try to understand how others may be feeling. Relationships often change when we have children – but this may be more apparent when you have a child with SEND because we have to be their advocate and adjust our lifestyle and habits to meet their needs. This may mean that you have less time to spend with other people and may have to cancel or change plans at the last minute. You may not have the time, energy or resilience to be able to support your family and friends in the same way that you did in the past. You shouldn't feel guilty about this, but it can be helpful to recognise that it happens so that you can work together to maintain a positive relationship throughout any challenging times.

Although some people know about autism or being neurodivergent, there are also many people that have no experience at all or have preconceived ideas from newspapers/films/TV that are inaccurate. Be careful not to give too much information at once; the key to building support is helping family and friends to understand how your child is affected, and to help them feel included.

A Grandparent's perspective

We asked some grandparents what advice they would give to other grandparents:

“Celebrate and enjoy successes - no matter how small.”

“Be a natural part of their lives if you can.”

“Get the parents to recognise that their own health needs, both mental and physical, are important and if you can, give them a chance to have a break to get time on their own.”

“Accept and enjoy them for who they are.”

“Expect that the parents will be very stressed and maybe resentful or frightened.”

“Initially I was angry and upset, then I wanted to do as much as I could to help. A few years on, I realise that it's my son and daughter-in-law that need as much help as possible because they are going 24 hours a day and need some respite and leisure time.”

“Find things that they like that you can do together – like going out for a cake.”

Dispelling the myths

Awareness and acceptance of neurodiversity is growing but there is still a lot of confusion around what causes it and how it affects people in different ways.

Some of the misinformation that you may encounter and wish to address:

- It is not a curable disease and you do not grow out of it – it is a lifelong condition that with the right help can be effectively supported.
- We know it is not caused by vaccines. (2013 Centre for Disease Control study showed that there is no link between MMR and autism and the theory was discredited)
- It is not caused by bad parenting – neurodivergent children can present with behaviour that challenges as a result of sensory and other needs which are not being effectively supported. Parenting courses tailored to SEND children may help improve understanding.
- Not only boys are neurodivergent. It appears to be more common in boys, but girls are more likely to mask and are often diagnosed at an older age.
- Autism and ADHD are not in themselves mental health conditions, but many autistics/ADHD suffer from anxiety and/or depression, due to a variety of reasons including unmet needs, inadequate support and social isolation.
- Being Neurodivergent is not caused by a bad diet, but certain artificial additives and food sensitivities can exacerbate symptoms in some children.

“I found it useful when talking to grandparents to point out that back in the day children were punished for being left-handed. We now know that being left-handed is a neurological difference and not something that you should try to cure.”

Sharing a diagnosis

Knowing that a child is neurodivergent can trigger a range of emotions and reactions in others in the same way that it will for you. Some common reactions that you may encounter:

- Sometimes it is a relief because it gives an explanation.
- Sometimes relatives may feel sad or worried.
- They may be in denial and reject the diagnosis, which may make you feel isolated and hurt.
- They may be judgmental and blame you – for example if they don't see difficulties themselves because your child masks, or if they blame your parenting style.
- Being neurodivergent is often a genetic condition, so it may be that when a child receives a diagnosis, other people in the family may start to be aware of their own quirks.

Let your family and friends express their views and feelings, but it is also important for you to feel supported so you can say that you welcome their support and understanding.

Educate friends & families

General information

There is a lot of information available so be careful not to overwhelm them.

Information specific to your child

The information in this pack is helpful as background, but the most useful information you can share with others is to let them know the things that are important to your child – the things that will help and comfort them, and the things that they will find difficult.

Talk through their routine and how it is important to stick to it where possible. Let them know of sensory issues and particular routines for example, around time, food, noise, smells, bedtime routine etc.

Neurodivergent people will display unique strengths and difficulties and experience characteristics of their disability in different ways.

“If you have met one individual with autism... you have met ONE individual with autism.”

Dr. Steven Shore

Share the successes

Whilst you will naturally share details of the challenges that you and your child may face, remember to share the achievements and fun moments too. Try to be patient, it may take a while for your family and friends to understand.

Make New Friends for Yourself and Your Child

Joining a support group in your local area can help you to understand more about your child and validate how you are feeling. You will also meet other like-minded parents and carers who can provide non-judgmental advice and emotional support. You can search on social media for your local town, the condition and SEND to find groups near you.

“My child always liked to eat lunch at 11.30. We went to my in-laws for Sunday lunch - which they always had at 1pm. They refused to let my son snack beforehand in case it ruined his appetite. Needless to say, we had to go home before 1pm!”

“I took my daughter for a play date with a friend, when we arrived, she had invited another friend too. My daughter hadn’t expected it and was really upset and completely unable to speak to the other girls. It was really difficult and we just had to go home”

“My son went to a friend’s house for a playdate when he was 5. When I collected him, the mum said ‘it’s been awful’. I was so embarrassed and spent the whole night dreading the school run the next day. We got over it though, and now she understands she has become a good friend.”

Case studies

Families have shared some of the difficulties that they faced, which may help you to plan in advance how you could prepare for similar situations.

“Every time I started to explain my child’s difficulties, I found my parents were judgmental. I got defensive and upset and it ended up in an argument. In the end I shared their one-page profile from school and it really helped. I have since created one for home that I have given to my sister and also to helpers at various clubs.”

“My parents used to get really upset when my son bounced on the settee and it became a real bone of contention between us, even to the point that I no longer wanted to go to their house. However, when we understood more about why he did this, I explained to my mum and they bought him a little mini trampoline, which he loves, and no more bouncing on the settee!”

Help for Siblings

It's very natural for your other children to wonder about their sibling and to ask questions like:

- Why does my brother or sister act differently to me?
- Why do they get more of your time and attention?
- Why are you stricter with me sometimes?
- Why don't they have to do chores like I do?

They might also feel embarrassed if their sibling behaves in a way that stands out in public, at school, or when friends are around.

Providing reassurance

It's important to remind them that you love all your children equally. Let them know that everyone in the family has different needs, and sometimes their sibling may need more support—but that doesn't mean they are less important.

Look for activities they can enjoy together, whether that's a game, art project, or outdoor play. And whenever possible, spend some one-to-one time with each child so they feel valued and heard.

Making Your Home Neurodivergent Friendly

Creating a warm and relaxing space which is sensory friendly can help provide a calm environment for your child. You can consider adaptations to support all the senses:

Sight

- You could paint walls in colours that your child finds soothing. Often, colours such as reds, oranges, yellows, and whites are over-stimulating, whereas blues, greens, purples, browns, and blacks are soothing and comforting. Colours can affect mood and how we process information, function, and perform tasks.
- Avoid harsh or bright artificial lighting - you could consider fitting dimmable lights.
- Create a calm environment by removing excess clutter and mess.
- Consider creating zones in your child's bedroom to distinguish between play, work, sleep, and storage areas.

Touch

- Experiment with various textures and materials when choosing furniture and furnishings – softness should meet support. If fabrics get too hot or too cold then that could be uncomfortable.
- Keep bedrooms cool.
- Choose fabrics that appeal - these could be different for everyone. Many children like soft and snuggly materials. Consider patterns and prints too and go for ones that are fun but not overly stimulating.
- Remove labels from bedding and night clothes, or try bedding and nightclothes made from other materials.

Sound

- Provide a warning that a noise is going to happen. E.g., hoovering.
- Consider that some lights can buzz, which may distract your child. Ask your child if anything bothers them and believe them when they tell you to change the bulb or provide headphones - their hearing may be more sensitive than yours.
- Reduce noise using thick carpet, shutting doors fully, turning off appliances, and moving your child's bed away from a wall with activity happening on the other side.
- Noise-cancelling headphones/earbuds can help reduce noise. Some children may like background noise, so you might want to try using a fan or listening to music through headphones.

Smell

- Limit the use of fragrances your child doesn't like, fabric conditioner, candles etc.
- Reduce smells coming into the room by closing the door fully or by using scented oils that your child finds relaxing.
- Use an extractor fan or open a window in the kitchen to prevent cooking smells from filling up the house

Taste

- Try warm drinks like hot milk, hot chocolate, or herbal teas which some children find soothing.
- Some children crave strong, spicy or salty foods, others prefer bland flavours.

Personalised safe spaces

Creating personalised spaces within your home can make your child feel more comfortable and supported.

- Consider creating a cosy corner or comfortable chair; add soft blankets, adjustable lighting, or a bookshelf stocked with their favourite books.
- Some children may prefer an area designed for movement with a yoga mat, a rocking chair or even giant bean bags.
- You could customise the space with items with emotional meaning or linked to specific interests, like photographs, artwork, or collectables, to make your young person feel more secure.
- In this safe space, your child can feel relaxed and comfortable to stim and self-regulate.

Being outdoors

Whether or not you have a garden, there are many benefits to having a sensory garden or area and spending time in nature.

Sensory gardens have all kinds of benefits for neurodivergent children and young people and provide an opportunity to engage with nature on their terms, in their way, and at their own pace:

- Promotes play skills
- Helps with Sensory regulation
- Reduces stress
- Increases creativity
- Boosts Vitamin D from being outside
- Gardening can increase agility and co-ordination

Ideas to include:

- Butterfly garden.
- A water play area with water features like fountains, a rain wall, a pond, or sprinklers to run through.
- A scent zone with fragrant herbs and vines like honeysuckle and jasmine.
- An edible garden to explore taste.
- An area with bird feeders and plants that attract birds and wildlife.
- Music wall.
- Create window boxes or herb pots for balconies or window sills.
- Children might enjoy growing and eating their own fruit and vegetables - explore local allotments or park gardening groups.

Eating and Mealtimes

Thanks to Lucy Neary, 'The Early Years Dietitian' for writing this section and sharing her experience and expertise.

Having a child with feeding issues can feel isolating and parents often end up feeling judged for the way that their child eats.

There are many reasons for children to develop difficulties with eating a broad range of foods. Eating challenges are often seen in neurodivergent young people, but that this is not the only reason - there are likely to be other reasons your child eats in the way they do. Regardless of the reasons for your child's eating challenges there are many things you can do to help them to feel more confident and to reduce your stress levels.

Why do children become fussy eaters?

You may find that several reasons apply!

- **Medical issues:** previous illness, constipation, food allergies, reflux as a baby, chewing and swallowing issues.
- **Sensory preferences:** eating uses all of our senses so when a child is sensitive to certain senses or has processing difficulties this can lead to strong food likes or dislikes.
- **Anxiety:** some children have anxiety that just presents itself around food and others have more generalised anxiety.

- **Personality:** Our general characteristics and personality traits affect the way we eat AND the way we are fed. Needing a lot of routine and structure, being highly emotional, being cautious in new situations or around new people are all characteristics that affect eating. They also affect parenting; if your child is likely to have a highly emotional response to a new food or a change to routine you are less likely to introduce change for fear of the outcome.
- **Neophobia:** This is a normal developmental phase that many children go through at around 15-18 months where new foods are rejected. When children reach this age, they naturally become more mobile and inquisitive. Throughout our evolution we have developed a reflex to prevent us from eating foods that we don't recognise because they may have been unsafe. Now, it's just a very real inconvenience for many parents.
- **Oral motor skills:** if there are any issues with chewing or swallowing this will affect the types of foods your child will eat. If they prefer soft and easy to chew foods or always leave the skin if they eat a piece of fruit, these can be signs that some textures are hard for your child to eat.

"It's important to pick your battles. Food battles cannot be won. A lot of food issues appear to be about the child wanting to feel in control, and they quickly realise that no-one can make them swallow. The best thing to do is to pretend that you don't care if/what they eat, but it's so hard!"

Common feeding challenges:

- Not wanting to eat around other people or in public spaces such as the school canteen or restaurants.
- Eating only specific brands.
- Needing strict routines around food.
- Noticing and rejecting very tiny changes in food such as tiny specks of colour or blemishes.
- Eating a very limited range of foods.
- Having a preference for certain textures

Tips:

- 1 Even if your child only eats a small range of foods, it can really help to try to rotate them as much as possible to prevent your child getting bored and dropping any. For example; for a child that eats crackers yoghurt and cereal bars you can vary it like this:

- Day 1: 5 crackers + 1 yoghurt
- Day 2: 3 cereal bars + 2 yoghurts
- Day 3: 3 yoghurts + 1 cereal bar + 2 crackers
- Day 4: 3 cereal bars + 3 crackers

- 2 If your child responds well to visual stories to prepare them for activities this can work well with feeding too.

- 3 Have a meal plan so that they know what to expect at each meal and snack can help to minimise mealtime anxieties.

- 4 If your child is happy to be around other food and you have a dinner table you can offer food using family style dining. Put all food in the middle of the table and allow everyone to serve themselves, ensuring there are at least 1 or 2 things your child would usually eat (but it doesn't have to be their favourite every time!) This method has several benefits:

- It exposes your child to new foods in a non-pressurised way.

- Offering everyone's food together gives your child the message that all food is for everyone rather than a 'their food' and 'my food' mentality which can hold them back from exploring new foods.
- It gives your child a choice to pick the amount of food that they want to eat.

- 5 Even though your child might eat differently to other children this doesn't mean that it needs 'fixing'. As adults we all eat differently but we just accept that fact. Aiming to meet your child's nutritional needs is important but if they do that with a handful of foods then that's ok. A good multivitamin is your friend if your child will take one!

- 6 Working on fussy eating is not a one size fits all; some of the strategies that work for other children may not work for your child. For example, it is a great idea to get your child involved with food preparation to help them to interact with food without the pressure of eating. However, if your child is hypersensitive to touch or smell they may find this difficult, and it could actually put them off of trying foods. So always trust your judgement, you are the expert on your child!

- 7 Reduce any pressure for your child to eat certain foods as this will increase anxiety and mean they are less likely to eat. We know that anxiety decreases appetite so trying to keep worries to a minimum will help your child to have an appetite at mealtimes.

- 8 Think about your child's sensory preferences and think about anything that might make them feel more confident at mealtimes. For example:

- If they find noise difficult, let them wear ear defenders at mealtimes.
- If smells are difficult, put lids on, open a window or use a fan or give your child something sprayed with a scent they like to distract from any smells they find unpleasant.
- If touch is hard, ensure your child has a tissue or cloth to wipe their hands or face.

- 9 Screens are a hot topic amongst parents! There are 2 ways to think about screens: If a screen has been introduced to encourage your child to eat and removing it will not cause too much stress then starting to have meals without it will help your child to be more engaged with their food. It will also help them to listen to their body; for example, knowing when they are full. If your child needs the screen because they find the process of eating stressful and they need to be distracted to put food into their mouth we wouldn't recommend removing the screen. Pick your battles – and this potentially isn't one to conquer straight away!

- 10 Try to have a structure to your child's day to allow them enough time to get hungry in between meals and snacks. If your child is grazing all day, it can stop them having an appetite at mealtimes.

- 11 Try separating different types of food into separate bowls or using a plate with dividers as some children do not like different foods to touch.

Further information

- Children's dietitian online, Essex & London - The Early Years Dietitian (<https://theearlyyearsdietitian.co.uk>)
- Fussy eaters - NHS (www.nhs.uk/conditions/baby/weaning-and-feeding/fussy-eaters)
- Understanding children's eating and supporting change | NELFT NHS Foundation Trust (www.nelft.nhs.uk/understanding-childrens-eating-and-supporting-change)

Diet and Exercise

Eating well and staying active play an important role in wellbeing.

When these are out of balance, children may experience difficulties such as tiredness, low energy, or have trouble concentrating. In the longer term, diet and exercise habits can also affect overall health, including risks of conditions such as diabetes or digestive problems.

For a number of reasons, neurodivergent children are more likely to experience gastro-intestinal issues:

- Their brain might not correctly interpret messages from their gut about being hungry or thirsty.
- Your child may be so engrossed in what they are doing that they forget to eat or drink.
- Those with sensory issues relating to food may have a restricted diet.
- The symptoms of Irritable Bowel Syndrome (IBS) can be exacerbated during times of high anxiety.

These differences are not unusual, and some families find that small adjustments, like visual reminders to eat and drink, predictable routines, or exploring new foods gradually, help children feel more comfortable and supported.

Hints and Tips

- ✓ Exercising can help children to regulate their emotions, manage weight, improve self-esteem and better engage in the environment around them.
- ✓ It is not always easy to provide your child with the recommended mix of food types, vitamins and minerals; you can consider offering multivitamin supplements.
- ✓ It can be useful to keep a food diary to keep track of what is being eaten each day and noting if there is a change in behaviour or mood when certain food or drinks are consumed.
- ✓ Some parents report that a gluten free diet works for their child, whilst others have tried and say it makes no difference. Remember, everyone is different and what works for one, will not necessarily work for anyone else. In the first instance seek advice from your GP or Health visitor and discuss any concerns about potential allergies or food intolerances.

- ✓ Set regular times for food and drink breaks and remind your child to take a snack if they don't recognise the need themselves.
- ✓ If your child needs reminding to drink or eat at home, make sure you include this in any One Plan/SEND Support/ Individual Education Plan/Learning Passport or EHCP documentation, so that snack breaks can be incorporated into the school day.
- ✓ Let children explore the texture of food with their fingers so it isn't a surprise when they put food in their mouth.
- ✓ Ask your child to help prepare food. This can help them to feel more included in mealtimes and if they engage their other senses, for example smelling the raw ingredients, kneading dough etc. they may be more prepared to try what they have made. Helping can also equip them with other useful skills such as planning, safety etc. as well as helping to regulate senses.
- ✓ Exercise can be difficult for some neurodivergent children, particularly if they have dyspraxia and have poor co-ordination, or if they have had a bad experience such as being selected last for a team in PE at school. If they dislike team sports, try swimming, trampolining or even going for a family walk. Everyone has different preferences and all exercise is good!

Sleep

If your child is finding sleep tricky, it's a good idea to check in with your GP or another health professional.

Sleep problems can happen for lots of different reasons, and a professional can help rule out anything medical and point you towards safe and helpful support. Some reasons could be:

- Other conditions may be present; including anxiety, depression, and gastrointestinal disorders, and these can make getting a good night's sleep more difficult.
- Extra sensitivity to certain things, such as light or noise, which can make it hard to wind down and relax.
- Melatonin is a naturally occurring chemical in the body which helps you to relax and fall asleep. Neurodivergent people often have issues with melatonin production, which means that they have trouble falling asleep, staying asleep and waking early.

Sleep Routine

A good sleep routine includes all the little things you do each night to help you get a peaceful night's sleep. It could be anything from taking a hot shower, brushing your teeth, having quiet - tech free time, doing some gentle exercise such as yoga, or slipping into your favourite cosy pyjamas.

zzzzzz

"My son used to absolutely refuse to turn off his x-box before bed. Over time, I realised that it wasn't because he wouldn't turn it off when I asked, it was because he wouldn't leave in the middle of a game – he felt he was letting his team mates down. I have now built in a half an hour window to allow him to finish the game. This flexibility on my side has resulted in far fewer arguments between us!"

It is important that your child makes these habits a part of their nightly routine, to help their body know it's time to relax and unwind ready for bed.

Every child is different and it will probably be a case of trial and error before you get the routine right. For instance, if your child gets particularly upset by brushing their teeth, don't do this immediately before bedtime.

Bedtimes can become a very stressful time between parents and children, so sometimes it can be helpful to have some flexibility, especially if you or your child are particularly stressed or low on energy. On these days, having a strict and rigid routine could be unachievable, so skipping certain activities, like changing clothes or showering, can help to make getting to bed more manageable.

Hints and tips

Environment

The environment and surroundings can play a role. Not everything works for everyone, but it may help to:

- ✓ Make the bedroom more comfortable, tidy, and ordered.
- ✓ Block out light using dark curtains, black-out blinds or an eye mask.
- ✓ Make sure the bedroom is not too hot or too cold – your child may struggle to recognise or regulate their own temperature, so you could need to do this for them.
- ✓ Experiment with white/brown noise Lots of children benefit from a fan being on all year round to provide white noise, which blocks out other background noises and helps to slow down racing thoughts.
- ✓ You could try reducing noise using a thick carpet or rug, shutting doors entirely, turning off appliances, and moving your child's bed away from a wall if there is noise on the other side. You could also block out noises by letting your child use earplugs or listen to music through headphones.

- ✓ Remove labels from bedding and night clothes, or try bedding and nightclothes made from other materials.
- ✓ Reduce unwanted smells coming into the room by closing the door fully or by using scented oils or scents that your child finds relaxing.
- ✓ Remove distractions, such as electronic devices near the bed and pictures on the wall (unless the person finds these relaxing).
- ✓ Limit sugary foods, fizzy drinks, and other stimulants near bedtime.
- ✓ Melatonin naturally occurs in various foods including dairy products, bananas and cherry juice, so you could try introducing these foods in the evening.

You may find other strategies that work for you.

"A couple of things that helped us were –
1. allowing my son to sleep inside a duvet cover, wearing the corner bit like a hood and wrapped up like a cocoon, with a soft blanket over the top when it's cold.
2. I learnt how to do a head massage, like you get at the hairdressers and my eldest found this very relaxing at bedtime. I would also put pressure on his limbs, by pushing them gently into the bed, starting from his feet and working up to his shoulders."

Many sleep/relaxation apps are available:

- How to Help Kids Sleep Better – Headspace (www.headspace.com/sleep/better-sleep-kids)
- Moshi – Sleep and Mindfulness App Meet Moshi - Your New Superpower. (moshikids.com)

If these simple changes don't help, then there are other things you can consider:

- Purchase memory foam mattress toppers and pillows for comfort.
- Painting the walls a different colour, if there is a colour that helps your child. Soft blues and greens are often suggested as relaxing colours.
- Using a sensory projector. Some children can find them overly stimulating, but others like to follow the shapes, and it can help them to doze off to sleep.
- Weighted blankets or compression sheets work for some children, but be sure to check the retailer's guidelines and age limitations and get the correct weight for your child.
- Some children will benefit from medication to help them sleep, but it is really important to figure out if a lack of melatonin is what is causing your child's sleep troubles. Speak to your GP for more information if you think that medication may help.

Toileting

Establishing an independent toileting routine can be challenging for many children.

For neurodivergent children, this process may take longer and may involve additional barriers such as sensory sensitivities, communication differences, or difficulties with sequencing and executive functioning.

How this might affect your child.

For children who want to use the toilet in the same way as their peers, this can be embarrassing, so it is important to help them establish independence.

Some children don't have a natural desire for that independence, but it can make day-to-day living, particularly outside the home, difficult for them and you.

Hints and tips

It can be helpful to establish structure and a routine around going to the toilet and changing. The following ideas may also help:

- ✓ Use the bathroom to change your child so that they link toileting activities to the bathroom.
- ✓ Make sure that everyone helping your child adopts the same approach.
- ✓ Dress your child in clothes and pants that are easy for them to remove if they are in a hurry.
- ✓ See if you can work out a regular time that your child needs a wee or a poo (for example immediately after eating), and prompt them to visit the bathroom at these times. This develops a habit which may help even if your child still struggles to understand the physical signals of needing a wee or poo. Perhaps give your child a drink 20 minutes before a scheduled toilet visit to increase the chances of success!
- ✓ Boys may sometimes struggle to distinguish between when they need a wee or poo; if this is the case for your child, encourage them to sit down. You may also want to get them to sit down if they have poor co-ordination and struggle to aim into the toilet whilst standing!

Hints and tips

- ✓ Use visual aids in the bathroom to help your child understand what they need to do and in what order, for example, undress, sit on the toilet, wee/poo in the toilet, wipe (you may need to show how many squares of paper to take), get dressed, flush the toilet and finally wash and dry hands.
- ✓ Keep to the same routine and order every time you help them to go to the toilet.
- ✓ Make sure that they like going into your bathroom – they are unlikely to go independently if there are smells that they don't like (for example air freshener) or if they don't like the soap that you are asking them to use. Make the bathroom as child-friendly as possible – consider buying foaming soap or something that will be an incentive for them. If you have an extractor fan, consider if that sound is difficult for them – perhaps turn it off when they use the bathroom.
- ✓ It may or may not be appropriate to praise or reward your child – you know your child the best and will know how best to reinforce a successful trip to the bathroom.

Night-time toileting issues

If your child is dry during the day but has accidents at night then try the following:

- Have a set bedtime routine – go to bed at a similar time each evening.
- Limit the amount that your child eats and drinks leading up to bedtime.
- Try taking your child to the toilet when you go to bed or at different times during the night.
- Use mattress protectors to protect bedding.
- Many children need to wear a nappy (or night pants for older children) at night for a long time – it can be reassuring to know that there are other children in a similar situation but if you are worried, talk to your GP.

School toileting issues

Schools should not refuse to admit a child because there are difficulties with toileting- a school that does this may be at risk of disability discrimination.

Smearing

Some children smear their poo. This could be for medical, sensory or behavioural reasons including:

- feeling unwell or being in pain.
- being reluctant to wipe because toilet paper is too harsh.
- seeking out sensation from texture, smell or movement of arms during smearing action.
- seeking attention/wanting a reaction.
- fear of toilets.

If you have any concerns about sleep or toileting talk to your GP, your health visitor or school nurse.

Further information

- Bladder & Bowel UK - bladder and bowel problems information and advice www.bbuk.org.uk
- ECC Health and Wellbeing Services www.essex.gov.uk/health-and-wellbeing-services/continence-services
- On Autism and Toileting www.neuroclastic.com/on-autism-getting-dressed-and-toileting
- Constipation, Withholding, Overflow - Bowel Problems & Autism <https://autismawarenesscentre.com/constipation-withholding-and-overflow-a-deeper-dive-into-bowel-problems-for-individuals-with-asd/>

Hints and tips

- ✓ Visit the GP to make sure that there are no physical reasons involved, like being in pain.
- ✓ If you think it could be a sensory issue, provide an alternative substance with a similar texture, e.g., papier-mâché, Gelli Baff, gloop (corn flour and water), finger painting, play-dough.
- ✓ Replace toilet paper with a wet wipe.
- ✓ Teach them the wiping process, 'hand over hand' i.e., putting your hand on top of their hand as they wipe.
- ✓ Provide alternative activities at times when the smearing usually takes place.
- ✓ Avoid asking your child to clear up after themselves, or telling them off, as this may reinforce the behaviour. Try to avoid paying too much attention.

“my son used to get so engrossed in his special interests that he would forget to go to the toilet - I still have to remind him sometimes!”

Teeth Cleaning and Dental Health

Neurodivergent people often have additional sensitivity in their mouth and this can make everything teeth-related particularly challenging.

Teeth cleaning can be difficult - most of us can adjust the pressure while brushing our teeth to avoid hurting our gums, and learn to tolerate the taste of toothpaste, but this can be difficult for many Neurodivergent children.

Brushing my teeth

Toothpaste on

Brush teeth

Rinse

Floss teeth

Mouthwash or rinse

My teeth are clean!

✓ Hints and tips

- ✓ You could try a social story or a storybook which will help your child understand what happens while brushing their teeth. You can also show what can happen if you don't brush your teeth. There are some excellent free resources available online which could help:
 - I Can Brush My Teeth Social Situation (teacher made) (www.twinkl.co.uk/resource/t-s-3767-i-can-brush-my-teeth-social-stories)
 - I Can Brush My Teeth- Social Story - Autism Adventures (www.autismadventures.com/i-can-brush-my-teeth-social-story)
- ✓ It could be helpful to have visuals that show step-by-step instructions
- ✓ Experiment with different toothpastes to determine what flavour your child likes best. There are lots of different flavours available: apple, peach, strawberry, unflavoured etc. as well as the traditional mint.

"I hadn't realised that sensory toothbrushes are a thing – there are loads of different types available and I was surprised by just how much easier it made things."

✓ Hints and tips

- ✓ It could be easier to learn new habits with someone else. You could brush your teeth together and show your child what to do.
- ✓ You can introduce ways to make it fun – for example, asking your child to brush your teeth or using a musical timer.
- ✓ Allow your child to take a break if they find it too uncomfortable.
- ✓ Allow them to go at their own pace – don't rush them, but you can encourage them to slow down if needed!
- ✓ Encourage your child to do as much as they can themselves - even if they don't do a great job, you can go over it again afterwards.
- ✓ It can help to develop a routine and have a set number of brushstrokes for each tooth. This also gives a definite end point for children who find it hard and is a good distraction.
- ✓ Offer mouthwash after each brush - some children enjoy the sensation of using this.
- ✓ Consider using an electric toothbrush - these can give a better clean, and the vibration can also help to detract from any discomfort in their mouth. If bristles are too stiff, a baby toothbrush with softer bristles might help. If even this is too uncomfortable, using your finger is better than nothing!

Did you know?

Dental problems are almost entirely preventable if **sugary foods are minimised** and **teeth are cleaned regularly**.

A neurodivergent child **may not be able to communicate when suffering from toothache**. The pain may cause changes to eating, sleeping, behaviour and in some cases self-harm, such as biting.

"we use flavourless toothpaste – it's expensive but worth it."

"My child used to absolutely refuse to go to the dentist. I spoke to the dentist and he was actually really understanding and helpful. He said that the most important thing we could do was 'prevent, prevent, prevent' by minimising or even cutting out sugar, and that even if my child had days where he couldn't clean his teeth, cutting out sugar would minimise problems."

Visiting the dentist

Regular dental check-ups are essential to maintain dental health and hygiene. However, there are a number of factors which can make a trip to the dentist challenging, for example, cold metal instruments entering the mouth may be painful, and the noise of the drills and other instruments may be distressing, the taste and feel of mouthwash and dental paste can be uncomfortable and the dentist standing very close might feel like an invasion of their personal space.

There are things that you can do to make visits less stressful:

- Start from an early age.
- Speak to the dentist in advance to let them know about any particular difficulties.
- Take your own sunglasses and ear defenders or headphones.
- Help prepare for the visit by reading books about it, or showing them photographs of what to expect.

"We tried brushing our teeth together every night, in time to my son's favourite song, which turned it into a fun routine instead of a battle."

"I hold my daughter's hand and she squeezes it if she needs the dentist to stop. The dentist doesn't mind at all and it gives her a sense of being in control of the situation."

"My dentist always explains each step of the process clearly. For instance, they might say, "I am going to check your teeth to ensure they are in good condition", or "I will be using a small mirror to examine your teeth."

Losing teeth

The process of wobbling teeth can be extremely uncomfortable for some children. Explain to your child what is happening and why teeth are replaced to help them understand what is happening. You can also explain that it is a natural process and that the wobbling will end when the new tooth comes through.

Some children will view their teeth as part of their body and find it difficult to come to terms with the fact that a tooth has fallen out. They may want the tooth fairy to visit but not want part of their body to be taken away - so consider whether the tooth fairy could make an alternative arrangement in these cases, maybe they could leave the tooth but give a reward based on how clean the tooth is?

<https://autismlittlelearners.com/losing-tooth-story-for-children>

Keeping Clean

Challenges getting children to wash, shower and get in the bath vary at different ages.

We have talked in this section about creating the right environment in the bathroom and in the growing up section about puberty but there are other things you can try:

- For children that love different smells, let them choose their own products. Their idea of what smells or feels good may differ to yours.
- There are lots of toiletries that can help make washing more fun: squirty shower gel, bath bombs, bath slime etc., and these can help meet sensory needs.
- Have a range of toys that will help make bath time more fun.
- If you have a child that wants to spend a long time in the shower or bath, you could build your morning or evening routine around this to make sure everyone has enough hot water and everyone knows when their allocated slot will be!

✓ Showering Schedule

You could introduce using visual timetables to encourage completion of daily grooming routines.

Here's an example of a **showering schedule**:

- Wash my face, arms, feet and legs with soap
- Wash my body
- After the shower, dry my body with a towel
- Dry my face and hair with a towel
- Put deodorant under my arms
- Get dressed into clean clothes

You could watch this video with your child:

Personal Hygiene for Kids - Hygiene Habits - Showering, Hand Washing, Tooth Brushing, Face Washing
<https://www.youtube.com/watch?v=D5BtnvQqbWs>

Out and About

Planning can often help to make trips out easier and there are many things that you can do to limit uncertainty and address in advance the things that you know your child may find difficult.

Here are some of our top tips:

1 Research – try to anticipate the things that your child might find difficult, or that it might help to know about in advance. For example, if you are visiting a theme park or other attraction, can you get a map in advance and highlight the location of the toilets? If you are out and about in a city, can you plan stops to favourite restaurants, where you know the food will taste similar to what they have had before? Many chains have apps or information on their website that can help you to plan a visit. The Google Earth App is a great way to see places in advance and you can virtually walk/drive a journey.

2 Changing and accessible toilets. Consider purchasing a Radar key to access disabled toilet facilities. You can also apply through Shortbreaks for a Changing Places key which gives access to clean and accessible toilet and changing facilities across Essex.

- Disabled toilet key www.cheapdisabilityaids.co.uk/disabled-toilet-key-205-p.asp

- Apply for a Changing Places key <https://shortbreaks.essex.gov.uk>
- FREE Just Can't Wait Toilet Card - Bladder & Bowel Community (www.bladderandbowel.org/help-information/just-cant-wait-card)

3 Plan lots of breaks – in an unfamiliar environment and faced with the uncertainty of new things, your child will probably get tired quickly. Help by keeping them fed and watered and plan in lots of breaks. As above, if you know that having an ice cream or drinks break is a treat for your child, you can schedule in these stops to encourage them to rest.

4 Take some familiar items – take some things from home that might reassure your child. This could include a tablet, special toy, ear defenders, puzzle books etc. You can also take snacks and drinks that you know they will eat and drink.

5 Useful Apps – help alleviate stress with these recommended sensory Apps - Sensory Fidget Toy, Fluid, Heat Pad, SafeSpace.

6 Social Stories – can help to give an understanding of what will happen when and what is expected from your child during the visit. They are also a way to provide reassurance that you will go home at the end of the trip. Books available from Carol Gray and Siobhan Timmins.

7 Phoning ahead – it can help to phone ahead and speak to staff to get more information about the place that you are visiting and let them know of any additional things that they could do to help make your visit go smoothly. For example, if you are booking a table in a restaurant, you could ask for this to be in a quiet area.

8 Shopping – some children love shopping; other children hate it and can find it overwhelming. If your child does not enjoy shopping consider whether you need to go at all. This can mean changing your own habits, but online grocery shopping is now increasingly accessible and it is easier to buy shoes and clothes online too. If you do need to go into a shop, there are some things that may make it easier:

- Some supermarkets give free fruit to children to eat whilst they are in the store;
- You could give your child their own mini shopping trolley;
- Let them sit in the main part of the trolley and help to organise the food as you put it in;
- Ask for their help ticking off items from your shopping list as you put them in the trolley;
- Try using ear defenders, headphones and other distractions and avoid the areas with harsh smells such as the fish counter!
- If you do want to have shoes fitted, Clarks offer an appointment system and if you phone ahead, they can help to identify quiet times in the shop which can make your visit less stressful.

9 Condition alert cards – these are business cards which briefly outline your child's condition and can help to explain in difficult situations if you need to give information quickly. - for example, if you need to help your distressed child. Older children may also choose to keep one to use to ask for help without using words.

- I am autistic card (www.autism.org.uk)
- ADHD card - Stickman Communications (full range of needs are covered) www.stickmancommunications.co.uk/product/adhd-card/

10 Sunflower lanyards – these were designed to let people know that someone may need extra help. The scheme was originally for people with a non-obvious disability or condition, but throughout the pandemic some people started using the lanyard as form of exemption from wearing a face covering, which is now having an impact on those with hidden disabilities who use the lanyard. However, you may still find it useful and can order from a number of places including the hidden disabilities store. The Hidden Disabilities Sunflower (www.hiddendisabilitiesstore.com)

11 Car journeys – there are lots of special car seats and adaptations available to stop your child from wriggling out of their car seat. Always make sure you have the child locks on your doors to prevent your child from opening them while you are driving. Children's Car Seats & Safety Advice in the UK & Ireland - ICSC (www.incarsafetycentre.co.uk)

12 Flying – you can use a sunflower lanyard at most airports to help avoid the worst queues. Spotter books can help show what will happen at the airport and then give your child things to do whilst waiting. When you are on the plane you could have a lucky dip bag with lots of small treats; fidget toys; games, sweets etc. which they can pick one at a time to keep them amused on the flight. Look at the airport's website in advance, as many have extra information for children travelling who are SEND, including photos, maps and comic strips showing the different areas you have to go through.

Financial help

Having a child with additional needs can put a strain on the family finances, due to having to reduce working hours or pay extra for equipment or activities for your child, but there are a number of ways to secure help.

“Applying for DLA is a depressing experience, as you have to list out all your child’s difficulties, but the extra money each month has made up some of the money lost when I had to cut my working hours to make sure I am there after school to collect my son.”

Disability Living Allowance (DLA)

You can apply for DLA without a formal diagnosis as this is based on an assessment of needs. As well as receiving a DLA payment, this can also unlock other ways to save money or increase income. For instance, help with heating costs and increases to other benefits.

DLA is not means tested.

It’s not about whether your child is “disabled enough.” to qualify. DLA looks at how much extra support, time, or supervision your child needs compared to a neurotypical child of the same age.

If you’re spending more time, money, or energy helping your child cope day to day – maybe replacing lost school items, buying sensory aids, or paying privately for therapy that isn’t available on the NHS – that’s exactly the kind of additional need DLA is designed to recognise.

The DLA form is long and can seem daunting, but this guide from charity Cerebra is an excellent resource to help you: www.cerebra.org.uk/download/disability-living-allowance-dla-guide/

You can apply for a paper form to complete, or download a pdf form that you can edit and save and then print out and post: www.gov.uk/dla-disability-living-allowance-benefit

Personal Independence Payment (PIP)

When a child reaches the age of 16, DLA is replaced by PIP (Personal Independence Payment).

You can find more information here - www.gov.uk/pip and here www.citizensadvice.org.uk/benefits/sick-or-disabled-people-and-carers/pip

Carer’s Allowance

If you receive DLA at the middle or higher rate you can also claim Carer’s Allowance, but it is means tested. If you earn more than a set amount you cannot claim Carer’s Allowance, but you may be able to secure Carer’s Credit instead.

Carer’s Allowance Eligibility www.gov.uk/carers-allowance/eligibility

Top tip – Always get a benefits check before applying – to make sure you don’t lose out on other support.

Theme Parks/Theatre Trips/Days Out

Before arranging any days out, it is always worth checking the website of the place you will attend to see if they provide free adult carer tickets, or allow you to avoid queues if this is something that your child will be unable to do.

Local Libraries

There are lots of free events held at local libraries, throughout the year.

“We had some awful experiences at theme parks when queue times were just too long for my son to manage, especially when people were standing too close to him. Someone told me about the disability access scheme and it made all the difference, and we could just do everything at our own pace.”

Disabled Facilities Grant

A Disabled Facilities Grant can be applied for via your Local Authority to help towards the cost of making adaptations to your home. The adaptations must make it easier for you to care for your disabled child or increase their level of independence at home. More information on the criteria and how to apply can be found here: www.cerebra.org.uk/wp-content/uploads/2021/05/Disabled-Facilities-Grants-May21.pdf

Family Fund

Family Fund is a charity that provides grants to low-income families, with disabled or seriously ill children, to help pay for items such as sensory equipment, days out, holidays, technology etc: www.familyfund.org.uk/grants/apply-for-a-grant

“We used the DLA money to pay for counselling for my son, whilst he was on the waiting list for CAMHS.”

Foodbanks

There are a variety of organisations that run Food Banks - the following links will give you details of what they provide:-

- The Trussell Trust - www.trusselltrust.org
- The Salvation Army - www.salvationarmy.org.uk/budget-and-debt-advice
- Peabody Trust - www.peabody.org.uk/cs-services

You can also contact your local council to find out what is available in your area.

Save on the cost of food and cut down on waste

There are a variety of Apps available to help you find cheap food and reduce food waste, such as Too Good To Go, where restaurants, cafes and bakeries list leftover food that would otherwise be thrown away. Users can then browse the map for food near them and pick up a 'magic bag' for a fraction of the original retail cost. Registration to the app is free and users can specify their dietary requirements.

Essex Essential Living Fund

Anyone living in Essex can apply for the Essex Essential Living Fund. You will need to answer questions about your income, earnings and savings. You also need to give proof of your financial situation.

The Essential Living Fund can help pay for: furniture, household furnishings, white goods, clothing and footwear, including school uniforms in exceptional circumstances, general living expenses such as groceries, nappies, toiletries and money for pay-as-you-go fuel meters

- If you live in Essex or Southend you apply via the Southend Council site - www.southend.gov.uk/extra-financial-help/essential-living-fund
- For Thurrock - www.thurrock.gov.uk/essential-living-fund/about-essential-living-fund

Baby Basics

Provide some of the basics needed for vulnerable women with a newborn baby. They provide starter packs for those in need, including Moses baskets, baby clothes, nappies, etc. They do not accept self-referrals, but you can contact, your mid-wife, health visitor or social worker to refer you.

- www.baby-basics.org.uk/

Short Breaks

The Short Breaks service gives disabled children and young people a chance to take part in fun, safe activities while giving parents and carers some time to rest, work, or spend with other family members.

Local services

- www.southend.gov.uk/children-disabilities/short-breaks-disabled-children-young-people
- www.livewellsouthend.com/shortbreaks
- www.thurrock.gov.uk/sites/default/files/assets/documents/short-breaks-duty-statement-2018-v03.pdf
- <https://shortbreaks.essex.gov.uk/>

Essex Activate

Essex Activate provide holiday clubs for families on low incomes. There are some SEND specific groups. Children can enjoy a range of activities and are also provided with a meal at each session. Check out their website for details of the sessions available in your area.

- www.activeessex.org/children-young-people/essex-activate/

CEA Card

The CEA Card enables you to a free adult carer cinema ticket, whenever you purchase a ticket for your child. It is accepted at most cinema chains: www.ceacard.co.uk

Access Card

This card provides evidence of your child's disabilities and can help you to secure discounts at many theme parks and attractions. www.accesscard.online

Disability Aids etc.

Better Mobility have listed a variety of charities that you can apply to for help with disability aids, therapy, sensory equipment, etc.

Charity Funding Options - Better Mobility - Wheelchairs, Powerchairs, Scooters and Living Aids: www.bettermobility.co.uk/charity-funding-options.php

Discounts For Carers

This is an on-line shopping discount scheme for carers. You can secure discounts by clicking through to retailers via their website: www.discountsforcarers.com

The Cauldwell Trust

The Trust provides equipment, treatment and therapies for sick and disabled children. Apply for Support - www.caudwellchildren.com/apply-support/

The Handicapped Children's Action Group

This organisation provides specialist equipment for children with disabilities, learning difficulties and other special needs: www.hcag.org.uk

Brainwave Charity

<https://brainwave.org.uk/>

Looking after yourself

Most parents and carers find it hard to make time for themselves, but to be able to support everyone else in the family, you need to keep well.

This can be especially hard if you are juggling the support you need to give your child alongside numerous appointments, work and other family commitments.

Often, we make time for everyone else at the expense of doing things that we enjoy, or which can help us to manage our own stress to keep healthy. We feel guilty taking time for ourselves when there are so many other pressures – and often that can take the joy from activities, even if we manage to do them!

"It used to really annoy me when family members would say that I needed to take time for myself – how? But actually, I realised that if I got up 15 minutes earlier and had that quiet time to start the day, then I was in a much better position to cope with whatever happened next."

"I have recently started to homeschool my 2 children. My husband recognises how challenging this is for me and how important it is that I can 'fill my cup'. Unfortunately it isn't always possible to go out together as a family or to do things as a couple as we have limited childcare options – but he looks after the children to give me time to do whatever I need to do to recharge. It isn't always the same thing, sometimes it is sitting in a coffee shop with a book, sometimes it is seeing friends, sometimes it is talking to other parents who understand, and sometimes it is doing something challenging so that I can keep my own sense of identity. It's no one thing but it is so important for me to have that opportunity to fill my cup."

Things you can do:

Reduce the pressure on yourself

If you don't want to do something, give yourself permission to say no. Or if you are tired and need to duck out of plans then that is ok. Friends will understand.

Say YES to offers of help - it is not a sign of weakness.

Social media

Social media can be full of false pictures of domestic harmony - and this can be difficult to keep seeing if you are going through a difficult time yourself. Equally, sometimes the feed can seem overwhelmingly sad and difficult. It is ok to take a break – or to switch off altogether. If you explain to friends that you are doing it then they will find another way to contact you if needed.

Speak to Your GP

Tell your GP that you are a carer - they should amend your records to reflect this. Speak to them for help to keep you healthy and well.

www.essexcarerssupport.org.uk/tellyourgp

Friends

Spend time with the friends who make you happy; that you feel comfortable around with your child and with whom you can be yourself.

Be present

It's a technique that you need to learn, but if you can focus on the current moment, then it can help you to manage anxiety about the future. There are lots of great resources available – many of which are free. **Headspace How to Be More Present** (www.headspace.com/articles/how-to-be-more-present) is a subscription service but does include some useful sessions which are free.

"I volunteered to take the rubbish to the skip. The queue was huge and I sat for 30 minutes – but it was so calm and I really enjoyed just listening to music on the radio by myself with the sun on my face!"

Further Support

There are a number of charities who provide support specifically for unpaid carers. They organise events and can provide respite care.

- Action for Family Carers | Supporting Carers Across Essex (<https://affc.org.uk/>)
- Carers First Site Essex (<https://www.carersfirst.org.uk/>)

“I find that I feel guilty a lot of the time – whatever I do I can only think about the other things that aren’t getting done. I know this isn’t healthy and I am starting to notice when I do it and try to be kind to myself and take a minute to acknowledge that I’m doing my best.”

Section 7

Communication, Speech and Language

Difficulties with Communication, Speech and Language

Thanks to Michelle O'Brien, Speech and Language Therapist and Lois Beecham, Specialist Speech and Language Therapist for providing input and advice on this section.

What do we mean by speech, language and communication?

Speech

- Speech sounds, saying sounds accurately and in the right place
- Speaking fluently
- Speaking with expression, for example, pitch, volume

Language

- Talking and understanding
- Having words to describe objects and actions
- Using words to build sentences
- Following grammar rules so things make sense

Understanding

- Processing and making sense of what people say
- Understanding the words being spoken
- Understanding the rules of grammar

Many neurodivergent children have difficulties with speech, language or communicating including:

- being minimally or non-speaking
- mild, moderate or severe learning difficulties
- language delay
- specific difficulties in producing sounds
- a hearing impairment
- stammering
- voice disorders
- situational/selective mutism
- misunderstanding and taking things literally

Types of Communication

Expressive: How your child communicates outwards (words, gestures, signs, symbols).

Receptive: How your child understands language coming in. A child might understand far more than they can express.

Pragmatic: Social use of language — turn-taking, eye contact, tone of voice, knowing how to start or end conversations.

What professional help is available?

If your child has any of these difficulties, their school, paediatrician, GP, or health visitor will usually make a referral for your child to see a Speech and Language Therapist (SALT). The SALTs work together with children and their families, and other professionals to carry out assessments and plan a personalised therapy programme plan to meet child's communication and swallowing needs.

New services are being rolled out with effect from September 2025 on a phased basis, giving an increased availability of linked therapist support within schools, without the need for a referral.

If you are looking for a private SLT: Check the Register and find a registered health and care professional www.hcpc-uk.org/check-the-register

Local Speech and Language services

- www.essexice.co.uk - ICE has a large range of Assistive and Augmentative Communication (AAC) aids that you can borrow for free
- Basildon, Brentwood, Billericay, Wickford or Thurrock - www.nelft.nhs.uk/services-essex-salt-referral
- Mid-Essex (via Provide) - <https://providechildrenandfamilyservices.co.uk/services/childrens-speech-language-therapy/>

Hints and tips

- ✓ **Role play** can be a great way to show your child appropriate frameworks for social interaction and to explore how things can go wrong/what to avoid.
- ✓ Try to **say less** by making your questions short and specific. Speak slowly and repeat your instructions.
- ✓ Give your child **time** to process the information that you have given them and time to respond– wait, wait and wait for a response!
- ✓ Find opportunities to **encourage** your child to communicate, for example, by providing small food portions or treats and encouraging them to ask for more; or offer them choices.
- ✓ **Joint attention** – follow your child’s lead and use their interests to spark conversation; encourage them to copy your actions and sounds; help them to participate in stories and songs, join in with your child’s play; take photos and videos of you with your child and watch them back together, and ask family members and friends to provide photos that you can use to talk about them with your child.
- ✓ **Share** lots of picture books with your child and point to the pictures as you say the corresponding words.
- ✓ **Allow your child to take the lead** when you play, observe, wait, watch and allow them time to develop thinking and language
- ✓ **Set aside a time** when there will be no distractions
- ✓ Interactions don’t have to be long, **little and often** works well

- ✓ Use Alternative and Augmentative Communication which are systems and devices that aid communication for people, supporting understanding and communication. Speech and Language therapists will provide advice of any AAC suitable for your child. AAC does not have to mean high tech computer technology, it includes signing, gestures, written words, symbols and picture books.
- ✓ **Visual aids** – can be really helpful to help a child communicate without the need for words.
- ✓ **Makaton** is a unique language programme that uses symbols, signs and speech to enable people to communicate. Makaton can be really fun too; the resource page has lots of nursery rhymes you can share and learn. www.makaton.org
- ✓ **Picture Exchange Communication System (PECS)** aims to teach functional communication. www.pecs-unitedkingdom.com
- ✓ Children who find it hard to communicate their feelings may find these **Communication Fans** a simple way for them to express how they are feeling. The fans contain 10 pictures and words with symbols for sensory situations such as ‘it’s too crowded, noisy, or smelly etc’.
- ✓ **BSL (British Sign Language)** is a way to communicate using gestures, facial expression and body language. www.british-sign.co.uk

- ✓ **Sensorimotor and/or People Play.** Some children may not yet be ready to play with toys. Reducing the focus on speech and supporting your child’s sensory preferences, can create situations that make it easier for them to interact. For example, try hide and seek, jumping on a trampoline, crawling through a tunnel, “row, row, row your boat”, swinging in a blanket, messy or water play etc.
- ✓ **All play is okay!** It’s important to accept and connect with all types of play. Your child may not speak but play is their way of communicating, processing and sharing their world with you. This could include lining up toys, repeating scenes, focusing on textures, sorting by colour, watching how light reflects off objects etc.
- ✓ **Tune into echolalia** - your child’s use of repeating words or phrases (e.g. repeating a line from a favourite show or song) often carries meaning, so pause, listen, and respond with acceptance, recognising it as a valid and meaningful way to communicate.
- ✓ **Reduce your use of questions and share your thoughts, ideas and experiences.** Make observations, share information, draw attention to things, narrate what’s happening, comment on the environment etc. This will invite your child to engage and respond but reduces the level of demand and anxiety around communicating. For example, instead of saying ‘what is that bird doing?’ say ‘look how high that bird is flying’.
- ✓ **Literal Language** - you can help avoid misunderstanding by using factual, specific language.

“From as early as one and a half I was worried about my daughter’s speech as she had lost words, and was making beat box noises instead. When she was about 18 months old, I phoned my health visitor who gave me the times and days of our local speech therapy clinic drop in. At the clinic, they asked me if I knew what autism is and I went home and googled it and she had every single sign and I knew she had autism. From there it snowballed, assessment after assessment and she was diagnosed just a few months after her 2nd birthday.”

- www.communicationmatters.org.uk
- www.specialneedsjungle.com/speech-therapy-terminology-what-does-that-mean

“We felt helpless that our son wasn’t communicating, especially when he seemed sad and we couldn’t work out why. Knowing what to do to get real help would have given us some focus and reduced stress for the whole family.”

“Everyone assumed she was choosing not to talk, not that she couldn’t talk - no one appreciated her difficulties in speaking. Everyone said that she would talk when she had settled in, but I don’t think she ever ‘settled in’ anywhere. Friends tell me they thought she was just being rude when she couldn’t speak to them. She wouldn’t even be able to talk to me, if someone else was around. But when we were on our own, she couldn’t stop talking - tripping over her words as they tumbled out of her.

She desperately wanted friends, but not being able to talk to them, she couldn’t join in and quickly got left out of social groups.

Selective mutism is such a debilitating condition, that is so poorly understood. There is some argument for it to be called Situational Mutism, as the word selective implies choice. Also, in my experience, my child can speak freely to me on my own, but the introduction of another person can cause such anxiety, they can’t even manage to look at me.”

Section 8

Sensory Needs

Sensory Processing and Integration

Researching your child's sensory needs can help you understand how they experience the world. This section has been written by Jenne Seibolt, a Children's Occupational Therapist from The Great Little OT Practice.

What is Sensory Processing?

Sensory processing is the brain's ability to process, interpret and filter sensory input received from the senses to organise and prioritise our responses to the constant environmental demands appropriately.

Some people refer to sensory processing difficulties as 'Sensory Processing Disorder' and many neurodivergent people experience this, not just autistics.

Currently, there is no separate diagnosis for sensory processing difficulties as such, which is conversely what the word 'disorder' implies.

There are five well-known senses - sight, hearing, touch, taste and smell, which the conscious part of the brain is very aware of; it continuously checks information obtained by these senses in order to experience our environment. There are other, equally important sensory systems, essential for normal body functioning; however, these are not so easily recognised because the nervous system keeps the input unconscious: proprioception is the sense of the position of body parts in space, the vestibular sense is the balance system that provides information about our movement and orientation in space and interoception is the messages sent from the body to the brain that regulate temperature, hunger, pain and many other functions of the body.

There are two important factors to remember when it comes to sensory processing:

- 1 Firstly, all autistic children and some neurodivergent children are likely to experience some differences in sensory processing, but they don't always lead to major difficulties. But it's good to become a detective for your child and identify their sensory needs so they can be considered when there is a practical problem, such as accessing a toilet (smell, sound), wearing certain clothes (touch) and accessing busy places from assemblies to supermarkets (sound, touch and sight). It is useful, as a parent, to understand the issues and principles behind sensory processing to support the child in a) minimising unhelpful sensory input, and b) providing the sensory input they need to function best.
- 2 Secondly, our sensory processing skills impact greatly on our ability to regulate reactions and, to an extent, our ability to regulate our emotions. Movement breaks help everyone regulate their focus and energy. Research shows that physical activity has a strong connection to emotional well-being. Children with sensory processing differences require more input to the vestibular and proprioceptive systems to help them with regulation – this is not a quick, one-off fix to a problem, but an ongoing, long-term need.

How this might affect your child

Everyone is different in how they process sensory information. It doesn't always lead to problems, but most autistic people have differences in sensory processing. This means that they may be over- or under-responsive (over- or under-sensitive) to input received from the sensory receptors. The child can be over-responsive in one or more of their senses and be under-responsive in one or more of the others at the same time. It is also worth noting that responsiveness is not consistent and is affected by many factors, such as physical well-being and the social environment – we are all more bothered by loud noises if we are ill, and most people will feel less bothered by sensory input if they are in their familiar home environment as opposed to, say, a shopping centre.

“When I wear those other itchy trousers, it's just too distracting for me to do my work.”

In your child, the over- or under-responsiveness may show, as follows:

Touch

The child may struggle with wearing clothes, especially with labels and seams, and especially in tickly places, such as feet. They may struggle (or used to when they were younger) with nail cutting, hair washing and hair cutting. They may dislike being touched lightly or become disproportionately upset when someone brushes past them. Small injuries to the skin may either seem the end of the world or go unnoticed. The responses may be intense; the input is registered as irritating at best, and as painful at worst.

✓ Top Tip

If the child is over-responsive/sensitive to touch input, ensure you cut out labels from clothing and try wearing socks inside out. There are specialist suppliers for seamless clothes, if necessary. Some children prefer tight fitting clothes, such as leggings, which tickle less on the skin when they move, others will prefer loose fitting clothes – you will have to experiment. One way to help a child with under/over sensitivity to touch is to warn them if you are about to touch them and always approach them from the front. If nail cutting is an issue, do it while the child is fast asleep. Many children don't like having their hair cut, since the small hairs find their way into the clothing and tickle and itch – you can try to make the hair wet before cutting so it clumps together. Alternatively, if you are cutting it, you can do it with the child sitting in the bath. It can be useful to slowly introduce different textures to touch and, if children enjoy certain touch experiences too much, you can offer suitable alternatives to smearing, such as playdough.

Sound

To the child, some noises are magnified and some are not heard; they are likely to find it difficult to prioritise one noise over the other, e.g. the teacher's voice over the general noise of the classroom. Sudden loud or unusual noises may trigger tears and/or a 'fight or flight' response. Background noises may be really distracting.

✓ Top Tip

If the child is over-responsive/sensitive to sound input, you could pre-warn your child before going to noisy places. Some like to use ear defenders/head phones/ear plugs to block out some of the noise. Try to avoid peak times, if possible.

Sight

The child may be over-responsive to bright lights. They may be able to spot small difference others easily miss. Some objects may be magnified, some blurred. Children may enjoy looking at specific objects more than you would usually expect.

Top Tip

If the child is over-responsive to visual input, you could make changes to the environment, such as reducing fluorescent lighting, providing sunglasses and peaked caps, or using blackout curtains. At school, it may help to minimise colourful displays and to create a workstation in the classroom to minimise visual distractions.

Most children benefit from visual support in their schedule, since they tend to find it easier to process visual information over verbal instructions; this is related to communication issues rather than sensory processing.

“My daughter loves her room clean and tidy and having her projector light on when she goes to sleep.”

Smell

Although this is relatively rare, the child may find certain smells unbearable (e.g., cooking smells, strong perfume or a trip to the zoo), some may actually gag. Others may not notice bad smells at all.

“My child can not stand the smell of fish, but loves the smell of the beach”

Top Tip

If the child's sense of smell is under-responsive/sensitive, you could help by creating a routine around regular washing and using strong-smelling products to distract your child from inappropriate strong-smelling stimuli. If they are over-responsive/sensitive to smell, you could use unscented detergents or shampoos, avoid wearing perfume, and making the environment as fragrance free as possible.

Taste

The child may seek or avoid hot, spicy, cold, bland, mushy or crunchy foods. The child may try to eat non-food items, although this may relate to non-sensory aspects. Please note that most food issues in children relate to the texture of the food, rather than its taste and, therefore, relate to the sense of touch: how the mixed textures feel inside the mouth.

Eating non-food items is referred to as Pica.

“My son hates sticky food but loves crunchy cereal”

Top Tip

Some children may limit themselves to bland foods or crave very strong-tasting food. As long as someone has enough dietary variety, this isn't necessarily a problem – if they are growing, they are probably doing okay. Unlike adults, who need a fairly even amount of calories each and every day, children are able to spread their calorie intake over 4-8 days (yes, days, it's really true!). This is perfectly normal. Also, remember that eating issues may relate to the food texture rather than the taste, and therefore to the sense of touch.

The child may struggle with the sensory input of two or more food textures in the mouth at the same time – which is why many children prefer to keep the components of their dinner separate, i.e. sausage on one plate, chips on another, with the beans in a separate bowl – make it happen if you can. You can get plates with separate sections, if you prefer.

Many children like to have a bit of control over their food, try and get them involved 'hands on' as early as you can and as they can tolerate. A great way to expand the food range is to eat 'old fashioned family-style', with bowls of food in the middle of the table and everyone helping themselves, with no pressure to eat anything. Children are given control and see that the food is safe to eat, since you are eating it, too.

Vestibular (balance)

The child may rock back and forth, in standing or sitting. They may enjoy spinning, jumping, enjoy being upside down, or literally, climb the walls. On the flip side, they may avoid any activities that involve rapid change of position, such as playground swings and roundabouts, and become travel sick quickly.

“My twins are so different. One like seesaws while the other feels sick. One always falls over and can’t ride a bike while the other is really good at football!”

“My child loves climbing so we take him to Bouldering Club every week. His posture has really improved along with strengthening his joints.”

✓ Top Tip

These two senses, vestibular and proprioception, are less well known and operate in the background; nonetheless, providing the right type of input to these sensory systems – and avoiding the wrong type – can have a big impact on the child. All children require movement breaks to release energy and to re-focus their concentration. Children with sensory processing differences often need this with higher frequency, duration and intensity than others; often, they are under-responsive in these senses.

- They may be un-coordinated and feel ‘spaced out’ since they can’t tell where their body is within their environment. Lots of movement activities, such as bouncing on a trampoline, running, using playground equipment, etc. will feed into these sensory systems. Remember that all physical activities need the appropriate adult supervision to keep your child safe.
- If your child is overstimulated, avoid spinning movements, but you can try short, linear movements, such as rocking, which may calm them. Swings can provide regulating sensory input; you can do this with two adults and a blanket at home.
- Many children like being squashed and squeezed with tight hugs or rubbed in a towel after a bath. This will provide them with lots of pressure to the muscles, making them more aware by providing sensory movement input.

✓ Top Tip

- Some children use chewing on clothes and pencils etc. as a strategy. Biting uses the jaw muscle, which provides lots of proprioceptive feedback, which is calming: you may have experienced it yourself, when you clench your teeth in a stressful situation to help you cope. You can offer your child crunchy foods such as carrot sticks, apples and bread sticks instead, or find chewable pencil toppers and bracelets made from food-grade silicone as a safe replacement. Pica is a more extreme sensory behaviour, whereby children eat non-food items. A top tip for dealing with Pica is to make up a snack box with lots of different foods that match, in texture, the non-food that the child was eating e.g. hair is replaced with alfalfa, sand with crushed up biscuits, twigs with twiglets. Every time the child eats non-food stuff the parent / school can offer the alternative to provide the same, or similar, texture experience.

Interoception isn’t as well understood as other sensory processing issues. Experts are still learning what techniques can help children who struggle with it. There is evidence that mindfulness activities can help children become more aware of interoceptive sensations in their bodies. Encourage the child to ‘tune in’ and listen to their body sensations. Heavy work and a sensory diet may be helpful as well.

“My daughter is always hungry. It is like she can’t understand when she is full.”

Proprioception (awareness of our own body in space)

The child may seek movement all the time. They may love tight hugs and to squeeze into tight corners behind sofas and beds. They may like heavy weighted things or people on top of them. Reduced registration from proprioceptive input is also associated with motor co-ordination difficulties: the child may appear clumsy and have a poor sense of personal space. They may struggle with fine motor skills such as using a pen or tying shoelaces.

Interoception

Interoception is a term used for all the internal messages from our body to tell our brain what is going on inside our body, when we are hungry or feel full, when we need to use the toilet, when our heart is beating fast or when we have that sensation of butterflies in the stomach. Just as there are receptors in your muscles and joints, there are also receptors inside your organs, including your skin. These receptors send information about the inside of your body to your brain.

This helps regulate our vital functions like body temperature, hunger, thirst, digestion, and heart rate. For children with sensory processing issues, the brain may have trouble making sense of that information. They may not be able to tell when they’re feeling pain or when their bladder is full. An itch may feel like pain, or pain may feel ticklish.

Children who struggle with the interoceptive sense can also have trouble registering a change in their emotions – these changes usually start with internal physical changes, too: e.g. we may become hot when we are angry or embarrassed. Children may not be able to notice these signals or may not be able to match them to the emotion. Therefore, it’s harder to clearly identify the emotions and they seem to flick quickly between them

What professional help is available?

There are no quick fixes or cures for sensory processing difficulties. However, Occupational Therapists (OTs) have developed an understanding and expertise around sensory processing skills, which can be helpful to access.

Children's Occupational Therapists enable children and young people with special needs to participate in and successfully manage the activities that they want or need to do at home, at school or work and during their free time. They have the skills and expertise to identify the personal, task and environmental factors that support or inhibit children's development, participation and achievement.

OTs tend to address sensory processing issues alongside motor skills as part of a child-centred, goal-focused approach to develop the child's level of independence with day-to-day activities such as dressing, eating, toileting at home and learning activities at school.

OTs recognise that a child needs to be in the right state of alertness to be able to function and learn – mostly a 'calm and alert' state – and OTs can provide strategies to help children to increasingly achieve the right state for each situation they encounter.

Most OTs use an educational approach, providing the children, parents and school staff with the understanding of the underlying principles of sensory processing and providing lots of sensory strategies to be incorporated into the child's daily life.

Some OTs use sensory-based intervention, some use a specific approach called Ayres Sensory Integration (ASI), which requires additional qualifications, both these approaches are usually used as part of a goal-focused and occupation-centred approach

Many OTs offer parent workshops, with useful information about the principles of sensory processing. This approach helps educate parents about sensory needs and recognises that everyday interventions by parents can have the biggest impact.

If you prefer to find a private OT, which means you will have to pay for this yourself, you can find a directory on the website of the Royal College of Occupational Therapists for information on therapist working in your area: www.rcotss-ip.org.uk/find

What is a Sensory Diet?

This is a term used for a schedule or programme of activities to help a person to manage the demands from their sensory environment, which they may find overwhelming. The activities are usually devised to provide intense input to the proprioceptive and/or vestibular system, which are known to have a modulating (or regulating) effect. The underlying purpose is to meet the person's sensory processing needs, and, over time, improve their sensory processing skills. It is intended to be used 'little and often', i.e. in short five-minute bursts several times during the school day, as well as at home. These are sometimes referred to as Sensory Breaks.

Sensory Diets are often recommended by Occupational Therapists, as a strategy towards the child accessing learning activities – they are a tool, a means to an end, not an end in themselves. However, if a child uses a sensory diet schedule, it must be followed and not withheld; **it must never be used as a reward or consequence.**

Most children, especially young children, benefit from the type of activities included in the Sensory Diet to improve attention and concentration.

Hints and tips

Many neurodivergent children and young people have difficulty processing sensory information. Any of the senses may be over- or under-responsive/sensitive, or both, at different times. These sensory differences can affect behaviour, and can have a profound effect on a person's life.

Small changes and adaptations can be made to limit the impact of sensory processing difficulties:

General:

- ✓ Make sure that all people working with and looking after your child are aware of their issues and don't misinterpret them. There is a wealth of information on sensory processing difficulties available on the internet, with many statutory and independent providers offering online training on sensory processing for free or for a small fee, accessible to parents, grandparents and school staff alike – knowledge is power and nurtures understanding of the child's world.
- ✓ When a child is displaying a sensory-based behaviour, it usually meets a need for the child: it helps them to regulate and cope in the time and place they find themselves in. It usually doesn't work to simply suppress these behaviours – they will show in other ways. If a behaviour is unsafe or undesirable/inappropriate, try and work out what sensory need is being met by it, and find a suitable replacement; however, this is sometimes easier said than done. Use the support systems around you to ask for advice. This display of sensory behaviour is often called **Stimming (Self Stimulatory Behaviour)** or stereotypes.

Sensory Overload

Sensory overload is a term used to describe a point where the sum of all the sensory input a child/person experiences becomes too much for them to process.

The best way to avoid sensory overload is to detect early signs of it building up, such as irritability, restlessness and discomfort, and to remove/minimise the sensory input.

The National Autistic Society has made a short video to illustrate what it may feel like for a child: www.youtube.com/watch?v=aPknwW8mPAM

Section 9

Understanding and Supporting your Child's Social and Emotional Development

Supporting Emotional and Social Needs

Neurodivergent children often experience the world more intensely. They may struggle with recognising, expressing, or managing their emotions, and social situations can feel confusing or overwhelming. This can look like meltdowns, withdrawal, anxiety before activities, or difficulties making friends.

Parents play a vital role here. How you respond to your child's emotions – listening, validating their feelings, and helping them find safe ways to calm – directly shapes their sense of security and self-worth. Supporting their social needs might mean preparing them for new situations, practising social scripts, or gently helping them navigate friendships.

Without this kind of support, many children internalise criticism or rejection, which can lead to low self-esteem, anxiety, or even depression. With the right support, however, your child can feel understood, included, and more confident in themselves.

Neurodivergent children are often less emotionally mature than their peers, which can make it harder for them to cope with strong feelings or social expectations. This doesn't mean they won't get there – most children tend to catch up with emotional maturity by their early 20s, especially when they are given understanding, patience, and the right support along the way.

It's important to be flexible with your strategies and adapt to your child's needs as they grow. What counts is that your child feels included, loved and has a safe-haven at home. You don't have to be an expert to help your child succeed - simple strategies can make all the difference.

“My daughter was really good at gymnastics but she got so nervous before going, complaining of headaches and tummy aches, even though she loved it when she was there. The anxiety started to really impact on our lives. We discussed it with our paediatrician who suggested that we encourage her to stop or take a break. It was sad to stop doing something that she enjoyed, but it immediately lifted a huge weight, and she was more able to cope with school and other daily pressures.”

In this chapter, we have overviewed some of the challenges you will face, some helpful strategies and models of support, under the following headings:

- **General Tips**
- **Recognising and Regulating Emotions**
- **Anxiety**
- **Meltdowns and Distressed Behaviour**
- **Organisational Skills**
- **Social and Communication Differences**

General tips

- ✓ **See the funny side** – this isn't always possible, but there may be times that you can use humour to help diffuse a difficult situation. This can help to create a good, fun relationship between you. However, there may be occasions that this doesn't work, so be responsive to your child's mood.
- ✓ **Ask yourself** – Is this a can't or a won't situation? For example, is your child refusing to use cutlery just to be defiant, or is it because they struggle with fine motor skills and can't do it? Has your child deliberately forgotten their PE kit, or do they lack the executive functioning skills to remember it?
- ✓ **Don't say, "Because I told you so!"** - explain why. A lot of neurodivergent children and young people struggle with following nonsensical rules and demands which don't make sense to them - they need to understand the reasoning behind it.
- ✓ **Spend quality time together** – this is especially important in the teenage years to keep a positive connection between you. Try to do something every week and make it a moan-free event! This doesn't need to be a formal event, just something that you can both do together, e.g. go for a walk, drive around the area playing your favourite music, watch a TV programme together, take them out for ice cream – whatever encourages them to feel closer to you. Try to avoid mentioning anything they've done wrong that day/week during these times. Be their safe person – let them know they can tell you anything, and you won't shout or criticise, and you will help them solve the problem.
- ✓ **Communicate clearly and briefly.** If you attempt to communicate too much information at one time, your child can quickly become overloaded (in fact, anyone can become overloaded!). Try to give one or two options rather than a long list, and minimise the number of instructions you want them to follow.
- ✓ **Take a break** - If your child becomes angry or overwhelmed, it's often best to delay the discussion until everyone has calmed down.
- ✓ **Pick your battles** – sometimes, it can feel like you disagree about everything. If there are arguments about things that don't matter, sometimes it is helpful to let those go.
- ✓ **Provide positive directions** – if you tell your child what to do rather than what not to do, this gives them a start rather than a stop direction, and can make it easier for them to follow.
- ✓ **Believe your child** when they say that something is too loud, too smelly, too bright – see sensory section
- ✓ **Give your child permission to do less or say no** - You may feel that your child needs to socialise more with other children at after school clubs or playdates, but bear in mind that if your child has been at school all day long with lots of other people, for many of them that is enough socialising for one day. You have to weigh up the benefit in terms of your child socialising, with the cost to their emotional well-being if they are too stressed out to socialise. Finding an after-school activity that is very relaxed, where they aren't forced to join in and can mingle with other neurodivergent children might be a good compromise.

Recognising and Regulating Emotions

Extensive research has been conducted into models and strategies that can help understand dysregulation and find ways to help our children recognise, moderate and regulate how they feel.

Many neurodivergent people struggle to recognise their emotional state and be able to describe it – this condition is known as Alexithymia, which translates into English as “no words for emotions”. For instance, they may struggle to see the difference between being excited (about something good) and scared, as the body reacts similarly to both scenarios.

To help them, it’s important to start by recognising and talking about emotions (you could use the wheel of emotions) Once we understand our feelings, we can start breaking down the situation into smaller, more manageable parts and it is easier to work on navigating tricky social situations and feel more confident in interactions with others.

If you think this is an issue for your child, there are a number of ways you can help, and we have included some useful strategies on the next few pages.

The Wheel of Emotions

American psychologist Dr. Robert Plutchik studied emotions and proposed that there are eight primary emotions that serve as the foundation for all others: joy, sadness, acceptance, disgust, fear, anger, surprise, and anticipation. The wheel of emotions can help identify which emotions you are experiencing in a precise way. Labelling, identifying, and recognising feelings can reduce confusion and uncertainty – it can also help to make sense of stressful situations and start to understand it. Knowing what you are feeling and why, is incredibly empowering. We can start to accept our emotions as we feel them, instead of ignoring, suppressing, or rejecting them.

“It may sound simple, but labelling your emotions can have a positive effect on the power that they have over you, because then you know what you’re facing and whether they are an enemy or friend. When you know what you’re facing, you can learn how to respond. When you are somewhere on the spectrum of anger, you know to take a “time out,” or find a quiet spot to cool down. When you are anxious, you know to practice meditation or grounding. Overwhelming things tend to be so much less overwhelming when you’ve figured out a strategy or a plan to respond to them.”

Two other ways to help your child to recognise and regulate their emotions are the 5-Point Scale and Zones of Regulation. They are based on similar ideas, so it's best to choose which works best for you and then stick with one, or it could become confusing.

The 5-Point Scale

Downloadables – THE INCREDIBLE 5-POINT SCALE
(www.5pointscale.com/downloadables.html)

The 5-Point Scale helps your child to discuss situations they find stressful and gives them tools to deal with their emotions.

5 = This could make me lose control.

4 = This can really upset me.

3 = This can make me nervous.

2 = This sometimes bothers me.

1 = This never bothers me.

Zones of Regulation

A complete social-emotional learning curriculum, created to teach children self-regulation and emotional control, using different colours to represent different emotions. Many schools also use Zones of Regulation as a strategy, if they do, it can be helpful to have a joined-up approach between home and school – www.zonesofregulation.com/index.html

Today I feel...

Happy

Excited

Angry

Sad

Silly

Embarassed

Anxiety

Anxiety is one of the most significant challenges for our children, and the stress-bucket analogy is a helpful way to think about how you can help them to manage and control their levels of anxiety in daily life. Being in a state of high anxiety is often caused by the gradual build-up of worries. A useful metaphor for understanding this is the 'stress bucket' where worries drip into it, one on top of the other, until it overflows and results in extreme anxiety and highly distressed behaviour.

A lot of people experience anxiety, but neurodivergent children are more likely to fill their 'stress bucket' at a much faster rate and more often, due to the many challenges that they experience every day. Sometimes it only needs the smallest of drops to make the bucket overflow – for example, sometimes giving your child the wrong type of cereal, or the wrong coloured cup can be enough to cause a meltdown; it isn't the cereal or cup that has caused the problem; using the analogy of the stress bucket, that is the drop that caused the bucket to overflow.

The stress bucket analogy is a helpful way to think about how we can try to control the build-up of stress in our children's lives – for children already managing a lot of anxiety, their bucket may be close to full a lot of the time. The size of the bucket varies from person to person and can change on a day-to-day basis.

The stress bucket analogy

It can be helpful to spend some time with your child making two lists:

Filling the Bucket - are things which sap energy, or create anxiety e.g., going to school, brushing teeth, trying new foods, seeing relatives or socialising. These may be activities which your child enjoys, but still finds stressful, or emotionally draining.

Emptying the Bucket - are things that replenish energy or make them happy, e.g. having quiet time alone, playing with a pet, reading a book or playing computer games.

You can then monitor the stressful things that have happened to your child each day and make sure they have plenty of bucket emptying activities, to help keep their anxieties under control.

Books on Managing Emotions and Anxiety

For adults:

Avoiding Anxiety in Autistic Children: A Guide for Autistic Wellbeing by Luke Beardon

K.I Ghani has written some very useful illustrated books to help children understand and regulate their emotions:

- **The Disappointment Dragon: Learning to cope with disappointment (for all children and dragon tamers, including those with Asperger syndrome)**
- **The Red Beast: Helping Children on the Autistic Spectrum Cope with Angry Feelings**
- **The Panicosaurus: Managing Anxiety in Children Including Those with Asperger Syndrome**

Emptying the Bucket – these are things that replenish energy, or make your child happy, and could include:

- ✓ Having quiet time alone
- ✓ Playing with a pet
- ✓ Reading a book
- ✓ Playing computer games
- ✓ Breathing - box breathing, finger point breathing, bubble breathing
- ✓ Movement – going for a grounding walk (e.g. barefoot on grass), stretching and shaking
- ✓ Weighted Comfort (toy/blanket/hug)
- ✓ Deep pressure/ massage
- ✓ Music and singing
- ✓ Smells (lavender, peppermint, citrus, vanilla)

Stimming – how your child might regulate themselves or show that they are distressed

Stimming is short for ‘self-stimulatory behaviour’. Many people use stimming as a means of regulating emotions and processing sensory information, but it tends to be more visible in neurodivergent people, as their types of stim and the frequency with which they carry them out, are deemed less socially acceptable.

Some examples of stims that are common to many people are:

- biting the end of a pen
- tapping your fingers or toes when agitated
- twirling hair around your fingers
- biting your lip
- talking to yourself
- stress eating.

How this might affect your child

Stimming can regulate emotions and help us to manage stressful situations. It also helps to process sensory input and provides important clues to you that your child is dysregulated. It acts as a communication tool and a valve to let out excess emotion in a controlled way, whether that is excitement, fear, happiness, or anxiety. If the stimming is stopped or punished the emotions will still be within your child and will come out at a later stage, probably in a meltdown or shutdown. Therefore, stimming shouldn’t be stopped or

reduced, unless it becomes dangerous, e.g. head-banging or other self-harming behaviour, in which case you need to find different ways to help them release their emotions or experience the same sensory input.

Sensory toys such as chewy pencil tops, fidget cubes, putty and squishies, can be kept in a pocket and can help your child to regulate in a controlled way.

If a child is stimming a lot in school, it is a good indication that they are anxious or worried about something. Working with the child and the school to understand what exactly has caused the increased stimming is the best way to help your child.

Some forms of stimming have different names, for example:

- **Echolalia** – this is repetition of another person’s spoken words or repeating the same word over and over again. The sounds can be comforting to your child and/or it can help your child to process the information they have been given.
- **Visual** – staring at lights, spinning objects etc. Repetitive blinking.
- **Auditory** – listening to the same song or noise on repeat, playing with their ears and clicking fingers.
- **Tactile** – touching objects, or rubbing the skin with hands, or scratching/picking at skin.
- **Taste/smell** – sniffing or licking objects or people, binge eating.
- **Physical** – rocking, swinging, jumping, pacing, running, flapping hands, tip-toeing or spinning, chewing on non-food items, or grinding teeth – all of which help release pent up emotional energy and provide connection to the physical world.

“If you see an autistic child flapping their hands because of stress, and your first reaction is to teach them to stop flapping their hands.....what you end up with is an equally stressed autistic child, who is now growing up with one fewer method of communicating that they’re stressed. Address their actual needs first. I’m surprised this is even a discussion”

Chris Bonello,

Meltdowns and Distressed Behaviour

Following these hints and techniques can help manage early signs of distress and prevent your child from reaching a point where they feel unable to cope.

However, even when these strategies are used, there will be times when your child’s “bucket” of stress and challenges fills up faster than it can be emptied. When this happens, your child may still become overwhelmed.

What can this look like?

Shutdown, withdrawal, or freeze: Your child may cover their ears, close their eyes, curl up tightly, hide (for example under a table or bed), bury themselves in your arms, or retreat to a quiet corner of the room.

Flight response: Your child may suddenly run away or attempt to escape from the situation, sometimes without regard for their safety.

Fight response / meltdown: Your child may kick, scream, hit, bite, spit, or throw things. This is sometimes referred to as a meltdown or violent challenging behaviour.

“My son used to bolt all the time. He still does occasionally, but doesn’t go far. We stop the running mostly by letting him know we can see he’s upset, naming the trigger if we know it and telling him we are here when he needs us. Avoid eye contact. Keep speech quiet and calm. Limit words. When he shows signs of calming, we sympathise with him, acknowledging the difficult situation he was in. When we’re out, we always agree on a safe place to go, which is usually back to the car with no one talking. We always let him know that if things become difficult we will leave together. Knowing he has our full support to exit quickly usually means he doesn’t panic.

This works for us.”

Managing a meltdown

Tantrums vs meltdowns

Meltdowns are not tantrums. A tantrum is typically a result of frustration for not getting something that a child wants, it can occur more frequently if a child is tired, hungry or feeling unwell and usually ends when the dispute is resolved. A meltdown occurs when your child is overwhelmed and cannot control themselves. If you get cross or impose punishments your child's behaviour is likely to get worse and the meltdown/shutdown will intensify and last longer.

What does a Meltdown look like?

Managing a meltdown:

- Help your child find a safe, quiet place to de-escalate, for example: "Let's leave the busy shopping centre and sit in the car for a few minutes."
- Provide a calm, reassuring presence without talking too much to your child. The goal is to limit sensory overload.
- Sometimes the reaction from other people can add to the stress of the situation. It can be helpful to carry awareness cards to quickly explain your child's difficulties to by-standers: www.autism.org.uk/shop/products/merchandise/alert-card
- When a child is having a meltdown, they find it very hard to process and understand what you are saying and doing, so keep actions and communications short and clear and prioritise safety.
- This is not the time for a reasoned discussion – that can come later when they have calmed down.
- Encourage deep breathing.
- If your child likes physical reassurance, give them a hug.
- Try to get them to a 'safe place' such as their bedroom, a dark den or other place where they feel comfortable.
- If the child responds well to swinging, encourage calming rhythmical movement.

"When I see my son upset I feel start to feel panicky too, especially if he is behaving dangerously towards himself or someone else – it has taken practice but I know that I have to keep calm myself and be the one to help him calm down – but once the urgency of the situation has passed, it can take hours, and sometimes days for me to really recover."

After a meltdown

- After a child has had a meltdown, they are likely to feel exhausted – give them time and space to calm down. The feeling of losing control can be traumatic for children – this may leave them feeling embarrassed or scared. You might be feeling embarrassed, scared, angry, or anxious too – so be sure to give yourself some quiet time to decompress.
- When your child is feeling better, follow up with a sensory activity that you know they will find calming, for example:
- Heavy hard work such as pushing a wheelbarrow or shopping trolley;
- Resistive sucking/blowing/chewing...such as blowing bubbles or eating a chewy snack or sucking a smoothie through a straw;
- Continue to keep the environment quiet and calm for a while.
- Also recognise that you may be feeling upset and exhausted after supporting your child through a meltdown. When you can, take some time for yourself to recover.

“It took me a while to understand that they are not being defiant, they are overwhelmed and upset. Don’t take it personally and definitely don’t join in - it will make it 10 times worse and last twice as long.”

Further information

There are lots of theories and research about emotional regulation and heightened anxiety and fight/flight/freeze responses in neurodivergent people. If you are interested in finding out more we would recommend the following:

- What is the polyvagal theory? - <https://therapist.com/brain-and-body/polyvagal-theory>

Yvonne Newbold supports parents and professionals to reduce violent, difficult and dangerous behaviour in children and young people with a disability and/or additional needs.

- www.newboldhope.com

After School Restraint Collapse

Children who mask at school become ‘wired and tired’ because they use a lot of cognitive energy to maintain control throughout the day.

School can tire neurodivergent children out mentally. Children feel most relaxed and home is often the best place for them to unwind and express themselves in a safe and relaxed environment.

Your child might feel mentally drained, making concentrating and returning from challenges harder. This is sometimes known as cognitive load.

1. Avoid immediately asking your child about their day. Offer a snack and drink.

2. Encourage your child to regulate by having quiet time alone with their thoughts. Avoid engaging in lengthy conversations or making demands.

3. Let your child decompress at the end of the day and allow them to take charge of when and how they want to interact.

Some children prefer to decompress through physical activities such as trampolining, wrestling, running around outside, or riding bikes.

What might it look like?

- Refusing to do as asked.
- Absorbed in computer games (this often isn’t a bad thing – this may be their way to relax).
- Throwing, ripping or breaking things around the house.
- Falling asleep at dinner.
- Extreme emotional responses .
- Too tired to do homework.
- Being quiet or withdrawn.

How can we help at home?

- Use simple language.
- Avoid immediately asking your child about their day.
- Offer a snack and a drink.
- Allow time for processing and self-regulation.
- Encourage your child to regulate by having quiet time alone with their thoughts.
- Avoid engaging in lengthy conversations or making demands.
- Create space for them to relax.
- Some children prefer to relax through physical activities such as trampolining, wrestling, running outside, or riding bikes.

Understanding Executive Function and Cognitive Load

What is Executive Functioning?

Executive functioning is a set of mental skills that help us process, organise, and remember information. These skills allow us to:

- Think and plan ahead
- Organise tasks and belongings
- Time management
- Control impulses and emotions

What is Executive Dysfunction?

Executive dysfunction is when there are difficulties with these mental skills. This can make everyday tasks more challenging for children and adults.

People with executive dysfunction may:

- Misplace important items like homework, reports, or personal belongings
- Struggle to prioritise tasks or meet deadlines
- Have trouble managing time effectively
- Find decision-making stressful or overwhelming

"I explained to my son that his brain works like an air traffic control tower. When too many planes try to land at once, things get confusing. That helped him understand why he feels so overwhelmed sometimes'."

Supporting Executive Function in neurodivergent young people

Neurodivergent young people often have less developed executive functioning skills than their neurotypical peers. Challenges are not due to lack of effort or intelligence, they reflect neurological variations that make certain cognitive processes slower or less automatic.

Activities to help with time management:

- Helping with chores that involve sorting and categorising, like putting away dishes, matching and folding laundry, storing groceries, etc.
- Writing weekly, monthly, and even yearly plans can help children visualise abstract concepts like time.
- Use things that ding! This includes timers, phone apps, watch alarms, clocks, etc.
- Posted schedules, especially those with eye-catching visuals or colours.
- Daily whiteboards: Encourage your child to jot down the month, day, day of the week and year, and also include any events that are coming up or have recently passed. It's a fun way to help them practice their writing skills and keep track of important dates.
- Time estimation games: how long will it take to drive to the supermarket?
- Learning a musical instrument.

Activities to help with Planning & Problem-Solving:

- Rubik's Cubes
- Brain teaser puzzles & logic problems
- Strategy-based board games (Battleship or Chess)
- Geocaching and/or orienteering
- Scavenger hunts

Activities to help with Attention:

- Yoga
- Martial Arts
- Dancing
- Jump rope games
- Hide & seek
- Laser Tag
- Learning a musical instrument
- Reading books like I Spy

Activities to help with Working Memory :

- Matching card games
- Singing in a choir
- Guessing games
- Hand clapping games (pat-a-cake, a sailor went to sea sea sea, B.i.n.g.o. etc.)

"I felt terrible when I found out that neurodivergent children can be less emotionally mature than their peers. When my son started secondary school, I expected him to manage the bus, cope with all the changes, and remember his equipment. He just couldn't, and mornings were so stressful. Once I realised this was normal for him and gave extra support, everything became easier — I only wish I'd known sooner."

Here are some other approaches which may help:

Pomodoro

Use the Pomodoro Technique

The Pomodoro Technique helps you to sustain focus for short blocks of time, so that large tasks are made more manageable.

You can adjust the timings to better suit your child's needs.

Body Doubling

Use 'Body-Doubling' to help them get started with a task.

Body-Doubling is the act of doing something at the same time as your child or simply being physically present while they are doing a task. This can really help children who struggle with tasks that they find under stimulating, or something that they don't want to do.

Moving from one task to another

If your child has difficulty stopping an activity they are enjoying, it helps to give them frequent warnings that the activity is going to come to an end. You could use a visual timer, but sometimes they will need more if it is something they particularly love and they may not even realise you are talking to them and giving them a countdown. In this case sit with them and ask them questions about what they are doing. This will gradually bring them out of their hyper-focused state and back into the “real world”. You can then say to them that they only have a limited amount of time left on that activity. It is a much gentler way of bringing them out of their intense focus.

Gaming

If your child gets engrossed in computer games, it can help to learn a bit about the specific games your child plays. Some games can be saved immediately, some can only be saved at a certain point, and many on-line based ones often can't be saved at all and may instead work as separate rounds or games and involve teammates.

Your child may react badly to being asked to leave an on-line game immediately, as they could be letting their team down, or they might be about to win! Try to use the right terminology with your child when asking them to finish their game, so that they understand when to turn it off.

“You have to enter their world for a little while, in order to help them to leave it.”

What is Cognitive Load?

Cognitive load is the amount of information that our brains can process at any one time.

What is cognitive overload?

Cognitive overload occurs when there is too much information or too many demands on working memory. It happens when you handle multiple tasks, complex information, or deal with new technology, or for our children if they have to concentrate at school all day, undertake a new activity or visit a new place.

These main causes can be broken down into the following:

- **Multitasking** - Trying to complete several tasks simultaneously can make us less productive. Our brains can struggle to switch between tasks when we multitask.
- **Information overload** - Being overloaded with the fast pace of the curriculum and daily academic activities at school, or receiving too much information through emails, social media, and digital channels
- **Poor time Management** - When our children have difficulty managing their time, they might put off important tasks, making them feel anxious and overwhelmed. This often happens when they don't have enough time to complete things or if there's a deadline coming up.
- **Complex tasks** - Learning complex or challenging things can take time, and sometimes it can be overwhelming.

It's important to remember that every child has different abilities and may require additional support at home and school. To make learning more accessible for them, we should use simple and familiar language, keep sentences short and direct, and prioritise the most important information.

Social and Communication Differences

Literal language

Neurodivergent people tend to communicate directly, interpreting language literally. This means that even if you use slang or make a joke, they might take your words literally. Similarly, if you use approximations, like saying "Give me a minute," they may not understand that you mean "I'm almost ready, just wait a little while." This can be confusing, and they may think that you want us to literally give you a minute, or start counting from 1-60 seconds, expecting you to be ready at the end of the count.

To avoid this, it's important to check understanding regularly to ensure that your child knows what you mean.

This can also be a trigger at school, if a teacher doesn't explain something clearly and your child misinterprets a request and does the opposite.

We've included some examples below that parents have shared with us. Although they are amusing in hindsight, at the time our children can become very upset that they have been told off and don't understand why – when in their minds they did what they were told.

"Jump in the car"

"Run the hoover around the house"

"Throw me my bag"

Social Stories and Comic Book Conversations

Social stories were created by Carol Gray and are a useful tool to help explain a new social situation or activity in a simple, visual way. They can be personalised to the interests of each child and can be presented in a logical, literal way and help to take away some of the child's anxiety around new experiences.

Comic strip conversations can be a fun and helpful way for neurodivergent children to understand complex social situations. Parent Carers or adults supporting your child can use drawings and visual aids; these conversations can make learning about social situations much more enjoyable and engaging.

Further information

- Social Stories - Home - Carol Gray - Social Stories (<https://carolgraysocialstories.com>)
- Helping autistic children & adults make sense of the social world - www.siobhantimmins.uk
- Social stories and comic strip conversations (www.autism.org.uk/advice-and-guidance/topics/communication/communication-tools/social-stories-and-comic-strip-conversations#What%20Are%20Social%20Stories%20for?)

"I am friends with my child's teacher and we laugh about the time that she asked the class to sit down. Everyone else sat on their chair but my son sat straight on the floor. Luckily, she knew him well enough to understand that he wasn't being cheeky - he just hadn't understood what she wanted him to do."

If you are asking your child to do something for you, don't phrase it as a vague question, as they will think it is optional, rather than non-negotiable. They aren't necessarily being rude, they are just giving you an honest answer!

"Would you like to tidy your room?"

"No!"

Social skills

Teaching your child social skills and the secret social cues/ rules that exist, but are rarely spoken about, can be really helpful. Some children need to be taught even the most basic social rules:

“My child had to learn every unwritten social rule - for example that when you speak, the other person needs to know that you are speaking to them, and to be able to hear what you are saying. My son spoke to the back of his friend’s head when he had his hood up and the other child couldn’t hear him – my son got upset because he thought he was being ignored. When I explained that his friend needed to be able to see and hear him, he learnt this new rule - but I have to explain each individual variation to him. It must be really hard for him - like learning a new language.”

Role-playing is an effective way to teach social skills. It allows your child to practice social skills in a safe and controlled environment. You can create scenarios that your child may encounter in real life, such as asking for help or joining a conversation, and then let them practice in a fun and supportive way.

Recommended reading for teenagers

- **The Asperkids’ Secret Book of Social Rules** by Jennifer Cook O’Toole

You can try a few things if you’re looking for ways to help your child and feel more confident about starting conversations. First, encourage them to really listen to what others are saying and to ask questions about their interests and experiences. This will help them develop a genuine interest in others and make finding common ground easier. You can also help your child practice initiating conversations by using conversation starter cards.

Info dumping

Info dumping is a neurodivergent trait where your child will get really excited about their special interests or specific topics and tend to share a lot of information about them during conversations which others may find boring. It can be helpful to explain to your child that not everyone shares the same interests that they have. People with similar interests maybe happy to discuss the subject at length, but other people can become annoyed.

It is important to bear in mind that your child will have their own natural way of communicating and socialising and this is equally valid.

✓ Top tips

- ✓ **Make friends** - seek out other SEND families at your child’s school or in the area – there are often SEND-specific times at play centres or inclusive activities. Your child is likely to have particular interests they love – find other children with similar interests and encourage those friendships.
- ✓ **Visit social events tailored to neurodivergent children** – this relieves the pressure on our children to conform to neurotypical behaviour. Often, children may hide their natural behaviour, like stimming, being anxious about joining activities or struggling with sensory overstimulation. Inclusive activities and events offer a safe space for children, young people and families to be themselves without fear of judgment or discrimination.
- ✓ **Ask school to help** - if your child struggles to make friends at school, you could ask the school to help. They could introduce them to other children who feel isolated, organise some social groups at break or lunch and generally help with social skills.
- ✓ **Maintain friendships** – “Out of sight, out of mind” can be a problem factor for neurodivergent minds. You will probably have to act as your child’s social secretary, arrange play dates, and remind them to contact their friends on weekends and during the school holidays.
- ✓ **Quality, not quantity** – choose your people! Remind them that they don’t need to be friends with everyone.
- ✓ **Types of friendship** – teach them the difference between an acquaintance, friend and best friend. Some children will think they don’t have any friends, but they do!

Double empathy problem

Part of the current diagnostic criteria for autism is having a lack of empathy and/or interest in others e.g. finding it hard to see something from someone else's point of view or thinking that everyone has the same interests and values as you, this is known as Theory of Mind differences.

This theory has been challenged, by extensive research carried out by Dr Damian Milton and others, who have developed their own theory called the Double Empathy Problem, which states that the lack of empathy for others goes both ways and that many neurotypical people struggle to understand neurodivergent thought processes and ways of communicating and therefore try to change the neurodivergent person, to become more like them, rather than accepting the difference. You can read more about it here: Milton's 'double empathy problem': A summary for non-academics | Reframing Autism <https://reframingautism.org.au/miltons-double-empathy-problem-a-summary-for-non-academics/>

These theories are all well and good, but what does this have to do with your child's difficulties? The Double Empathy Problem is at the heart of the neurodiversity affirming movement – encouraging acceptance of differences, rather than pressurising everyone to think, socialise, communicate and behave in the same way. Spreading awareness and acceptance and dispelling some of the myths associated with neurodiversity will make a difference to how society views it and hopefully provide our children with a future where they feel different not less.

Neurotypical people usually share the same communication style and understand their social rules.

Neurodivergent people usually share the same communication style and understand their own social rules.

But when they try to communicate or meet socially there can be a lot of misunderstanding.

In the past neurodivergent people have been told that their ways of thinking and communicating are wrong and they should learn to be more neurotypical - but it would **benefit everyone** if both NTs and NDs would learn to understand each other.

You may also find that your child may have heightened empathy and be acutely aware of every perceived difference and social difficulty that they face. This can also have a harming effect on their wellbeing.

Vulnerability to exploitation

Increased risk-taking and anti-social behaviour sometimes occurs during adolescence, usually spurred on by friends and peers.

The fear of being socially excluded for most teenagers is the worst thing ever in their minds, and it may seem as though they value their "friends" above the concerns of their family. These social pressures are increased further for our neurodivergent young people, who struggle to make and keep friendships at the best of times and often feel socially isolated.

This need for friendship at any cost and difficulty reading other people, may make them vulnerable to being exploited by others and led astray. It is important to pay attention to who their friends are, where they are going and what they are doing and to teach them how to recognise manipulative behaviours in others.

If you witness real-life examples of coercion or manipulation, or spot them whilst watching a TV/film together, point them out to help your child to recognise the signs.

Section 10

Growing Up Neurodivergent

The Teenage Years

Our children can often find the teenage stage an extremely difficult time.

- They often struggle to interpret or engage in more complex relationships with their peers. Friendships from primary school can begin to falter as they change school and undergo puberty.
- At home, our children may still need help with daily activities even though they desire independence.
- **And**, demands are increased as they move to secondary school.

Puberty and Body Changes

Puberty is a time of physical change which many of our children find difficult and some will not want to accept that it will happen to them at all.

You will best know how and when to approach discussions about how their body will change as they get older.

It can be beneficial to normalise it by talking about changes from as young an age as possible. You don't need to mention sex but can start to point out that as they get older they will get taller, hairier and their body will change. You can add more detail as they mature. You could introduce the topic by showing them that most things change over time, including plants and pets. Point out that the change is a slow process, so they aren't scared that they will wake up one day and discover that they have turned into an adult overnight!

Top tip

- ✓ Some children will, point blank, refuse to discuss the subject, and in these cases it can help to leave an age-appropriate book lying about the house which might make them curious!

"My daughter absolutely refused to talk to me about growing up, whenever I approached the subject she became angry and upset. I bought a book and left it in her room and noticed that she had been reading it. I also told her that she could text me if there were things that she found too difficult to talk to me about, and when her periods started she did this and it worked really well for us."

Periods

Top tips

- ✓ Try and establish a way to talk to your daughter about what will happen;
- ✓ Prepare an emergency period pack for school, as periods are often irregular and unpredictable and it will give your daughter peace of mind to have everything to hand. To avoid embarrassment, try to make the pack as small and discreet as possible.
- ✓ Liaise with the school and consider asking for a toilet card that they can show the teacher, to allow them to leave class.

Lots of sensory issues can be triggered by sanitary products. It is worth trying out a variety of products. Period pants are a great option for lots of girls, so they are definitely worth a try.

Further information

- The Autism-Friendly Guide to Periods by Robyn Steward

Personal Hygiene

Developing self-care skills such as shaving and personal hygiene can be difficult and sensory differences can make these tasks uncomfortable. Many may have to be convinced of the need to develop good personal hygiene habits!

Top tips

- ✓ If deodorant from an aerosol is too much of a shock on the skin, try a roll-on.
- ✓ Triggers - Try to identify triggers that may be causing problems, for example you may need to change a shampoo or shower gel brand.
- ✓ Involve your child in selecting their own toiletries, finding textures and smells that they like, or which are unperfumed.
- ✓ Tell them how important it is to keep clean – you can use their special interest to help with this – e.g., if they like logic and fact then explain how bacteria can be harmful. If they are sociable, tell them other people may not want to be around them if they smell unpleasant.
- ✓ If your child does not like the sensation of water on their skin in the shower, encourage them to take a bath.
- ✓ If you use a visual timetable or break down hygiene tasks for your child, (refer to the section on day to day life) remember to update this to include the additional tasks that will need to be included as they are growing up.

Supporting your child to access their GP

Knowing when you or your child can give consent for GP care can feel confusing.

Here's a simple guide to help understand how decisions are shared as children grow up:

- When your child is 13, they may be expected to give their own consent for how their data is used within health services, e.g. booking their own appointments and viewing online records
- At 16, they can talk to the GP on their own and discuss their treatment options.
- At 18 they are legally considered adults and you will need your child's permission to continue to be involved in their care. They can also choose whether their GP shares information with you.

If you want to support your child as they reach these milestones, you can speak to their GP practice to request the forms needed for you to continue to advocate for them.

You can also help your young person build confidence when speaking to the GP by practising what to say, writing notes in advance, and reminding them it's okay to ask questions, take their time, or say, "I don't understand" or "please can you explain that again?"

Consent and medical decisions

When a child turns 16, they make their own medical decisions if they choose to do so. Parents can still be involved if the young person gives consent. The best way is for the child to sign a short written statement allowing the GP to share information and discuss their care with the parent.

It's also okay if your child wants you to do most of the talking. Many neurodivergent young people find appointments overwhelming or hard to process in the moment.

Ways to support your child's choice:

Your child can say: "I'd like my mum/dad/carer to speak for me."

They can write it down or take a simple card with them that says: "Please talk to my parent/carer about my care."

Some children prefer you to explain their concerns first, and then they add in anything they want to say afterwards.

Others may want you to stay quiet during the appointment but be there for reassurance.

The important thing is that they know they have control: they can choose to speak, to let you speak, or to do a mixture of both.

Health and Medication

It's quite common for teenagers to push back against taking prescribed medication – for a number of reasons; they don't like being told what to do, don't like being seen to be different, are in denial about their condition or don't like the side-effects. Keep an eye out for this as it can be dangerous to suddenly stop some medications. It is important to be sure your child understands and accepts their diagnosis. Explain to them why the medication works but validate their feelings about taking it. You could talk to your GP/paediatrician to find out if a medication “holiday” would be possible so that you and your teen can assess the impact or see if a different medication may work better and have fewer undesirable side-effects.

“It was a heartbreaking time for me, watching my teen struggle in school and missing career opportunities as he exercised his right to not want to take medication. After being off the meds for a while he realised the benefit.”

Developing Relationships

For children who already find social situations difficult, there are additional challenges as they grow up and become more independent, and you aren't around as much to support them. They may:

- Prefer to spend time on their own, rather than with their peers and family.
- Have trouble understanding the social rules of teenage friendships.
- Make social mistakes like invading personal space.
- Have trouble relating to children of their own age, preferring to spend time with younger children or adults.
- Give in to peer pressure without realising the consequences.
- Become a target of bullying due to poor social and communication skills.

Are they my friends?

Do they like me?

I don't know why they said that to me

- They may not understand what is acceptable ‘banter’ or teasing and what can be construed as inappropriate sexual or racist language, and what they should not accept being said to them.
- The ‘dating game’ can also be hard to interpret, and they may not always pick up on cues or misinterpret them.

Sex Education

Health education, including learning about relationships (for primary children) and relationships and sex education (for secondary pupils) is statutory in schools so young people at school should be receiving lessons that are age appropriate and differentiated. The sex education forum has lots of useful resources which you may find helpful, particularly if your child does not attend school.

Top Tips

- ✓ Give them their own space but try to ensure they don't retreat from family life altogether. Set aside some time together every week to do something fun and relaxing. Make sure you involve your child in the planning. You could even set a budget and let them organise the whole thing, to help with their executive functioning skills.
- ✓ To encourage your teen to talk to you, sometimes it's easier to talk to them while they are engaging in an activity they enjoy, like walking the dog, or speaking to them while you are driving in the car, this way the focus is not on them, and they aren't having to make eye contact.
- ✓ Pick your battles - take a stand on the important issues. Recognise and be alert to the important risks for teenagers, for example, internet use, social media or peer pressure – but be prepared to compromise on matters that are less important. This can help to show your child that you value their opinion and what they want to do.
- ✓ Allow them to make mistakes and help them to learn from them. Teenagers have to learn about the consequences of their behaviour - this is the beginning of learning adult responsibility. However, a neurodivergent teenager may make more mistakes before the lessons are learned so may need additional support.
- ✓ Use lots praise and try not to criticise every little thing they do wrong, as many of our children already have low self-esteem. Some children dislike being singled out and given praise, often because they don't feel they deserve it.
- ✓ Try and find clubs where there are other neurodivergent teenagers or find opportunities for them to volunteer to help build confidence.
- ✓ Find out if there is a neurodivergent or Autistic Pride event near you and if they would like it, take them along.
- ✓ For those that like gaming, invite other teens they play on-line games with to your house for a gaming night.
- ✓ Encourage them to follow young neurodivergent bloggers/ writers on social media to increase their exposure to positive role models.
- ✓ It is an important part of growing up for your child to make their own friendship choices. Your son or daughter might have experienced difficulties making friends in the past, therefore, support them now by encouraging friendships and helping them to maintain them. Accept their friends but be aware that your child may be easily led or taken advantage of, so get to know the people they are mixing with.

"On the rare occasion that your teen comes to you to talk, drop everything to spend time with them."

- ✓ Support their independence. This might be hard for us as parents, but it is essential that you raise your child to become as independent as possible. You can try:

- ✓ Giving your child a role or a regular job;
- ✓ Reducing the instructions you give;
- ✓ Providing time and space for your teenager to work out how to do the task for themselves.

Whatever the result of this, recognise the effort.

- ✓ Respect their privacy. Every teenager needs their own space.
- ✓ Do not punish the behaviour you want to see.

"I have made a really conscious effort to change my behaviour towards my son. It's so tempting to still be annoyed or sarcastic when you ask 10 times for him to do something and he finally does! I used to say 'thanks for joining us at last' or when he finally brings down the plates from his room, I'd say 'Great, I've only asked you 5 times to do that!' But changing the way that I speak to him and encouraging him when he does do something positive has made him a lot less resentful towards me and keener to help. He said 'I felt I was being punished when I didn't do something, and would then be punished again when I did - I couldn't win.'"

Developing a positive identity

- For many neurodivergent children, emotional development and regulation can be delayed by two or three years, and doesn't tend to even out until their 20's. However, being a little emotionally immature doesn't affect intelligence.
- Growing up, neurodivergent children may be criticised and have a sense of not fitting in. As a result shame often forms a large part of their upbringing and can affect their self-image and self-esteem.

What you can do to help:

- Assume competence. Many parents worry about their children but it can help their esteem and confidence if you start from a place of thinking that your child can do something. You may find that what you assumed they couldn't do, they actually can, but in a way you wouldn't have thought of.
- It is important that they develop an understanding of why they may behave a certain way and you can support them in learning how to explain their neurodivergence to other people. This may help reduce feelings of shame for being the person that they are.
- Having a strong personal identity and feeling proud of who you are is one of the key factors that can help protect a child's mental wellbeing and develop resilience.
- Emphasise the positives and the things that they can do instead of the things that they find difficult.

Books for Young People

Neurodivergent Social Media - please note some of these may not be suitable for under 15's

(there is a more comprehensive list in the [Useful Information Section](#) at the end of this pack)

- **Emily@21andsensory** (www.21andsensory.wordpress.com) – autistic blogger/graphic designer who also has sensory processing disorder
- **Dean Beadle** (www.facebook.com/dean.beadlespeaker) – Autism Advocate, highly entertaining public speaker, LGBTQIA+, singer, Dr Who fan.
- **Rene Brooks** (www.blackgirllostkeys.com/rene-brooks/) – ADHD Blogger and Advocate
- **Lauren Melissa** (www.instagram.com/autienelle/) – Lauren chronicles her life as a woman on the autism spectrum, on Instagram, providing #Autietips along the way.
- **Paige Layle** (www.instagram.com/paigelayle/) – an autistic advocate who posts on Tik Tok and Instagram. Layle offers a lot of insight into neurodiversity and can help anyone gain more awareness of the misconceptions they might have about the autism spectrum.
- <https://jennhasadhd.com>

Neurodivergence and LGBTQIA

(Lesbian, Gay, Bi-Sexual, Transgender, Queer/ Questioning, Intersex, Asexual)

According to a **number of studies** (www.sparkforautism.org/discover_article/autism-lgbtq-identity/) neurodivergent people are 2-3 times more likely to be LGBTQIA and this figure is higher amongst females than males.

Throughout their childhood, it is important to understand your child and to create an environment where they can talk to you about difficult topics so that you can help. If they don't find it easy to discuss, it doesn't mean that you have failed, it's just that this can often be a difficult topic for young people.

It is worth doing a bit of research to be informed, so that if your child has questions you are able to discuss this with them.

Sometimes being neurodivergent and LGBTQIA is referred to as being "under the double rainbow".

www.twainbow.org is an autistic led charity for those who are both autistic and LGBTQIA.

"If you teach your children nothing else, please teach them that who they are is good enough and worthy of love. Teach them that no matter what the bullies say, the world has a place for them just as they are. Teach them about different identities and why it's okay to not fit in with the mainstream. Most importantly, teach them to love themselves"

by David Gray-Hammond
(<https://emergentdivergence.com>)

16 and Beyond

Planning for life after school should be considered early to help the support and planning needed for a successful transition into life beyond education.

Schools should start providing careers education, information, advice and guidance from Year 8 onwards to help young people explore future pathways and make informed choices. For those with an Education, Health and Care Plan (EHCP), annual reviews from Year 9 onwards must include Preparing for Adulthood (PfA) outcomes, focusing on areas such as employment, independent living, community participation and health.

Under the SEND Code of Practice (0–25 years), support for young people with an EHCP continues beyond the age of 16 and can remain in place until they turn 25, provided they stay in education or training and the plan is helping them achieve their agreed outcomes and make progress. This includes further education, supported internships, and apprenticeships, but does not cover higher education — so if a young person moves into university from age 18, their EHCP will cease.

“My son really struggled in years 7-11 and honestly hated school. He decided to go to sixth form at the same school, only really because he didn’t know what else to do! However, sixth form really suits him. He no longer has to wear a uniform and gets scheduled free periods /study breaks where he can complete his homework, and he is studying only the subjects that interest him.”

Local services

Other education providers and charities helping with the transition to adulthood

- **ACL** - offer numerous support services to help ongoing education to be accessible. This includes lots of inclusive practices and they can work in small groups. <https://www.essex.gov.uk/jobs-and-apprenticeships/adult-courses-and-learning/adult-community-learning>
- **Hamelin Trust** - Can support at home, in their centre and or support into employment - for example they run their own cafe. <https://hamelin.org.uk/>
- [Seetec.co.uk](https://seetec.co.uk)
- Essex Youth Service <https://youth.essex.gov.uk/>
- Courses and learning for over 18s: send.essex.gov.uk/advice-young-people/courses-and-learning-over-18s
- ECL Inclusive Employment – a supported employment service free to anyone over 18 with a learning disability and/or autism, living in Essex. www.ecl.org/refer-to-inclusive-employment

If your child is going to university, check if they are eligible for Disabled Students' Allowance www.gov.uk/disabled-students-allowance-dsa

What help is available?

Support is available to young people with special educational needs and disabilities, providing clear information, advice, and guidance about their future options. The help available varies depending on where you live.

Living independently

Higher education

Employment

Contributing to society and the local community

Friendships and social life

Physical and Mental Health inc. diet and exercise

Local services

- Essex - The SEND Careers Advice Service , previously known as the Preparing for Adulthood Team - <https://send.essex.gov.uk/search-support-groups-and-activities/send-careers-advice-service>

There is a SEND Careers Advisor in each of the four quadrants of Essex:

- Mid Essex (Braintree, Chelmsford, Halstead and Maldon): Emma.burley@essex.gov.uk 03330 131421
- North East Essex (Colchester and Tendring): Richard.davies@essex.gov.uk 03330 321641
- South Essex (Basildon, Billericay, Brentwood, Castle Point, Rochford and Wickford): Kerry.surridge@essex.gov.uk 03330 131424
- West Essex (Epping, Harlow and Uttlesford): Bojan.stankovic@essex.gov.uk 03330 321984
- Southend – Preparing for Adulthood Team www.livewellsouthend.com/preparing-adulthood/southend-preparing-adulthood-teams
- Thurrock – Preparing for Adulthood Team <https://www.askthurrock.org.uk/kb5/thurrock/fis/advice.page?id=mJi3RPx4l6g>

Support is available to young people aged 14 to 25 who have an Education Health and Care Plan (EHCP) or Higher Needs Funding. If your child has an EHCP, their advisor or a member of the SEND team will write to them in Year 8 to introduce themselves, and from Year 9 become more involved to explore pathways and opportunities.

Whether or not you have a SEND Careers or Preparing for Adulthood Team information should be provided covering the following options:

For 16+ (Years 12-14)

- A Levels
- T Levels
- BTEC Qualifications
- Supported Learning including Supported Internships, Apprenticeships (including Foundation and Accessible), Volunteering, Foundation Courses

For 18+ (Adulthood)

- Further Education (FE)
- Higher Education (HE)
- 18+ Apprenticeships
- Employment (including Supported Employment)
- Volunteering

For young people with an EHC Plan moving from secondary school to a post-16 setting or apprenticeship, the review and any amendments to the EHC plan (including specifying the post-16 provision and naming the college, etc.) must be completed by the 31 March in the calendar year of the transfer.

Further information

The Essex Family Forum is a well-informed, connected and empowered community of families that includes children and young people up to the age of 25 with disabilities or additional needs. We work in partnership with organisations, our Local Authority and health commissioners aiming for quality outcomes that meet the needs of all our families. We are also part of the Eastern region (ERPCF) and national network of parent carer forums (NNPCF).

www.essexfamilyforum.org

This guide is distributed with the support of the Essex Alliance - the Parent Carer Forums of Essex, Thurrock and Southend.

STRM - SEND the Right Message is a registered charity founded by parents for parents. We help improve the quality of life for families in Southend and Essex where a child has been identified or is suspected of having specific educational needs and/or disabilities. Our support services are designed to provide comprehensive and holistic assistance to families. We provide families with information and guidance from pre-diagnosis, 'while you are waiting', post-diagnosis, including financial assistance and social activities.

www.strmsupport.co.uk

MyOTAS (My Own Time And Space) is a registered charity, run by parents to support families in Essex.

We are passionate about improving the lives of Neurodivergent children, young people and their families. We provide:-

Inclusive Activities for neurodivergent children, tailored to their particular needs, in a non-judgemental and low-pressure environment.

Family Support via in person and on-line groups, email, phone, 1:1 meetings and workshops

Training and consultancy services to the wider community to promote inclusion and acceptance of neurodiversity

Your child does not need a diagnosis to access our services.
